Thread: [Computer has been compromised - Gmail & Steam were logged into.](#)

BritishKitten - January 12, 2015, 9:46 am

I need some assistance at getting rid of whatever virus is in my computer. Nothing has been taken although I do want to get rid of it for my safety.

Can someone help me through this?

It's quite urgent to me, thanks.

Computer seems to be running fine but I don't feel comfortable using it.

I don't understand how my Gmail was hacked. It requires a code from my phone number.

D1Ve - January 12, 2015, 9:53 am

Have you tried scanning it with an Anti-Virus and/or a Anti-Malware (Malwarebytes etc)
Good luck removing the virus.

Entityy - January 12, 2015, 9:54 am

If you need me to help you secure your gmail so it won't be hacked, I can help you do that easily.
Shoot me a PM.

Good luck removing the virus.
I have Malwarebytes Pro & Avast but they haven't detected any viruses.

I'm very very suspicious about how my Steam & Primary Gmail were compromised.

Don't have another computer to login to.
I'm unable to access Safe Mode. Keyboard doesn't work and computer loads up too quickly to select.

What version of Windows do you have?

Karnaugh - January 12, 2015, 2:27 pm

My steam has been cracked for more than 20 times now, always receiving SteamGuard mails ahah
