Thread: [Easy AutoPilot Spreading Methods?](#)

WeaponsGrade - January 5, 2015, 10:21 am

Hello Hackforums, I was wandering what the best autopilot method for spreading my RAT around. I own the paid versions of Byte Crypter, NanoCore RAT, And IM3 RAT. Basicaly I an looking for an easy method to get me anywhere from 25-50 infections/week. If you have any suggestions please let me know. Thanks.?

youtube, tumblr, or a ewhoring bot would probably be what you want

here is a link to a tumblr spreading method

<https://hackforums.net/showthread.php?tid=2844607>

as for youtube just make vids of video game hacks or some other program and put the download to your RAT in the description

and a ewhoring bot might go along with tumblr to get traffic to your tumblr or just find a bot that can join chat rooms and say things like "hey r8 me (clean pic) if u want you can get some of my nudes here (link to rat/driveby)" or "hey 23/f/new york (clean pic) follow me on tumblr and you might just get a little treat ;)"

also here is a tut with more spreading methods
