Just upload the source too. I dont think anyone will download this, and as its your first program in vb.net it would be pretty easy to see its source anyway.

No description on how the program works / what it is / what it does.

I would use extreme caution.

This pretty much, no one will help you/give you feedback like this.

I checked the source a bit, things look malicious for an account security application.

DO NOT DOWNLOAD/RUN THIS.

Looked over it and it's fine to use.

Very nice.
