Some good ... with the possibility ReFUD

and not some old in 2009 because they are unlikely to refud

C# Only

You're not going to find a source that you can ReFUD, you can't just take some source code off the internet and change a few letters, you're going to need to start from the ground up if you really want crypter.

mmaciol123 - January 22, 2015, 12:50 pm

My friend took the code from the internet and is FUD

Then why don't you ask your friend where he got the code from, take it aswell and have your own

FUD crypter? ?

Fucking LQ as fuck.

You come here grab a crypter's source, change 2 buttons in the GUI and going to sell it? You won't learn encryption stuff if you don't know the basics.

Never heard of looking to learn a crypter before.

I think you want to learn programming aswell as Cryptography.

janeanna - June 25, 2016, 1:29 am

which crypter is the best to use on netwire

Well @OP

I am thinking on releasing the latest Insanity+ crypter source for free or for very small fee. I don't want people to use this for malicious purposes but for legal uses only and of course for educational purposes.

However buddy, If you want to learn how crypters work then use the search function. There are tons of guides and information on HF which you can learn from.

Have a nice day.
