how to setup Darkcomet or NJrat on linux

i am assuming you have already port forwarded, if not then simply Google how to on your router

What you will needLinux (duh)

Wine (i will tell you how to install this)

Darkcomet or Njrat files

Download to Njrat [here](#)

Download Darkcomet [here](#)

First you need to install wine

Code arch linux:

```
sudo pacman -S wine
```

Debian:

```
sudo apt-get install winenow just install it like any other program
```

now go to Darkcomet or Njrat files and run the .exe with "windows program loader"

Spoiler ([Click to View](#))

[img]http://s17.postimg.org/u37shwe8v/winewindows.png[/img]

now you're done!

[img]http://s2.postimg.org/hpcyuk8op/done.png[/img]

im not going to show you no-ip DUC (no-ip apparently is not safe anymore) as for a vpn, just look it up here on HF

WARNING: NJrat can be unstable running through wine and i am looking for a way to fix it
unstable njrat

Spoiler ([Click to View](#))

[img]http://s14.postimg.org/kg2g7uch/unstable.png[/img]

The only work around would be to run windows through a Virtual machine using either VMware or Virtualbox however this could

cause NJrat to run slowly

if you have any problems please ask me in the comments or via pm

Phurkus - February 21, 2015, 11:13 am

good thread man. im suprised nobody even commented on this. Hope your still willing to help with the PM's. i just finished installing. thanks again mate

SIM-2198759 - February 21, 2015, 11:40 am

Wine is pre-installed in most debian distros.. It's easy to do this but it will help the newbies

SIM-2481013 - February 27, 2015, 8:18 am

In the njRAT builder what should you put in host? im dumb

PolarBeats - February 27, 2015, 2:51 pm

that is where you put your IP/DNS so your bots can connect to you

.GonZ0. - April 14, 2015, 11:49 am

Wow This is AMAZING!!! What a Killer tutorial! Thanks a million!

tochukwu202020 - April 18, 2015, 7:50 pm

awoson tutor,
i can not wait to get start

Orchid - April 18, 2015, 7:55 pm

Lol why is it rainbow lol?
Lol hahahahahha

well first off what seems to be the problem?
also what distro of Linux are you using?

Mcbride - April 20, 2015, 8:16 am

Good tutorial mate, thanks for sharing

Excaahhh - April 22, 2015, 7:33 am

Im guessing this will work with botnets and stuff aswell right?

Excaahhh - April 22, 2015, 7:39 am

(Apr 22, 2015 07:37 AM)Lalit Agarwal Wrote: [\[CITE\]](#) Nice tutorial OP, good work!

Botnet is on Web not on OS.
what about MeTuS? its a program can i use that on Kali?

the only part of a botnet that would need a certain OS is the builder and yes you could run a builder through wine, however if you have the source for the bin and you need to compile it that way then i am unsure, you could probably find a compiler for the language the bot is coded in but again i am unsure about that.

nourinb2013 - May 9, 2015, 12:20 pm

it wont start on my slitaz linux
i installed the wine and it wont start
even in kali linux it wont start
anyone help plz
