Thread: [Thought the problem was fixed.](#)

?CutestLlama? - January 18, 2015, 5:25 pm

Hi,

There must be a computer magician somewhere out there...

Can you tell me what this means? or how to fix it?

I watch Supernatural on Netflix, only have 1 tab open and eventually I crash.

Spoiler ([Click to View](#))

What do you think?

I also came across this one;

Spoiler ([Click to View](#))

I did look into that one and found that its my PSU, apparently.

Soooo yeah. I am not sure on what to do. I've been looking into the first one and I'm confused on what it could be.

You have not tell us if those errors cause any problem or not those errors usually cause no problem if it does we need to no what is the problem you want us to repair. Check in Device Manager if all the devices are installed properly also update drivers to latest drivers also update drivers for devices that are attached to computer. Visit the microsoft website for information about Windows Kernel event ID 41 error.

"Windows Kernel event ID 41 error "The system has rebooted without cleanly shutting down first"
<http://support.microsoft.com/kb/2028504/en-us#method1>

Yeah, cause what's it called,

It freezes up if I have too much things running. I tried the graphics card, that's not it.

I cleaned the dust in my processor ~ So far, not so bad.

I've looked up EVERYWHERE and nothing helped.
