Thread: [Exploit Packs](#)

lowcodez - February 8, 2015, 6:42 am

Hey, i have a few exploit pack related questions. i hope this is the right section for them.

I am new to exploit packs and stuff so i am curious what types of exploit packs are there? What's the usual infect rate and price? And do i need more than just the exploit pack and traffic?

I would be happy if someone experienced could take some minutes and answer these questions.

Lowcodez

Raoul Duke - February 8, 2015, 6:44 am

What you need is:

- a bot
- a crypter for your bot
- exploit pack
- traffic

For the exploit pack I suggest you to take a look at my signature.

iamskid - February 8, 2015, 8:04 am

You also need a loader that is very small in size ~40 KB max. ~40 KB max crypted i mean. So shit like LoadHTTP will fuck your execution rate. Anything over 100 KB is not worth using on exploit kit.

.Data_ - February 8, 2015, 9:04 am

A lot of loaders offer the option for memory malware now (good ones, not shit like rig). You can get a good dll downloader that's small and mobile.

Ok so you don't know the difference between a loader and an exploit kit...

Erhm , sorry to contradict you , but loadhttp has a stub of 32kb ? , of course when it will be crypted his stub size will grow

immortalwon - February 8, 2015, 9:49 am

Most Exploit Kits do not show the real LOADED rate. The real loaded rate of exploited machines depends on your crypter. FUD.PE has a total of %10 percent rate when used an exploit kit. For example lets say you have 5k loaded bots (means exploited), only 10 percent of those bots will be loaded on your net. Most decent crypts have a 40 % rate. Do the math.

I woke up retard, I know far more than you.

lowcodez - February 8, 2015, 10:38 am

thanks guys for the information. Its a big help

(Feb 8, 2015 10:49 AM)immortalwon Wrote: [\[CITE\]](#)

Thats stupid. Either your crypt work or it doesnt.

The reason youre getting low rate to exe is shit traffic.

Then theres .net, file size and what not but the main reason is shit traffic.

A: You use bullshit malware thats hips detected

B: You use bullshit crypter thats hips detected

Which is it? Or maybe its both?

40% exec rate is fucking pathetic.

So? 32 KB + shitty HF crypter = > 100 KB.

Crypt LoadHTTP with an AutoIT crypter LMFAO!

How would you define "shit traffic"? How does it contrast to "good" traffic?

Dude, it's the binary that matters and the crypter used.

The traffic doesn't fucking matter unless it's botted shit.

Rhodos - February 8, 2015, 12:58 pm

Sorry for gettin into this thread, so 40% is pathetic, what is a decent %? And how can u achieve it? I mean, u were talking generally, good traffic and good crypter? Like what?

Snotaapii - February 8, 2015, 1:09 pm

We'll it all depends on:

Traffic (What country they are from.)
Exploit pack (Is it detected by some AVs?)
Exploit pack shellcode, rotation etc etc
Your bot size, is your bot detected by some AVs?

You'll need to do alot of testings to find out the execution/infection rate.

40% exploit rate is omfg fucking amazing. So far i've seen only Rig do it on BR traffic.

40% malware execution rate is pathetic.

theranger - February 8, 2015, 1:21 pm

Why is BR traffic especially shit? Or VN? Or MX?

Does no-one in these countries ever update their browsers?

A lot of people in these poor country doesn't have computer education. There is a lot of cracked windows without updates or antivirus.

Dude you can get 60% average excution rate if your bin and crypter is good enough, Traffic will be not matter until it was not booted , Please Learn the shits first .

0x43 - February 8, 2015, 2:45 pm

If you are looking for a exploit kit contact me =D @bull add me on jabbbber. Buying 100k traff

Totally agree with Bull on the execution rate.You wont get good rates with infected traffic,you need real fresh traffic to achieve this.
