Thread: [Auto Refresh DIV without refreshing whole page](#)

**Tony Stark Sucks** - February 6, 2015, 4:29 pm

I need to auto refresh a div containing an iFrame, I've tried a lot of tutorials online and nothing I use works. Any help is appreciated, thanks.

Use jsript or Ajax I'll try find some code

**brewery** - February 6, 2015, 4:36 pm

Assuming you mean to refresh the content inside the <iframe /> in the manner that you would refresh your browser window, use the following JavaScript command:

```
Code document.getElementById('#myIframe').contentWindow.location.reload();  
Or switch out the document.getElementById("#myIframe") with a jQuery $("#myIframe")
```

Hope this helps

Here is some code

Code html

```
<div id="res">Primary content</div>  
<input type="button" value="rel"></input>  
Code jsript(add JQuery)
```

```
$(document).ready(function(){  
$("#rel").click(function(){  
$("#res").html(ajax_load).load(loadUrl);  
});  
});
```

**Tony Stark Sucks** - February 6, 2015, 4:46 pm

I need it to auto refresh every 5 seconds, not from user input.

**Jokeh** - February 6, 2015, 5:19 pm

Try this

Code jsript(add JQuery)

```
$(document).ready(function(){  
$("#rel").click(function(){  
$("#res").html(ajax_load).load(loadUrl);  
}, 3000);  
});
```

I think something like this should work.

HTML:

Code <iframe width='800' height='900' src='http://w3schools.com' id='w3frame'></iframe>

JS:

Code window.setInterval(function(){  
 document.getElementById('w3frame').src = 'http://w3schools.com';  
}, 5000);

Working JS Fiddle: <http://jsfiddle.net/d8c5t13x/>

Reloads the Iframe every 5 secs. You might run into resource origin issues though. If same origin is enabled on the server, you can also do this:

Code window.frames['nameoftheframe'].location.reload(); Similar to what edgedev has suggested already. Hope that helps.

Maybe you should not use iFrame and start using real technology instead.
