Thread: [\[TUT\] Find a facebook profile through a picture](#)

TheNakedEmperor - January 5, 2015, 11:46 am

It's pretty common but if you don't know it, it could be helpful for you.

Other than reverse search of images through google that sometimes leads you to the image source, this method is for facebook pictures only

step 1 - find the image you would like to find the profile of

step 2 - take the link of the image, it would usually look like

as you can see the link is long but it will always have the same structure only with different numbers, the numbers will always look like ****_****_****

in our case :

what we want is the numbers in the middle.

so we copy them (598397_506170199405174_520498533)

and we paste them after facebook's url:

<https://www.facebook.com/506170199405174>

it will lead us to the profile that the photo was taken from

The method DOESN'T always work but definitely worth the shot

Enjoy?

It's stated it doesn't always work, in that case use [imgops.com](#) and do reverse image search.

Nice tip OP! :)

Wow thanks! Ill give this a shot now!

Thanks for this!

ubnt123 - January 5, 2015, 12:43 pm

step 2 - take the link of the image, it would usually look like

i cant understand your method ,why i need to know the profile when i have access to the photo from the profile?

i mean the link you talk where you took it from?

It's for when people post a url of a facebook image, through that image you cannot find the profile without using this method..

Hoping this clears it up for you, if feel free to PM me

ubnt123 - January 5, 2015, 1:48 pm

yes clear thanks for the share ..keep it up !
