Thread: [.NET SEAL 2.0 security protection ?? \(How to avoid netseal cracking\)](#)

IV4NN - February 7, 2015, 10:31 pm

I've heard that many of programs that have NET SEAL license is being cracked.

I get alerted when I heard that, So I want to know some guides about security of this and how to avoid cracking my net seal.

Thanks in advance

KingDeath360 - February 8, 2015, 5:48 am

Code NET SEAL license is being cracked. Net seal is a license system, your meant to add your own protection.

iamskid - February 8, 2015, 5:55 am

I am sorry to break it to you.. but you can't.

The problem with .NET is that MSIL is a lot easier than x86 assembly.

You can make it load your application from server on successful authorization, this will stop cracking from people with no license.

However, they just dump it and its cracked.

In all other cases, they can just switch a if statement to false and any invalid username/password will be valid.

All obfuscation really does is make finding the correct if statement a little harder.

There is really nothing you can do.

What u talking about? This forum so HQ that 2 weeks after joining and learning VB.NET basics people are already saying ultra best crypters and keyloggers 100% not copy+paste 100% understanding what PE realign is and advertising it as feature for keylogger.

RandomUser123 - February 8, 2015, 6:47 am

I think the same Odus said.. How can he ask how to do "If TextBox1.Text ..." and now ask for a licensing system security fix?

Stop making this section full of trash-threads..

Marwix - February 8, 2015, 7:05 am

You can always try to code your own unicode obfuscator using Mono.Cecil.

Have in mind that you can't protect your software up to 100 % because there will always be a way to crack an application.

Maybe soon :) However its a paid software!

You could always host critical information that ilare required for your program to work in the variable hosting section of netseal.

That won't work, it's easy to get NetSeal's variables.
