0077bed9469f840e21bf51b01a25b93c:&Ze;z

Format

(some type of hash?):(Salt?)

Could someone help me figure out what these are?

These are IPB hashes. The last one looks like its missing a character in the salt though. Salt's should be 5 character for this I'm pretty sure.

Fix the third one and i'll crack it for you.

Fix the third one and i'll crack it for you.Oh thanks!

The last character in the 3rd one is 'z'

I'll add it now

What is that then? :)

That's and MD5 hash. The system looks something like this:
md5(md5(\$salt).md5(\$plain_pass));

which translates to this format roughly:

0077bed9469f840e21bf51b01a25b93c(4ac13e76236c5b05e1d877fa30c8df71(&Ze;z).59cf5e5cec5bb6366144f9cb2a6c568c(hunterdustin))

so

0077bed9469f840e21bf51b01a25b93c:
4ac13e76236c5b05e1d877fa30c8df7159cf5e5cec5bb6366144f9cb2a6c568c

Damn you're quite good at this.

I'm glad to have proof that not all HF members have autism as many state over @ LF..

Thanks a lot dude!

If it wouldn't be too much, how do you crack this code?

I'm running oclhashcat with a large dictionary and some custom rules.

O_O

So fucking complicated lol

Is there an easy way for me to do it so I won't have to bother you for a while? ?

If you cant figure out hashcat, you can just keep posting the hashes here and I or someone else will help you crack them.
