Thread: [Darkcomet WTF?](#)

D_rkAn9el - January 18, 2015, 6:44 am

Im having problems with darkcomet.

I get port opened, checked on canyouseeme.org

I downloaded no ip

I did everything im supposed to.

But theres a weird thing happening. When i create a stub with the same exact settings, it will sometimes work, sometimes not.

Can somebody tell me why ? or use teamviewer to help me?

add me on skype lefantan520

Hesh448 - January 18, 2015, 7:18 am

Try it on you friend, if i try it on me its never work. But if i send my stub a friend its worked very fast

Lovesosa - January 18, 2015, 7:49 am

i added you, add me back mitzzhf thanks man

Paranoid? - January 18, 2015, 7:53 am

Do not use No-IP. Alternatively, I highly suggest you using FreeDNS.

Batcard - January 18, 2015, 8:00 am

Try using njRAT, i think it is way better than DarkComet.

Anubitzs - January 18, 2015, 11:03 am

I have the problem,that Darkcomet doesnt wanna work when I connect over no-ip client, but it works with 127.0.0.1 (localhost). I checked on canyouseeme.org and the ports are free. Everything is setup right and I think it might be no-ip's fault if anyone can help me hit me up on skype. I once had a network with over 500 slaves and now I wanna rebuild it again.

Anyway heres the skype : anubitzs

Same here!!!! The guy up there says try to use freedns as no-ip is not stable. I'm going to try this out later

PoopyJew - January 18, 2015, 4:08 pm

Your problem is No-Ip. Get FreeDNS or DuckDNS.

Radar7 - January 18, 2015, 4:09 pm

If you're having issues with setting up freedns check this tutorial

U?para?ormal - January 18, 2015, 5:26 pm

I suggest using DuckDNS over No-ip. You will loose your slaves with no-ip

Duckdns doesn't work too. I will try free DNS when I have time.

Add me on Skype if you can help me

woahxx - January 18, 2015, 10:59 pm

That happend to me too, it's because of build name, do not use special chars. Just like: bot, legion, stub, etc.
