Thread: [Load web browser while sleep rest of code?](#)

Vezo - January 8, 2015, 7:23 pm

Can someone help me please? I need to load the web page while the rest of the code waits for it to load, i tried so many hours but can't seem to figure it out!

```
Code Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles Button1.Click
```

```
    'My.Computer.FileSystem.DeleteFile("C:\Users\Simon\Documents\Visual Studio 2010\Projects\#\#\bin\Release\captcha12.jpg")
```

```
    UseProxy(RichTextBox2.Text)
```

```
    WebBrowser1.Navigate("http://cc.cc/capt/capt.php?sc=1cve")
```

```
    Dim both As Bitmap = New Bitmap(570, 147, Imaging.PixelFormat.Format32bppArgb)
```

```
    ' Create a Graphics object that will process the screen shot
```

```
    Dim gfx As Graphics = Graphics.FromImage(both)
```

```
    ' Copy the screen contents
```

```
    gfx.CopyFromScreen(0, 0, -80, -240, Screen.PrimaryScreen.Bounds.Size,
```

```
CopyPixelOperation.SourceCopy)
```

```
    ' Save the resulting graphics
```

```
    both.Save("captcha12.jpg", Imaging.ImageFormat.Jpeg)
```

```
    PictureBox1.Image = Image.FromFile("C:\Users\Simon\Documents\Visual Studio 2010\Projects\#\#\bin\release\captcha12.jpg")
```

```
    Button4.PerformClick()
```

```
    'sw.Start()
```

```
    'Do
```

```
    'Application.DoEvents()
```

```
    ' Loop Until sw.ElapsedMilliseconds >= 5000
```

```
    'sw.Stop()
```

```
    WebBrowser1.Document.GetElementById("adcopy_response").InnerText = RichTextBox3.Text
```

```
    'My.Computer.FileSystem.DeleteFile("C:\Users\Simon\Documents\Visual Studio 2010\Projects\#\#\bin\Release\captcha12.jpg")
```

```
End Sub
```

Use your DocumentComplete event to run any code after your page is finished loading..

[http://msdn.microsoft.com/en-us/library/aa768329\(v=vs.85\).aspx](http://msdn.microsoft.com/en-us/library/aa768329(v=vs.85).aspx)
