Thread: [TWITCH stream help please](#)

Calvin and Hobbes - January 27, 2015, 11:47 am

I need a simple script for my twitch top donator section

i want to avoid millions of OBS layers

i really need to import a txt file that's on the pc. and display its content in an existing div tag. maybe with a timer to recheck every 3 sec so i avoid refreshing whole site Constancy

Please pm me if you can help !!!

I never did stuff with twitch but are you sure it's Java? Seems to be more like JavaScript.

OGxPRED - January 27, 2015, 2:59 pm

use twitch alerts. There are about 5 softwares already out there, and why do you think one of us would do it for free?

You mentioned a site, use AngularJS to provide "live" functionality. You can do plenty of awesome things with it.

Also what you asked for is JavaScript, not Java. ?

Example Steps [\(Click to View\)](#)

- Setup webpage
- Setup/find an API to display top donators (preferably in JSON format)
- Have Angular perform a HTTP GET on aforementioned API
- Use the ng-hide directive to hide the donator list and display a "Refreshing" gif or CSS animation
- Once request is complete hide the refresh gif
