Thread: [How to spread a RAT through LAN](#)

geldour - January 8, 2015, 8:17 am

any ideas?

I have dark comet, i can build a file and make it connect to my computer, is there an easy way to spread it through LAN??

i should note that we all have static IP addresses from the router thing

Juggernauten - January 8, 2015, 8:18 am

Short answer, Yes it is possible. But not easy.

Evanescence - January 8, 2015, 8:21 am

It's really easy if you're close enough to connect to the same wifi network. Get on the other computers and run the RAT. Done. ?

ArtMachine - January 8, 2015, 8:22 am

mm, so i can just put the RAT on a usb and be all sneaky and shit and just put it on there computer and double click it??

will i still need to crypt the file to do it this way? as that is the stage i am up too, cant find a free crypter that actually works :(

Sicarius - January 8, 2015, 9:06 am

Yes, use a MITM attack like DNS spoofing if the hosts are connected via wifi.

If the devices run via ethernet, you could attack the router and gain access to the panel, from there you could effectively do the same as the above attack.

ldkx - January 8, 2015, 9:11 am

Do all the machines use a shared drive/file by chance?

geldour - January 8, 2015, 9:15 am

no, different drives mate. And im pretty certain that he would not open up the shared section haha

and my computer is Ethernet, my sons is wifi.

Its the wifi one i need to keep an eye on.

same internet though, eg- my ip thing is 10.X.C.G and this is 10.X.C.F

ldkx - January 8, 2015, 9:19 am

Ok so you are wanting to infect just 1 other machine on the network?

geldour - January 8, 2015, 9:23 am

just 1, i have no need to get into the older kids computer

ldkx - January 8, 2015, 9:26 am

(Jan 8, 2015 10:23 AM)geldour Wrote: [\[CITE\]](#) just 1, i have no need to get into the older kids computer

Sorry for all the questions, how savy is he? If i may ask, what are you looking for or wanting to keep an eye on?

jcbullet - January 8, 2015, 9:29 am

lol easy if you know the credentials, go to C\$, startup then place there. Then open cmd on ur machine shutdown -i type there IP add the machine no warning it will restart the machine then ur rat will run.

geldour - January 8, 2015, 9:29 am

i want to be able to see his screen and to see his cam at times so i can see if / when he jumps out the window. he is a little asshole haha.

he is 15, knows a little about computers but not lots. But i can not use team viewer etc as that would pop up on his screen and say he is been watched.

i do not know the password to his computer

i do however have his

Connection Type:

IP Address:

IP Address Allocation:

IP Address Type:

Hardware Address:

ldkx - January 8, 2015, 9:33 am

if something was wrong with his connection, would he let you work on his machine?

geldour - January 8, 2015, 9:35 am

haha maybe, mm, gives me an idea haha

maybe i could put the rat on a usb and slip it in when hes not looking

ldkx - January 8, 2015, 9:37 am

(Jan 8, 2015 10:35 AM)geldour Wrote: [\[CITE\]](#) haha maybe, mm, gives me an idea haha

That or set your IP address to his ip and cause a conflict. Do this until he asks what might be wrong.. Then add the rat while your working on it.

geldour - January 8, 2015, 9:41 am

i may have to do that, was really hoping to be able to do it without having access but this may have to do.

Would of been better to be able to crypt it and bind it to a pic or somthing and just send him the pic over facebook haha

ldkx - January 8, 2015, 10:16 am

What kind of webcam is it? Can you access it over the network?

Id screw the window shut lol. Do you have a security system?

If the devices run via ethernet, you could attack the router and gain access to the panel, from there you could effectively do the same as the above attack.

I also have the same requirement.

I want to get access on a network.

For example, there are 10 computers in a local network (all ethernet connections)

I have installed RAT in 1 computer.

Now can I spread the RAT to all other computers with the help of the 1 infected computer?

This thread is five years old. I doubt you'll get the response you desire.
