Thread: [Server has been compromised, hacked, email hacked, everything hacked.](#)

**theoldbrit** - January 29, 2015, 6:13 pm

Please help, i have no idea what to do in this situation.

Some guy named Putay came onto my server, acted like a tough guy  
"so you wanna get booted" "im op" blah blah blah

Didn't believe any of it, went back to configuring plugins.

I come back maybe 3-4 hours later with 2 players spamming my skype "Someone /killed me and banned us!!!"

I hurry and check the mutlicraft, "Password has been changed."  
At that moment, I'm panicking.

I go to my email, "Password has been changed"  
I am so fucked in the ass right now.

His FTP username - funnygatt  
Email - chandlerdesign@cox.net

Changed every single thing I own except for a few things registered with other emails , thank god my hf isn't hacked.

At this point, what can i do?  
They secured every single thing, i can't do anything  
I got console back and they just changed it.

I can't do anything, someone please help me.  
I have no clue how they got any of my information, very hard password, etc. Could they possibly rat my phone??

Please help, or is shockbyte just complete shit.  
WHAT IS HAPPENING?! I HAVE NOTHING. COMPLETELY NOTHING.

**FRANKIE** - January 29, 2015, 6:14 pm

Holy fuck man I am sorry to hear about this. I would remove the email but you could post in the request for hacking section.

Hopefully you can get your stuff back man. That really blows.

**Nullware** - January 29, 2015, 6:17 pm

Dang, that sucks. If i were you, I'd reset my PC completely to insure he doesn't have you ratted.

**Hayley Williams** - January 29, 2015, 6:18 pm

What host are you using? Some are way too easy to shell into.

**theoldbrit** - January 29, 2015, 6:23 pm

My host was shockbyte, i have no idea how he hacked anything.

Admin'd himself on the multicraft and changed everything.  
EVEN CLOSED MY FUCKING YOUTUBE.

I have a mac, can i still get ratted or whatever? I heard they were harder to get virus.

Someone please help me, anything.

Email changed, buycraft changed, website changed , domain changed, Life - changed

**Simply™** - January 29, 2015, 6:24 pm

Sounds like a noob who has nothing better to do. Factory restore your computer first of all, then proceed to slowly gain access back to your accounts. Good luck, sucks that this happened to you!

Macs can still get viruses, just (usually) not in the form of an exe file. You were probably infected by either a RAT, or Keylogger.

**????** - January 29, 2015, 6:25 pm

Most likely got you with a RAT.. you should probably clear all of your cookies and try to call customer support of multicraft. Also try not to save passwords, as they can be stolen if you are infected. Anyways.. good luck I hope everything gets working again.

**theoldbrit** - January 29, 2015, 6:35 pm

My domain was changed, everything.

Is there anything i can do? I haven't even downloaded unsafe files other than spigot plugins.

Can anyone do anything to him?

**P?ris?m** - January 29, 2015, 6:46 pm

You could get a DOX done and I don't know what to do from there. But as of now just slowly contact every support for every product he stole. Also factory reset your computer.

**SIM-2124254** - January 30, 2015, 6:07 pm

I have a question were you using the same password on every site? If so that was mistake #1.

We're you using short/common/insecure passwords.

You could also try <http://www.bitdefender.com/solutions/virus-scanner-for-mac.html>

The main thing you can do right now is to contact each sites support, it obviously won't be a fast process but you'll need to do it.

**iToady** - *January 30, 2015, 8:13 pm*

First off, scan your computer for something like a keylogger or RAT.

Contact whoever you registered your domain with, they might be able to get it back for you.

And for the server, just restart I guess :/

**Rippin™** - *January 31, 2015, 3:10 am*

Most likely ratted, as they got a hold of your emails and accounts.
