Thread: [200+ downloads with FUD = no install | What should I do?](#)

??? - January 21, 2015, 1:35 am

Hey everybody ?

Finally I managed to get a decent amount of downloads in a few hours but sadly there was not a single install even tho my file is 0/47 FUD ?

I guess the problem is that my RAT has the .ico of a movie file and is called KatyHot&Sexe.mp4 (<- Spoofed but still FUD) but when you start it, it asks you if you are sure to run a program from an unknown publisher ???

So what could I do to change that problem and get atleast a few installs?
Have you guys got any tricks you could tell me for good looking viruses? :)

Thanks in advance!

Try ewhoring get on skype with these guys and hand out picture folders see if maybe that works. One of those horny pervs is bound to open it regardless of consequences.

I've sent you a PM, Good luck spreading.

Thesse - January 21, 2015, 2:25 am

Well about that asking if you want to run it, you have option in some crypters and RATs to disable ZoneID. Also did you test it out before you started spreading?

I tried it, but somehow when I tried it again yesterday evening nothing worked. :/

I'm gonna give it a try now again.

So disable ZoneID is disableing the following problem?

<https://i.imgur.com/1VQOfhw.png>

The File I downloaded was 0/42, it's just destroying my install chance what chrome is doing there :x

EDIT: I tried ZoneID with my Crypter but it didn't chance anything.. maybe the feature isn't included yet tho.

Another question: Is there a possible way so when you start the virus you don't get asked if you are sure to run a program from an unknown publisher?

Because I'm spoofing my Virus as a .mp4 and you don't get asked for permission when u start a mp4 :p

All those small things end up making my file to suspisous, I'm getting now Installs even tho I got lots of downloads. <_>
