Thread: [I Hacked an DataCenter - Need an Botnet](#)

Yunus5698 - January 19, 2015, 12:09 pm

I hacked an big DataCenter. Each server got an internet connection of 10 Gbit. I want to use the servers for DDOS. First of all I need an nice BotNet. Second one I want to ask you guys if it is wise to do it? There are more then 100 servers. Think about 100 x 10 Gbit :D. To DDOS.?

Sennheiser - January 19, 2015, 12:12 pm

Lel

Hacks an entire data cente

Doesn't know how to use the servers to ddos

Artisanal - January 19, 2015, 12:17 pm

Nice try.

You don't know any bot and are talking about buying a BotNet, but you apperently just got one. Seems pretty legit.

Raoul Duke - January 19, 2015, 12:30 pm

There is a big red button on the server saying "DOOM THE WORLD" just press it and run to the mountain with a bag of dry beans and nut butter.

Unafflicted - January 19, 2015, 12:37 pm

EZ. Just BSOD your toaster and unplug the cable from your computer to overclock the internet.

Stealing. - January 19, 2015, 12:39 pm

This and the thread made me laugh. And the thread seems legit.

Akex - January 19, 2015, 12:42 pm

Your english just made me lol. Why the hell would u use a 100 servers to host a fucking botnet?

.?cb. - January 19, 2015, 12:45 pm

You want use a datacenter just for ddos? wtf ..

n3bula - January 19, 2015, 12:49 pm

So you hacked a datacenter and you need help to ddos?? But let me start again, you were able to hack a datacenter...umm ok.

Yunus5698 - January 19, 2015, 12:51 pm

My Skype is Yunus5698. Add me if you want :D. SO we can talk about it.

nonA? - January 19, 2015, 12:51 pm

Sell your "Datacenter" servers, and buy botnet and buy lots of slaves. Or rent botnet/DDoS service. Seems you dont have no glue what you are talking about.

And if you are so badass on hacking business as you can hack a Datacenter, why you dont use your knowledge for do it yourself? If you have skills to hack Datacenter you have skills to run a botnet or use those Servers to DDoS.

And answer for your question: No its not wise, they reconize that you are using their servers for DDoS. Or if they dont notice that your target notice that and contact your hacked servers owners/federal. And then they shutdown all backdoors to your rooted servers.

So this is a big troll, or you have been done all with 0.0000001% luck what means you are in deep shit now.

Yunus5698 - January 19, 2015, 12:55 pm

I can sell server passwords to others. Thats an nice idea. But I need to have an nice BotNet to use it. I can only crack only passwords. So If someone want to help me. Add me on Skype: Yunus5698.

Raoul Duke - January 19, 2015, 1:03 pm

Do you understand yourself? Or you just work in the datacenter as the janitor and find that someone doesn't switch off it's computer at the end of the day.

PS: I have hacked the government please contact me on facebook ...

No, he had a school tour there where they got to press the "Power" button on a new server. I guess it got him a little excited.

Right on matey, this guy's got it locked down

Artisanal - January 19, 2015, 2:14 pm

Damn this thread is HQ. As a Grammar Nazi I have nothing to say.
