Thread: [\[Janus\] SQLi challenge #6 \[hard\]](#)

JaNuS18 - January 8, 2015, 12:22 pm

Hi folks,

This is my challenge #6 for advanced injectors. After warming up with previous 5 let's start with hard SQLi challenges ?

~ Tasks ~

- display version with your name
- display number of tables in main database
- display top 10 tables (with their date of change) that were changed most recently
- display top 10 "oldest" tables (with their date of change) according to their dates of change
- each list should be numbered separately

~ Site ~

aHR0cHM6Ly93d3cucHJlbWl3ZXMuY29tLmF1L3Jlc2lkZXRhaWxzLnBocD9pZD02MTUxODcx
(Base64 decode it using online decoder like <https://www.base64decode.org/>)

~ Proof ~

[img]http://img15.hostingpics.net/pics/32830315c1.jpg[/img]

~ Rules ~

- you may not use commands: order by, group by, min(), max(), greatest(), least()
- solution should be pure SQL
- your syntax should work without knowing anything about databases/tables/columns on that site...

Post your syntax to <https://privnote.com> (it is automatically destroyed after reading) and send me link to PM

Let's SQL knowledge be with you ?

~ Solvers ~

- makman ?
- S-x-S ?

P.S.

Don't harm the site. ? I choose it only for the challenge...

Try also my other challenges for advanced injectors:
