Thread: [Have their email pw and skype username, need skype pw. will pay!](#)

kingallenw - January 16, 2015, 11:58 am

Hi all,

Pretty new to hacking and have failed to do this. Pretty sure GF is cheating on me, just want to confirm - I have skype username, email and email pw so I can't just reset the pw or she will figure out it was me who changed it.

Any way to gain access to the account without resetting the pw? Will pay \$20+ if there's a method.

Thanks all and sorry I'm a noob

If you have access to her laptop/computer, it's easy and you can do it on many ways.
Just put a lil simple keylogger on it.

This seems like a pretty sticky situation but I understand why you need to do this.

How I would do it:

Reset Skype password

Delete reset email

Look through Skype messages.

She will just think her Skype fucked up and will reset her password.

Reset Skype password

Delete reset email

Look through Skype messages.

She will just think her Skype fucked up and will reset her password.

Problem is that she'll probably notice since so many people have their e-mail attached to their phone, so she'll get a notification, even though he deletes the mail.

This.

Since you have access to her email, see who she emails; friends, family, etc.. . Use an email spoofer and send an email from one of those frequently contacted email addresses with the keylogger attached to it. Of course, it'll be someone she emails, and someone she trusts, so she'll

probably run it.

Maybe you've already done it, but try the same password for her email, as her Skype password. Really though, if you don't trust her, you shouldn't be with her. Simple.
