Send Time

The send time is near instantaneous. I sent five messages to my personal phone which was AT&T and before I could even look at my phone (which mind you was right beside me) I heard it ringing and buzzing like a mad man (and it was still only 5 messages!).

Pricing

I have not used many sms bombers, so I am not able to accurately compare prices to equivalent products on the market. I can however compare it to one product which I was going to purchase, and it was SLIGHTLY cheaper, however it didn't offer spoofing like this SMS bomber does. Most other sms bombers also require that you use your own email account. This does not. Meaning all messages are sent completely anonymously, and with the spoofing of mass messages, people can not block the numbers, and therefore can always be spammed.

GUI/Ease of Use

The GUI used for the bomber is absolutely AMAZING. I'm completely in love with it. It makes things extremely easy to use, and makes sure you know what you're doing. It could use a little centering here and there (in my PERSONAL opinion) other than that it's great. And the only thing you have to do to actually bomb is put in a number and select a carrier. Ease of use is something you WILL NOT

have to worry about with this bomber. And another little edit here, this is all HTTP based, so there is no need to download programs, and the autobuy works perfectly!

Send time: 10/10 Pricing: 10/10 (For features included) GUI: 9/10 (GUI was updated, perfect, but still have seen better, up'ing to a 9!) Ease of Use: 10/10

The only complaint I have would be the 30 minute cooldown on spamming from multiple numbers. Of course you can max out the amount you send and make sure that it's well worth the 30 minute wait. High on Quack has previously announced already that he will be reducing the time when he picks up better servers, which is absolutely amazing. I would highly recommend this product to anyone looking to purchase an SMS bomber. Can this not spoof from address's in such a way every text shows up individually? Number/address can easily be blocked or ignored when your spamming from a single address.. Plus would be much better tool to be sending multiple text cause phones these days will just have all text together and can easily delete at once but if receiving 1000s individual ones, well I'd buy that..

Ya, now that looks more like it. Do you automatically have it continue on 1,2,3,X forever? And when you say up to 500 text at a time, exactly what is this time? 500 sent within a few seconds/minutes? Then can repeat as desired?

**High On Quack** - February 2, 2015, 5:10 am

And yes, It automatically continues increasing the number.

All the emails are sent almost instantaneously, they come in like 250ms after each other (on Verizon at least)

There is a Cooldown until I get a better SMTP server.

Recommendations:

- Improve server for harder hits with less cooldown time
- Add history of past text attacks with option to submit same attack or delete
- Show a progress bar of some sort

not working with many russian and german carriers . it would work when the "victim" has email2sms activated

this service cost 0.1€ per sms in germany  
in russia a bit cheape

but still this is useless maybe if you want to spam us ppl ..

and who was this smart guy who send a mass mail with this good privacy ?

I see. I was able to spam the number again using other spammers and your average gmail spammers. Any way you can spoof your IP when you send?

**High On Quack** - March 3, 2015, 4:23 pm

I am looking in to this. The reason gmail spammers work is because gmail is a trusted SMTP server. My SMTP server is self run and not well known

I will either use google as a relay or have many servers to send the messages out.

Vouch! Payed with paypal and was able to bomb immediately after purchase. So far very intuitive, however not incredibly reliable. I requested 1,000 messages to be bombed to my phone, but it all stopped at 227.

Plus, the most messages you can send at a time is only 1,000. I don't know why the thread still advertises 10,000.

Hi purchased this really impressed so far by the ease of purchase and speed at which I was able to begin using your product which has a very clean interface, unfortunately I am having a few problems would it be possible to PM me (Tried and said your inbox was full).

This is related to UK carriers, would it be possible to add them to the drop down list so this is more ready to use for international customers?

Thanks,

You should never sell a broken product in the first place. If it works for couple of days, I will close the dispute. I don't really give a shit about the money. I opened the dispute so you can feel the anger I feel . I think you got the message now.

**High On Quack** - March 23, 2015, 9:21 pm

It was not originally broken, and I had fixed issues like this in the past with no problems from buyers. Thus issue was just a weird issue that took me a while to figure out (this is separate from the disk space issue)

BTW 15 DAYS HAVE BEEN ADDED ON TO EACH EXISTING LICENSE!!!

**Senate** - April 11, 2015, 8:36 pm

if i have a similar sms crasher, do they all work the same way? thank you im just wondering it would be great if you could tell me.

**GhostNLMB** - April 11, 2015, 9:23 pm

You said you would contact me havent yet? This isnt working

**Credit Union** - April 12, 2015, 9:09 pm

Just purchased this today! Awesome works great and is super fast!

**funtela** - April 12, 2015, 9:18 pm

Bought it :)

Your thread says 10k messages per send but the max I can do is 1k :p

Thank you for purchasing we are currently transitioning to a new owner.

**FuxXER** - April 18, 2015, 6:51 am

My issue still not solve yet. Still not sending any sms in my country! i wait a bit long here ..grrrrr

**Ghostwork** - April 18, 2015, 5:24 pm

Does this support t-mobile UK?

Lmk if it does.

**BlackRockShooter** - April 18, 2015, 6:11 pm

Does this also work for providers in the EU?

**Frankstare** - April 18, 2015, 11:35 pm

"½" you can use that for your title :) Love your name, ha.
