Thread: [Need 2 MD5 Hashes Decrypted!](#)

Earn - January 11, 2015, 10:18 pm

Hey guys! Can someone please decrypt these 2 MD5 hashes for me? I have tried all online decryption sites, but they do not show up any results.

These are the 2 hashes.

Code ec5a19d2f2925bb45bdb31c487de2b54

9A8308880A1AE91914699D9D13940039

Thanks guys! :)

IHitNoobs - January 11, 2015, 10:25 pm

i couldnt even pull them bro wish i could have helped sorry

Forezza - January 11, 2015, 10:46 pm

Other one is still going but seeing as it's on CMD5, I'll probably crack it.

Done

Thanks man! By the way, how did you crack it? Was it with Rainbow Tables?

It was by using oclHashcat with a bunch of different attacks that I've formed over the past few years hash cracking. I have a GPU that most hash crackers would laugh at, but I still manage to crack significantly more than most people anyway. An efficient set of attacks is the way to go :).

What GPU do you have?

I bet you can beat my GT 630M

Actually, speaking of efficient attack methods, I have designed a new, fairly powerful attack method that I'd like to have some others look at. Interested?

I would be very interested in this method you speak of.
