Thread: [\[TUTORIAL\] How Share Apps using Airdrop Iphone To Iphone \[TUTORIAL\]](#)

iphone5s - January 22, 2015, 7:15 am

Recently i jailbroke my iphone 5s and was wandering around google to find some tweaks for direct downloading apps from AppStore and found this amazing tweak which will help you download apps also and help you share apps also,

COMPATIBILITY:

-Tested on my iphone 5s ios 8.1.2

REQUIREMENTS

- Jailbroken iphone for sending apps
- iphone may or not be jailbroken for receiving apps
- Device supporting Airdrop.

TUTORIAL

-First of all install "LinkStore for ios8" tweak (if u haven't) using this Repo :

<http://repo.hackyouriphone.org>

-Next Install "Anydrop 3" tweak from Same Repo.

-After you installed tweaks, then u can also use this "Linkstore" tweak to installed paid apps directly from app store you'll get an button below the app logo.

-Now main thing first of all open your setting-->LinkStore-->Repack ipa file.

-And then you can select any app and it will automatically create an ipa file and saved in location "/var/Mobile/Media/LinkStore/Repacked/appname.ipa"

-Then open the "Anydrop 3" app and navigate to "/var/Mobile/Media/LinkStore/Repacked/yourappname.ipa" then Enable Airdrop.

-click an "i" icon next to app and send to other iphone via airdrop.

-When the other iphone will receive the app file then Action depends on the device:

1)If device is jailbroken then you can open app using Appcake and it will directly ask you to install the app.

2) If Device is non jailbroken then u can open the file with any file manager like "iFileExplorer" then later on after connecting to PC you can install that app.

-Hope This Helps
