Hi , today i'm showing you a new project that i've made. It's a bot which has an "audio logger" it's like a keylogger but instead it's recording the microphone of the victim.

The bot is linked with the installed panel and receive logs.

You can see a demo of the panel here :

URL : [Audio bot panel DEMO](#)

Login : Username -> guest & Password -> guest

The bot is 100% FUD , you can see the scan below of a simple built bot :

SCAN : [RazorScanner RESULT](#)

If you wanna buy a copy i only accept paypal for payment. Please note that the package contains all the sources and the audio bot package.

You'll be redirect to your download after payment. If any problem occurs PM me.

Have a nice day !

Best regards,

CDevCom.

If you have any questions about this project or the sources , feel free to PM me :D

I don't think this is worth anything near 70\$

Agent Raigar - January 23, 2015, 6:22 am

Way overpriced. Good luck with sales though I doubt anyone is gonna buy this for \$70

Darkwin - January 23, 2015, 6:22 am

This isn't worth \$70 considering most FREE RATs already have this option by default, Good marketing attempt though.

Ok guys considering my product is new on this forum , i'll put it down to 10\$! :)

I've put that price at the beginning because the source is included , but i wanna share it too so i've

lowered the price.

lol

Implying that RATs or Keyloggers are not as or even more creepy than this.
