Thread: [Java Applet socket connection](#)

mariusz79132 - January 25, 2015, 5:10 am

Hey.

I have huge problem with java Applet.

I got small server based game and need to use sockets.

When i connect in debugger- it work fine.

But when i copy .class files and use :

Quote:<applet code="gra/logowanie.java" width="700" height="700">
asd

</applet> it freeze in browser and in logs:

network: cache entry not found localhost:8205/crossdomain.xml

I searched all over the internet and tryed everything, still no answer.

If someone know how to fix it plx share.

Uh it's connecting to localhost, try changing localhost to the address of the server?

mariusz79132 - January 25, 2015, 5:28 am

Its connecting.

Normally it connect and work, but with using browser it send get for crossdomain, and server side is getting this/

Server log:

Oczekiwanie na komende id:0

Code Odebrana komenda:GET /crossdomain.xml HTTP/1.1

Ref.

Exept socket connection i got "/crossdomain.xml HTTP/1.1" in applets in browser.
