Very nice.

What camera/lens did you take it with if you don't mind me asking?

My main problem with the kit lens, especially that 18-55mm is that i notice a lot of distortion /

softness at some apertures. Neither of those seem to be effecting your photo though so I'm guessing you either edited it well with lens correction or you managed to find that "sweet spot" in the lens settings.

I have quite a few years under my belt lol :)

The only editing i did was the colonization of the image to B&W

Nothing more nothing less.

Man, way to bottleneck a great camera. Toss that thing towards your closest fireplace.

Get a prime instead of zoom lenses, it will do your camera the justice it deserves. ?

Im aware of this. I had the 18-55mm kn just to prove a point to my aunt.

My 50mm and 12-24mm is life

if you don't mind me asking, could you perhaps upload the color version too? Whenever I edit my own photos to be MC, they don't look nearly as good (usually the contrast seems a bit off)
