QU?CKSILVER - February 1, 2015, 7:22 am

I've gotten to bypass AVG, Avira, Avast and ESET NOD32 at full protection with another crypter sold here on HF. (Not going to mention, ofcourse)...

The hardest antiviruses that probably no one bypasses are Kaspersky and Norton Security. These are really strong when it comes to crypted/unsigned files.

You can buy it on my site with bitcoins (autobuy) : <http://www.lightcore.eu>

It's DataScrambler with a new stub yes, and a small few GUI changes here and there. Having a custom stub wouldn't make any difference, it's all about the USG, that keeps your files FUD. ?

Yes it works ? and with almost all RAT! highly compatible

ultr7as - February 5, 2015, 5:18 pm

Definitely a bomb here ! I rarely buy tools or stuff from anywhere in Internet but in this one I gave a

check.... And well , even I have used tons of crypters this is the first real CRYPTER and not a bunch of code without usage or just fud at scantime and runtime 0 .

100% fud both scantime and runtime at least from what I've seen so far and best product in HF (at least on the crypting section) , I am sure about that .

?dyss?us - February 5, 2015, 11:59 pm

They work by letting you create a custom message, including a link to your crypted file, and it will then use the infected victims machine to spam the link in his skype, facebook, runescape, and so on.

There's no real extension spoofer, this is just the typical filename.exe.png (or whatever extension you choose to spoof)

Malware can not be executed within an image unless it is exploited with some sort of hidden malicious code.

Don't even try to search a "real extension spoofer", it doesn't exist... Look nowhere

It works with netwire and immient, prototype i havent Heart much about, but it Will most likely work with that one as well.

It passed 14 days, only getting 2 detections, so its keeping its fud times pretty good.

The Execution rate is very high, In case it should fail to execute, the extracted crypted file Will still

be added to startup, and it Will then simply start next time the machine is being restarted.

I'm terribly sorry for going off-topic, but who made you that thread design?

Mace - March 12, 2015, 1:58 pm

LightCore 1.4 has been released:

- The extension changer is now working
- The command line parameter option is now working
- Optimized .net injections
- Optimized runpe

And of course it's 100% FUD.

Your welcome to send me a PM, but don't spam the thread.

If you get a invalid license error, you need to generate a new hardware id, using :
www.lightcore.eu/hwid.zip
and send me it in a pm with the new hardware-id.

Both yes and no, each file is very unique from each other, but av's will do ever what they can to find that small 0,1% that does not change, but it means it's keeping it's fud times, longer than other crypters.

I do have to say Mace, you have a very professional way of selling this.

I will order this as soon as i get some money on my paypal account.

Any way good luck with selling mate ;)

By the way,

Is there any possibility to see the spreading Method that your crypter offers ?

I really would like to see the way it spreads, and i don't think i am the only one wondering how it's done.

Maybe a video on showing us how it's done will improve your sales !

Btw. Hows about people whom bought DataScrambler Lifetime and you closed your service by saying that you have no time and you lost interest in it and after some time there is new tool created by you?

For example me? I bought from you three times I guess. 2x 3 months and then I bought Lifetime(because your tool was rly good) and after around 1 month you closed datascrambler. So as far as I remember 1 month subscription cost me 50usd.

vouch for this crypter. still the best one i've used on here. i just need help with 2 things.i sent you a pm but i am sure you have a lot of messages,so i will post it here too.

1..i need help with the binder. i think i am doing something wrong. i create a stub,hold ctrl and click on the stub and whatever it is i want to bind it to. i click open and the message pops up saying such and such files will be binded. but when i test it, the file i binded the stub to doesn't do anything. i can't even tell if it binded correctly or not. am i doing something wrong?

2.cure system won't work for me. i accidentally ran my stub and i can't uninstall myself. this message comes up when i click cure system:

"autoit error

line 20563 (file"c:\users\villain\desktop\lightcore\lightcore.exe"):

error:if statements must have a "then" keyword."

is ur file fud? for me it gets detected?

Mace - April 9, 2015, 12:47 pm

LightCore is down for the next few hours, due to a cloudflare problem. I'll open the thread, once it's running live again.

Mace - April 14, 2015, 10:14 am

LightCore is working again, and so is the bitcoin autobuy system, and it's 100% FUD as well.

Don't listen to the jamool above me, he clearly doesn't got any clue on how to use LightCore, whenever it's a detected icon, or assembly information he's using, LightCore has been FUD for the last week, and right now, it simply got only a detection from sophos. ?

jamool - May 8, 2015, 2:40 am

Mace this is false , i've changed the icon and tried a lot of options and nothing works ,

You should take into your consideration , i've been working in RAT development since 5 years .

Guys don't buy this Crypter , The stub size is more than 1 MG and its never been FUD , he is giving a fake scan ,

Also i've reinstalled my computer because your crypter is injected with a DC trojan .

Just to be safe guys . this is my story with Mace and his fake product .

Can you reply to the pm i sent u tho

jamool - May 8, 2015, 10:00 pm

I don't lie , everyone of your customers just make a simple test , run the crypter , watch the process carefully you'll see two EXE files starts with the program then they inject its self with windows explorer , i have Avira on my computer , if you scan the crypter and learn about the TR.GEN value you'll see its an injected Trojan encrypted with HEX , i know someone will say its a false positive , i'm with you but what about TR.GEN ? What about two exe files? why the exe files disappear after your crypter started ? or you have checked the METX feature when created the Trojan?

i believe also , the stub is injected too with his Trojan to get more victims , the stub size 1 MG i never seen crypter generate a file with 1 MG size ,

Also : Mace you're a bigger lie i ever seen , your injected crypter never been FUD , i'm don't lie and i don't scamming your thread i'm just telling the people what your product is , I'm still asking for a Refund as always .

(May 8, 2015 07:28 AM)Living End Wrote: [\[CITE\]](#) Proof that its infected with DC?

watch what i wrote above , let him give you a vouch copy and open up the crypter , you must install Process hacker to watch the process parent ,

Or he may scam you , Mace is the baddest coder i ever seen , i can also provide you with screenshot of the messages to prove his product is fake and injected .

Mace - May 9, 2015, 3:58 am

you will never get a refund, end of discussion. The stub is big because of autoit you complete uber retard.

jamool - May 9, 2015, 5:11 am

You prove your self to the people , you're just a scammer , you scammed me 25\$

I think you must learn more coding stuff to develop a crypter , i've been using Byte crypter for a while , its the best crypter i ever seen , also Royal is a great guy he's working hard to make his crypter FUD , Each 24 Hour he's updating the Byte crypter , you must learn from those people , and learn more about the respect .

And really like other guy said you product is deferent 99.9% from the youtube video .

Regards,

Mace - May 9, 2015, 5:44 am

As i said, you will never get a refund, so it is.

Mace - May 15, 2015, 6:27 am

They work by Letting you create a custom message, including a direct link, it Will then use the
victims pc, to spam it via steam and the other spreaders.

corabrickdog - May 29, 2015, 5:01 pm

Looks pretty good, definitely will be coming back to buy

bigship101 - May 29, 2015, 7:49 pm

please Mace respond to my PM, sent you message severally... pls respond is urgent.....thanks for the good job

herayater - May 30, 2015, 8:52 am

First i got 2 detections out of 34 not it's 7 out of 34.I believe it's time for an update (scanned on nodistribute)

lol123456777 - May 31, 2015, 6:49 am

Nice crypter, ill consider buying this once i get the \$\$\$ Glws ?

enteve - May 31, 2015, 7:00 am

Hello, I would be interested in your crypter, but I cannot contact you regarding payment, I'm not having Bitcoin.

Thanks.

am0rph0us - May 31, 2015, 1:33 pm

Would a RAT crypted with LightCore bypass the AV System Endpoint Protection? Any AV's that would detect it? (government, military, home AV's, Enterprise AV's?) Just asking.

Mace - June 1, 2015, 8:02 am

Endpoint? As far as what I think, that is Bitdefender, correct?

It should bypass it just fine, yes. No idea what a military or Gov AV is, Home and enterprise I know, when I update it, there shouldn't be any av detecting it. btw, and update will arrive today.

Hey man i found this interesting but i want to ask a question if someone could answer me... What does Facebook,Skype ecc... Spreading means?

pota4love - June 1, 2015, 11:51 pm

Hi mace recently now i am having issues with the pc installed your crypter with the screen suddenly went blue,can you do me a favour of terminating that from the pc and transferring my licence to the new pc?i have not used this crypter for two weeks now please i need your help regarding this,i have sent you PM for over two weeks now yet no response from you and that why i have to write it for you

pseudomethylamin - June 2, 2015, 2:42 am

9/35, the porgramm needs definety an update.

I wish i knew i will never purchase this product it's just wast of money and time

imcullenm - June 16, 2015, 5:47 am

Owner never gets back to my pm's...

Mace - June 16, 2015, 11:53 am

A great new update is just around the corner,
Sorry about the delay, but I've been working hard on this update.
The new release will be even better at bypassing runtime detections,
It's using a new encryption method as well. ?

Thinking of buying, anybody mind telling me exactly how good the spreaders are? And can you configure them? :)

edit: nvm, read thread; will buy when I have some btc at the weekend

Mace - June 26, 2015, 12:29 am

Not yet, im still working on new methods to keep it fud for a longer periode of time.

Mace - July 1, 2015, 1:24 pm

Next major release of LightCore is soon almost done.

whiteknights wag - July 2, 2015, 4:22 pm

Hey Mace, could you PM me your skype or something that I could talk to you with? Thanks

bigship101 - July 4, 2015, 8:51 pm

We are waiting.. good-luck

Mace - July 4, 2015, 10:01 pm

The new release will Use my new runpe, and a new unicode encryption method, witch should keep it fud for a greater amount of time, i'll let you all know when its released.

bigship101 - July 5, 2015, 12:38 am

OK, will it be part of the old lightcore subscription we have or it will come as a new crypter ? pls do release asap. good crypters are had to find this days on HF. long FUD will be great...thanks?

Mace - July 5, 2015, 6:22 am

Its a major update for lightcore, not a new crypter

Mr. Blonde - July 7, 2015, 4:56 am

Mace, do you have any estimated time when you are going to release the update? ?

neger20 - July 20, 2015, 1:53 am

Any news about update? Update taking so long...

keviniscool - July 23, 2015, 2:00 am

really hope he gets back soon...

Mr. Blonde - August 1, 2015, 6:47 pm

Are people that bought this software still getting FUD results or did he abandon this project?

Mace - August 2, 2015, 8:37 am

SnusMaskin, It will be back, my holiday is over from tomorrow, and I will start working on it again, the update i'm planning will keep it fud for a longer periode of time.

neger20 - August 2, 2015, 11:19 am

Good to hear you are back. I have HWID issue, i sent you PM

herayater - August 20, 2015, 3:50 pm

Any chance to another fud version? Bought 3 months license and i have only been able to use it once , after that too many detections.

?dyss?us - September 1, 2015, 8:44 am

Mace what is going on you have not update for long now

neger20 - September 9, 2015, 11:07 am

This is really annoying, i paid 60 bucks for 1 year package and no updates after 3 months...

Mace do something, just give a refudded stub for customers or something because crypter is useless.

keviniscool - October 8, 2015, 5:31 pm

mace can we get an update please? thanks.

Mace - October 11, 2015, 12:50 pm

Here's a little sneak peak:

I re-wrote it from scratch.

LightCore was based upon DataScrambler. I coded this new crypter from scratch, it's far more optimized than DataScrambler / LightCore. It won't have as many options, but it will be a lot more smooth, and the code behind it is a lot better than any of my previous crypters.

1-Year customers from Lightcore crypter will get this update when it's ready.

The name won't any longer be Lightcore, I'm very open to suggestions for a new name for the crypter.

neger20 - December 3, 2015, 10:19 am

Looks like new crypter never will be released, slowly my license is expired after 1 year :(

Mace - December 24, 2015, 5:24 am

Sometime it WILL be released :).

neger20 - December 26, 2015, 2:38 am

but my 1 year license will be expired it is funny :(

Mace - December 26, 2015, 3:02 am

neger20, no it won't when it's released you will of course be given a new license :)

Nice GUI. When will you release it. ?

Mace - December 26, 2015, 4:41 am

I'm working pretty insently on it, to get it released very soon :)

neger20 - February 10, 2016, 12:53 pm

looks like it will be released in next century...

Both yes and no,

The thing is, i'm not releasing it before it's as perfect as I want it.

Today I made the binder work with multiple files.

Take note that MetaScrambler is written from scratch, it's not like LightCore or DataScrambler at all.

The fake message option is working as well, so the last thing is the asm changer.

This is the final design:

officialgxc - February 21, 2016, 8:46 pm

Sorry but nothing beats Datascrambler(the time you owned it). I remember the first time you hit the sales thread with it I bought it. One of the second best crypters I used on HF (after Cryptex). If you say this will be better than Datascrambler I will believe you.

Mace - February 22, 2016, 7:44 am

It depends what you prefer. If it's a lot of features, where most off them probably will be useless, then DataScrambler was indeed the best.

If you can more about simplicity, and hopefully even longer fud times, even DataScrambler had quite good FUD times, then MetaScrambler is the way to go.

Not to judge any crypter here, but Cryptex got .net dependencies, that's a big nono for my taste ?

mostloverguy - April 4, 2016, 7:28 am

please when are we expecting your crypter? i am really waiting

Demoralise - April 9, 2016, 7:37 pm
