Thread: [Syncrinozation time with network fluxuates](#)

FRANKIE - January 28, 2015, 11:39 pm

I have everything setup right.

The clock
The Config things
Everything

It has been stuck between 2-3 hours for the past 2 days.
Please help.

Doctor Blue - January 29, 2015, 4:56 am

It sounds a lot like a time discrepancy. You say the clock is set correctly, but is it also under the correct timezone?

As for the configuration, how did you set it up?

FRANKIE - January 29, 2015, 10:01 am

I made a thread prior to this one asking for configuration help so I know that is setup right.
Let me mess with my clock and see if I can get it straight.

Aceman - January 29, 2015, 10:02 am

May I hop on TeamViewer to take a look in a few hours when I have some time available?

I very much appreciate the offer but I do not have TV.

A while ago someone took advantage of me / stole my BTC using it somehow and ever since then I just don't use it anymore.

Log out of your wallets prior to using TV.

I'd take Aceman up on this if I was you, he's one of the more trusted members here.

I don't doubt his trustworthy ability to do anything I just have a problem letting people on my computer. Paranoia is a sick thing my friend.
