Thread: [\[TUT with Pics\] proof of concept ratting from android with java rats \[JRat\]](#)

PolarBeats - January 29, 2015, 4:19 pm

Running a java Rat on android

First off you are going to need the following things

Rooted android phone

Linux deploy and Android vnc viewer

at least 4G on your internal storage or SD card (i suggest a 8G sd card)

Also there is a video tutorial on running linux on android so you could just watch that

<https://www.youtube.com/watch?v=uZ2eDb9EjzE>

now lets get started

im asuming you already installed the apps

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/01e01b82116fa3f144423263ceff186d365020.png[/img]

now go to linux deploy and do the following

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/d71af521f2d6928785a645192751395456583.png[/img]

go to linux deploy and click "properties"

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/7e641d36094f0aaa243f5ea4c2eaccb068618.png[/img]

i did this on ubuntu however you should be able to do it on any distro

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/cf3c7a0dfd3e6c8794f1fa93b79af88b66761.png[/img]

i selected "trusty"

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/250bc99871264f70684439d232e625a572605.png[/img]

now you might want to move the install path to your sd card, dont worry it wont hurt anything on it

ok now that you have done all of that you click "install" and wait until it finishes, next just click "Reconfigure" and when that is done just click "start"

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/bf780da4887531e92510058c57e4e7fc50327.png[/img]

ok now is when you connect to it, go to Android VNC viewer and make a new connection, you can name it anything you want but make sure you have the following settings

adress: localhost

port: 5900

password: changeme

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/aa0bfa23046ecd02370881e891ae0f0a189625.png[/img]

Now you should be connected!

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/9d7fa5da643c9f29bfe215e4140c9120188807.png[/img]

now open terminal and type the following commands also when it asks you if you want to install it the type "y"

```
sudo apt-get install firefox
sudo apt-get install open-jdk-7
sudo apt-get install ark
```

Running Jrat

note i have only been able to get java rats to run as i could not get Wine to install, if i get it to install i will post a new tutorial

first download Jrat [Here](#)

next go to the .zip folder and extract it

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/aa0bfa23046ecd02370881e891ae0f0a189625.png[/img]

i extracted it to my desktop which will work,
now open a terminal and type the following commands
cd desktop
java -jar Client.jar
OR
java -jar /path/to/file/Client.jar

Spoiler ([Click to View](#))

[img]http://bluefile.biz/files/dfa6629499eb873a21191368b9a52ffe94185.png[/img]

Now it should be running

i have not tested this with bots yet, if someone does please post the results also in theory this could work with a VPN so you could rat almost anywhere.

please take a few seconds to say thanks if this thread helped or leave feedback or questions, i will gladly help

The Scarabian - January 30, 2015, 9:50 pm

I do this on iOS with TeamViewer. Works like a charm.

VladimirDracula - January 31, 2015, 3:17 am

It pains me how you give the instruction "install linux on android" cri evri tiem

(Jan 30, 2015 10:50 PM).Sebastian Wrote: [CITE](#) I do this on iOS with TeamViewer. Works like a charm.

Well you could do that to but all I was showing is that you could run a rat from your android phone without a pc or vps

The Scarabian - *January 31, 2015, 8:04 am*

I understand, but its 10x easier to install teamviewer on both devices. Until a RAT developer specifically make a client for iOS or Android, im sticking with teamviewer.
