Thread: [Watch porn and feel at ease at the same time! Watch Porn Safely! Never get caught!](#)

Drizzy?? - January 3, 2015, 5:07 pm

Hey guys, I have create a porn browser specifically designed to NOT get you caught fapping. This is just a joke but some of you may find it useful ?

Features:

Voice Recognition: Hear someone walking down the hall? Simply say "done" and it will execute a command of your choice (see screenshot).

Exit Button: The biggest issue with watching porn when you're parents are home is exiting and covering up your shlong fast enough, well this button puts you at ease. A very easy target to click instantly terminates the program.

Motion Detection: Point your webcam at your door and when it detects movement, it will close down! GG mom.

Hotkey: Press escape to close the program instantly

Clear History Button: Self Explanatory

Future Updates:

None that I can think of

Holy shit, I see this program getting huge, nice work bro.

?Marshm allow - January 3, 2015, 5:09 pm

This is hot. I will have to use this. Thanks Drizzy. Never fail to make the best programs ;)

Absolute Greatest - January 3, 2015, 5:09 pm

Vouch, this seems actually like a pretty cool program tbh

+Haze - January 3, 2015, 5:10 pm

I'd like to see the source code for this should be interesting...

It's a simple web browser with a button that closes the program is what it looks like at first glance.

I could code you one in VB.net quite quickly if interested sir ?

In regards to the OP, Thanks for helping the community!

Last time I checked, no one watches porn using Internet Explorer. Lool. And no I certainly don't need your code.

May I ask why you would need proxies? Unless your family sniffs your network packets.

Wait a minute. Go open your IE history. Ooooppps.

(Jan 3, 2015 07:17 PM)Electroalek Wrote: [\[CITE\]](#) Wait a minute. Go open your IE history. Ooooppps. Yep, I realized I shouldn't use the web browser function, working on something else.

Weakky. - January 3, 2015, 6:33 pm

You could just use Process.Start() to start the default browser, and then have your app kill the browser launched using a shortcut, that would be much much more efficient.

Your application would be smaller in width/height, and that would make it more professional.

That would let porn history on the browser though.

Deathmaul - January 3, 2015, 6:35 pm

Wow! This is awesome. I will check it out right away.

Thanks for letting us know about it and I think many people will find it useful.

Haha on the porn though.

SirenNinja - January 3, 2015, 6:54 pm

I don't know why, but right when I saw "porn" in the title, I just couldn't stop laughing. I didn't think anyone would really want to release something like this. XD.. Great work though. :D

goners - January 3, 2015, 7:36 pm

My wife will wonder why I am yelling exit to the PC every time she walks in the room. LOL going to see what this can do thank you for the free porn.

Why wouldn't some one do this there could be a lot of money made from this

Use Skybound Gecko for the browser it is very useful when it comes down to video on websites and will not leave history in browser.

The correct term is "Done", I changed it. And I was planning on switching over to Gecko.

Added:

Hotkey: Press escape to exit immediately

Motion Detection: Point it at your door and program will exit when it detects movement

Clear History Button.

QyXy - January 4, 2015, 12:53 am

This is a hilariously amazing concept, though I could not see myself using this more than once to be quite honest haha

LynS - January 4, 2015, 1:26 am

In some hard times, one might watch.

Drizzy?? - January 4, 2015, 12:20 pm

Alrighty, I added a new browser component so no more IE shit. Also removed the Clear History button as the new browser component wont save history. In addition, I have split up the settings manager into two seperate windows instead of one button opening both of them.

Optimized - January 4, 2015, 12:22 pm

Is used to hide watching porn.

but application had Porn in the title.

If you rename this to like "Infinity Browser", so if your parents see it, I'd love u.

Changed the title for you ?

Maybe even add an option in the setting to set your own title? Save it as a setting so it persists after you close the application.
