Thread: [\[Basic\] Native](#)

KingDeath360 - January 30, 2015, 6:14 am

I made this project for 2 reasons.

To make C++ cross platform and to make it harder for VB.NET apps to get decompiled

But just forget about the first reason..

Some of you may find this useful some wont

Currently supports:

[+]Strings

```
[+]Console.WriteLine( String)
```

```
[+]Console.ReadLine()
```

VB.NET side, download: (Atom)

Code MoAJn2gtbDwa0m0mOxLB+IH5nxcqnIHsOxTa+Dc6KjTuKm130jTq+oHtC++ side, download:

<http://www.filedropper.com/ctovb>

- tl;dr; Converts some VB to C++, makes it harder to decompile

Ninja - January 30, 2015, 8:12 am

We can just use obfuscators to protect our files and prevent decompiling. Nonetheless good work though!

pgorangeman - January 30, 2015, 8:24 am

Very good work sir, nicely done, i like

Please refer to this thread: <https://hackforums.net/showthread.php?tid=2189273>

to quote:

Code 1. The JIT in .net is too easy to hook to get the code 100% back

2. There are just too many deobfuscators/dumpers etc... e.g. .Net Reflector, SAE, SND dumper

3. .Net is just too easy to decompile doesn't even matter if its encrypted/obfuscated etc

tl;dr; .net obfuscater's don't work, We need a new solution

lelelelelelelelel.

VirtualNet is a mini .NET framework.

tl;dr; .net obfuscator's don't work, We need a new solution1. Jit can be hooked, but so can the obfuscator as well.

2. talking about deobfuscators but didnt named a single one: reflector and sae are decompilers although sae has a small deobfuscator build in.

3. nope, fyi try to unpack confuserex and tell me how easy it is
