I will analyze it, and post here a result.

EDIT: It is infected. I have proof:

1. [img]http://addpic.info/images/sdsd.jpg[/img]

Why should it have "Microsoft Copyrgiht"? It is crypted with a crypter. A Crypter makes this kind of assembly to make the server more undetectable.

2. It is only 19,5 kb. Obvviously a server.

3. Drops some .dll when I run in sandboxie.

This is infected, and reported for a infected link.

This thread is 14 fucking years old

Nobody has "siggggggggggy" anymore and by the looks of it the originally released file was

malware anyways.
