Thread: [1 task on multiple processes?](#)

Aur3xis - January 25, 2015, 11:35 am

Is it possible to have few programs running, performing task on one, and the program will perform the same action in real time on other processes running? FE

Im running 4 paints, im drawing on one, but the moves are followed by other 3 not focused ones, possible?(I want to do this with a game)

If the window of the program relies on focus, you can't actually do it at the exact same time, but you can write a program to record the mouse movements and then repeat them after switching windows.

I don't need like a macro :P

I need something like they use in WoW multiboxing, so i can have the main game playing and if i press FE 9 on F2 it will press it on all game processes launched
