Thread: [get any ".exe" full source code with CodeReflect](#)

HamoodMark - January 11, 2015, 1:49 pm

Hi Guy I'm New Here , And i have a question that can i get any ".exe " programs full source code with " CodeReflect " in vb.net Language to use it in visual basic ? i already try it and get some codes but it looks very Difficult ? any other programs that i can use it to get source codes in vb.net Language ?

Try Simple Assembly Explorer, .NET Reflector, DNEditor, DotNetResolver

Can't believe you didn't include Telerik JustDecompile in that list.

Please google before claiming non-sense

Buy a license of .NET Reflector, you'll not regret it :)

While I used to really enjoy .Net Reflector (and still have an active license), I have really begun to enjoy using Telerik's JustDecompile. While I rarely use it, JetBrains's dotPeek has some nifty features, such as being a self-hosted symbol server.

For this I would only recommend .net reflector, DNEditor is good for what its name suggests, not so much really anything else.

Don't. net reflector is insecure as fuck and fails even on slightly obfuscated assemblies.

I'd recommend to go with dnSpy
