All in all, this hosting company has set its limits and has shown me the great dedication, and responsibility they put forth. This company is very reliable and their website is clean, making it easy to maneuver, and depict your next move. On a personal scale I would rate this company a 10/10. The support staff is always there to make sure your problem gets resolved and handled the correct way, and the fastest. They are genuinely dedicated and love to answer your every question! I feel like I can ask them anything and in return, they give me the best advice. I would recommend Puroxy 100%.

Post Malone - February 2, 2015, 8:19 pm

I've been a client of Matt's for several weeks now, I have to say the customer service get's a 5 star rating by itself. The server I've purchased is impeccable. The speed and 24/7 up time is exactly what I expect out of a company. Puroxy definitely delivers.

Recently bought a VPS from Matt and the setup was actually pretty fast for a smaller company. Probably 2-3 minutes after my purchased Matt reached out to me asking if there anything special I'd like pre-installed or if I had any questions, and I thought that was pretty unique as I've dealt with these types of providers before and usually they just set you up and let you run around blind. If you're looking for an upper-level VPS provider I definitely wouldn't look anywhere else. I don't know anything about their lower-level VPS setups but I'm confident they're solid based off what I'm using.

Glad I got referred to you guys, saved my ass. Goodluck, thanks again.

What do you mean by "better?"... That could mean so many things... Hardware? Look at the stuff hes listing. Support? Both would be solid support cause both are small companies with multiple employees. Legitimacy? Both are extremely trusted and well-known members. (Oct 14, 2015 07:29 PM)Lenchmob Wrote: [\[CITE\]](#) What does the Shared Hosting meaned, I am looking for something that can run my clicker heros with an auto clicker can it do that? Hello,

Shared hosting is basically hosting your website on a shared server. You will obtain a cPanel account and you can begin uploading your website files.

However we are currently moving to a new shared hosting node. However you can setup your click hero on a VPS and have the same functionality.

Thanks

I'm waiting!Of course I have no idea who you are, I have hundreds of clients from all over the place and your just a user on a forum making acquisitions. You've claimed we've terminated your service due to a DMCA complaint which is inevitably a feasible reason to do so. If you read our TOS you will understand this.

Again open a ticket with our support and I'll personally send you the DMCA complaint along with the number of the DMCA agent who filed the complaint so you can communicate with them directly.

On a side note: If you were really serious about obtaining that DMCA complaint, you would have opened that ticket by now. As well as not publicly display the complaint, that would not be your best move.

Thanks ?

Thanks for your question. Well first off we don't offer offshore windows servers and our prices are more expensive because we offer nothing but the best hardware for our services, so when purchasing from us you can be guaranteed quality.

Thanks

Bluffer - February 26, 2016, 3:42 pm

Earlier this month when I was searching for a new host, I came across Matt's service, he took the time needed to explain everything in great detail (including what he thought would best help my website) however stupidly I decided to go the cheap way out and ended up buying a terrible host.

This week I had enough of my terrible host and contacted Matt once again, he then took the time to once again go over the services that he provides that he thought would be best for my site and I ended up purchasing from him.

There is a lot of hosts on HF, and to many of them are either shit service, shit quality, and shit knowledge or all of the above, that is NOT the case with Matt, he knows his stuff here and provides excellent quality hosting.

Don't buy from other hosts, they are not worth it and like me you will come back wishing you went to Matt in the first place.

BIG VOUCH!

(Apr 6, 2016 10:29 AM)GG123 Wrote: [\[CITE\]](#) Please someone help me. What does a VPS do?Hello,

Quote:A VPS runs its own copy of an operating system, and customers have superuser-level access to that operating system instance, so they can install almost any software that runs on that OS. For many purposes they are functionally equivalent to a dedicated physical server, and being software-defined, are able to be much more easily created and configured. They are priced much lower than an equivalent physical server, but as they share the underlying physical hardware with other VPSs, performance may be lower, and may depend on the workload of other instances on the same hardware node.

Same here, servers been down since Sunday. I literally just paid another payment on Sunday as well. I have made 20+ attempts to contact Matt since Sunday, Called, Voicemail, Skype and created a support ticket its been almost 4 days. Now that I see im not the only one having this problem im pulling the plug.

Unfortunately for you, my company is new enough with a small enough user base that I know each and every customer that has a server with us.

Why don't you give me a partial IP address for our range and I'll confirm if you're actually a customer.

Thank you.

You're right there is no rule, but you're not even a customer of either Puroxy or DasVPS so you have no say in anything without experiencing first hand what we provide. So don't say my network performance is crap when you've never even used us and don't say DasVPS isn't professional if you've never conducted business with them.
