Thread: [Syntax highlighting \[Read \]](#)

Spawner10 - January 24, 2015, 2:48 pm

So i have the Source code of 'FASTCOLOREDTEXTBOX' and i want to make my own Syntax .

So ...

what i'm trying to do :Read all keywords from the Resource (.txt file)

add it as a Changed style

so in the actually code its like this

```
Code e.ChangedRange.SetStyle(BlueStyle,
"\b(if|as|base|bool|break|byte|case|,|catch|char|checked|class|const|continue|decimal|default|delegat
e|do|double|else|enum|event|explicit|extern|false|finally|fixed|float|for|foreach|goto|if|implicit|in|int|int
erface|internal|is|lock|long|namespace|new|null|object|operator|out|override|params|private|protected|
public|readonly|ref|return|sbyte|sealed|short|sizeof|stackalloc|static|string|struct|switch|this|throw|tru
e|try|typeof|uint|ulong|unchecked|unsafe|ushort|using|virtual|void|volatile|while|add|alias|ascending|d
escending|dynamic|from|get|global|group|into|join|let|orderby|partial|remove|select|set|value|var|whe
re|yield)\b|#region\b|#endregion\b")
i want
```

to read my text resource

lets be more clear my text file include some words like this :

```
init_file
init_do
init_x
init_x2
```

and to read it and paste it as a change style in the regex

where is the fucking question?

look... ? <-- its a fucking question mark.
where is yours?

Spawner10 - January 24, 2015, 4:49 pm

(Let me retry)

how to read a resource and parse the contents in the e.ChangedRange.SetStyle ?

did you understand me ? <- this was a fucking question !

stupidSyntax.txt

Code I|fuck|your|mom

PHP Code

<?php

```
Dim txt As String() = Split(File.ReadAllText("C:\stupidSyntax.txt"), "|")
```

```
e.ChangedRange.SetStyle(BlueStyle, txt)
```

Maybe my simple logic will help you.

?

- It's me Rhez
