You need an API for that.

Search around, you might find some free ones.

Nyan Kat - January 27, 2015, 10:43 am

#Facepalm...

You need a skype Resolver API lol.

Then you'd wanna do something like this

```
Dim wbClient As New System.Net.WebClient
```

```
Dim strIPAddress As String = wbClient.DownloadString("APIHERE" + TextBox4.Text)
```

```
TextBox2.Text = strIPAddress
```

A??? - January 27, 2015, 10:49 am

how much does it cost? D: becuz i cba to pay like \$10

Okay, i got an api, what code do i use to make it work?

LijpeMD - January 27, 2015, 11:00 am

Retard, don't post your API here, PM me and I'll help you.

You actually shouldn't be creating a 'stresser' when u can't do simple webrequests.

Killer360Hacks - January 27, 2015, 11:21 am

I can help you with the code pm me. I also have skype resolver api's :D grabdataskype.com

nathan72389 - January 27, 2015, 11:25 am

you should add a calculator along with it also.

A??? - January 27, 2015, 11:31 am

Eh, dont be mean :(i only just started learning D:

Still looking for help!

And i might pay for help!

Ninja - January 27, 2015, 12:54 pm

You only started learning and coded your own stresser? Anyways, the API URL you got should speak for it self. If you look at it you will see you have to enter a username behind it. That means that you have to download the webpage of the URL + the username. Then from that webpage extract the IP (or if it only outputs the IP this isn't needed).

Poppy - *January 27, 2015, 7:09 pm*

umm srsly dude

```
Code Dim Web As New Net.WebClient()
```

```
    textbox2.text = Web.DownloadString("yourapi/username=" & TextBox1.text)
```
