Thread: [XRPC Tool In VB.NET \[Video + Source Download\]](#)

**Shoot** - January 2, 2015, 2:48 pm

Credits To Corios For Help I Needed

## Introduction

So with a little time i got XRPC's to work in vb.net. I did this because its something different, and yes it is working, This should make it extremely easy for new XRPC programmers to code their tools.

## Video

[Video: <https://www.youtube.com/watch?v=v637MU6dS9A>]

## Current Code

Code Imports XRPLib

Imports XRPCPlusPlus

Imports XDevkit

Public Class Form1

Dim Jtag As New XRPC()

Private Sub Button1\_Click(sender As System.Object, e As System.EventArgs) Handles

Button1.Click

Jtag.Connect()

If Jtag.activeConnection Then

MsgBox("Connected!")

Else

MsgBox("Unable To Connect")

End If

End Sub

'HF: Shoot

Private Sub Button2\_Click(sender As System.Object, e As System.EventArgs) Handles

Button2.Click

If Jtag.activeConnection Then

Jtag.Notify(XRPC.XNotiyLogo.FLASHING\_DOUBLE\_SIDED\_HAMMER, "Created By Shoot")

Else

MsgBox("You need to connect first")

End If

End Sub

End Class

In the current code you will see there is another button, i just added a poke xNotify to the project

Make new people code XRPC tools in vb.net.. really? All you did was connect.. They wont know how to do anything but that, they wont be able to call anything lol & I swear XNotify with XRPC

doesnt work anymore lol Sure you need JRPC

**+Haze** - January 2, 2015, 4:06 pm

I feel for OP, every thread he makes, he gets roasted. Wow. But these people do have a point, but still.

You sure? Why when I tested myself personally, does it never work? Hmm

i dont know, it always works for me and ill i do is code XRPC & JRPC tools for people. XRPC is easier to code, but JRPC is a little harder but more stable.

XRPC is easier to code, but JRPC is a little harder but more stable.

+ if you aren't adding any actual function to do anything than connect, why are you, if you actual code XRPC tools knowing that people dont even use 80% of tools released, releasing it? Pointless, just saying.

So basically you managed to compile a DLL and reference it in a project... Congrats m8 ?
