Thread: [Someone attempted to hack my website via Acunetix...](#)

Dgameman1 - January 18, 2015, 7:45 pm

So yeah. I have their IP and they tried SQL injecting my website and they spammed account creation.

It was a bit helpful cause now I know what to fix but I have their IP. Anything I could do with this?

Hades. - January 18, 2015, 9:07 pm

why dont you ddos his connection? script kiddie?

Windows Store - January 18, 2015, 9:08 pm

ISP Dox him or contact the police about this issue.

Linxy - January 18, 2015, 9:09 pm

I would personally thank him for pentesting my website but hey, being a cunt by ddosing him can go far right?

I've already pentested my website and I'm currently in the process of fixing it. What he did was extremely unnecessary.

My website is a gray area legally so I don't think contacting the police would be the best

notrestoed - January 18, 2015, 9:33 pm

You can always ddos them or just report it :D

Oscura - January 18, 2015, 11:41 pm

They probably did not use their own IP. It would be pretty dumb.

High chance they used a VPN so don't even bother...

w34k - January 19, 2015, 12:06 am

Are you sure it's their actual IP ? It could be a VPN/proxy. They could have a dynamic IP and it could have changed or they may have changed it etc. Do a WHOIS on the IP.

<https://who.is>

You can also use <http://whatismyipaddress.com/ip-lookup> and it will tell you if an IP is static or dynamic.

The IP is static.
