Thread: [Suggestion to help noobies get started](#)

NoMercy - February 7, 2015, 8:54 am

This is a simple but effective idea. Why don't we just integrate a miner into the desktop wallet? We could have two versions of the wallet one with and one without. This would make it make it so much easier for the noobies to just download it, enter their details and press "mine" then the OMC gets sent straight to their wallet.

I'm shit at programming so I don't know how it would be done but I'm sure it wouldn't be hard for you guys with your tons of experience.

Feedback would be nice.

There is already a miner inside the desktop wallet.
Open the debug console and type "setgenerate 1"

The only problem with this is it is just a CPU miner and doesn't use a pool, so it would days or weeks to even get any.

It could be setup to work on a pool with GPU, but it wouldn't be very easy.

Really? Shouldn't we make this more obvious to people?

Yeah but Lincoln, remember what John F Kennedy said when we landed on the moon. "We choose to go to the moon in this decade and do the other things, not because they are easy, but because they are hard, because that goal will serve to organize and measure the best of our energies and skills, because that challenge is one that we are willing to accept, one we are unwilling to postpone, and one which we intend to win, and the others, too."

And we want OMC to go to the moon, right? ;)
