Thread: [Northern lights](#)

MeIT3d - February 6, 2015, 10:35 pm

Just looked outside and saw Northern Lights over the mountain. They don't appear a lot where I live, so it's pretty cool.

Do you guys ever see it? If so, how often?

EDIT: You can talk about the Strain if you want.

Russ. - February 6, 2015, 10:37 pm

I have seen them once, went on a trip and we were out some night no idea what we were doing. The only thing I can remember about that night is the Northern Lights. Wish I can see them more!

Sharkitaxe - February 6, 2015, 10:46 pm

I thought this was gonna be a weed thread.

Nads - February 6, 2015, 10:48 pm

I have never seen them, but I think that it would be such a cool experience. I hope that I will someday.

1700block - February 6, 2015, 10:48 pm

I've smoked it a couple times, thats about it..

vFlake - February 7, 2015, 1:28 am

I live in finland, so I see them quite often!

DARPA - February 7, 2015, 1:32 am

Can someone put a picture up for us dumb cunt aussies ?

Isn't there an equivalent phenomenon down under?

The Southern lights?

AAA+ - February 7, 2015, 1:57 pm

I opened the thread because i thought it was the strain HAHAHAH :faceslap:

Repeat - February 7, 2015, 2:02 pm

I usually see them at my cottage every summer, beautiful sight.

Hidden Pain. - February 7, 2015, 2:02 pm

I have never seen them but want to really bad, probably gonna include them in a trip

The Southern lights?

"In northern latitudes, the effect is known as the aurora borealis (or the northern lights), named after the Roman goddess of dawn, Aurora, and the Greek name for the north wind, Boreas, by Galileo in 1619.[6] Auroras seen within the auroral oval may be directly overhead, but from farther away they illuminate the poleward horizon as a greenish glow, or sometimes a faint red, as if the Sun were rising from an unusual direction. Its southern counterpart, the aurora australis (or the southern lights) , has features that are almost identical to the aurora borealis and changes simultaneously with changes in the northern auroral zone.[7] It is visible from high southern latitudes in Antarctica, South America, New Zealand, and Australia. Auroras also occur on other planets. Similar to the Earth's aurora, they are also visible close to the planets' magnetic poles. Auroras also occur poleward of the auroral zone as either diffuse patches or arcs,[8] which can be sub-visual."
