Thread: [\[Userscript\] HF Profile Image and Signature Blocker](#)

TyrantKingBen - January 20, 2015, 9:51 pm

What this script does is allows you to block profile images and/or thread signatures for when you view threads, private messages, or profiles. It also allow setting custom blocked profile images/signatures. Make sure to put in your custom blocked profile image dimensions.

I made this because I found a profile image to be disturbing and I wanted to block it easily. Then, I added the ability to add a custom block image/signature so if you wanted to block, for example, scammers and set a custom "This person is a scammer" image/signature. It allows you to have NSFW feature of <http://hackforums.net> without blocking every image/signature, as well. NSFW has been removed.

This will automatically block the profile images/signatures to the members your block when you load a thread.

[Default configuration](#)

[Testing configuration](#)

[Fixed quick links effect \(use if you have HFES\)](#)

[Example profile image](#)

[Block profile option appears when you bring mouse over profile image](#)

[Profile image is blocked to custom image](#)

[Example profile signature](#)

[Block signature option appears when you bring mouse over signature area](#)

[Signature is blocked to custom signature](#)

[Clicking the unblock button will unblock image/signature for that profile](#)

[If reload is turned on in the configuration panel the image/signature will reload without refreshing the page \(this is the spinner while it gets the current image/signature\)](#)

Do not PM staff or moderators about issues about or caused by this script. This is not an official HF plugin

Some credit goes to [Emylbus](#) for his configuration panel CSS design and he allowed me to use @require dependencies directly from his server, but GreasyFork disallows this.

Features: Spoiler [\(Click to View\)](#)

Current version 0.6 Works with HFES

Reload profile image automatically when you unblock

Custom blocked profile image

Reload profile signature automatically when you unblock

Custom blocked profile signature

Custom blocked profile signatures allow HTML coding

Block or unblock only shows when hover your mouse over the image/signature

Custom configuration panel

Reset all settings of the script easily from the configuration panel

"Reset to default" in the control panel will completely reset the script variables. This means it will wipe your blocked user profile images/signatures as well as reset the control panel.

(Jan 21, 2015 12:25 AM)xadamxk Wrote: [\[CITE\]](#) Get Snorlax or Emy to approve this script and I'll add it to my userscript compilation.

You noob and all your security ?

It's clean and very nicely coded. I didn't expect the code to be this nice actually. Well written, good functions (same as I use for most of my scripts), and nothing malicious.

(Jan 21, 2015 05:29 AM)xadamxk Wrote: [\[CITE\]](#) MY USERSCRIPT COMPILATION IS FOR TEH MOST ELITE USERSCRIPTS AND IS NOT TO BE TAKEN AS A JOKE.

Your userscripts barely made it on there Snorlax, it was just hard to allow it after seeing how similar yours were to mine.

Get outta here, ya copycat ? Stop copying my shizznit!

Just updated this to fix a bug and make it run only on the pages necessary.

Just updated again to fix a bug where you couldn't click links/objects in user signatures.

TyrantKingBen - August 22, 2017, 5:12 pm

Just updated this to a working status again. Don't think it was being used, but received a question

about it so pushed an update out so that it will work again.

Updated it so now it works on profile views, too.
