Thread: [protect your application in\[startup\]](#)

**xVipX** - January 21, 2015, 10:04 am

hey many of y add his application or server in startup but the antivirus  
or user pc delete your app so this code will help you to protect your app  
your app will use the use the app in startup by FileStream !!  
just tested

```
'writed by xvipx  
Dim fs As IO.FileStream
```

```
fs = New IO.FileStream(Environment.GetFolderPath(7) & "\" & "!name.exe",  
IO.FileMode.CreateNew)  
Dim b As Byte() = IO.File.ReadAllBytes(Reflection.Assembly.GetEntryAssembly.Location)  
fs.Write(b, 0, b.Length)  
fs.Flush()
```

good luck

i have create this function :p it simple func

**nathan72389** - January 21, 2015, 10:29 am

there is no real use for the whole file stream.  
if i was going to do this i would of just use io.file.copy but i guess that is just too easy.

**xVipX** - January 21, 2015, 10:32 am

but wil copy him self one time els if you use timer or something like that ...  
my code will stop delete of apps from startup  
very simple

what are you talking about, your code does nothing but copy a file in a really silly way.
