So far 1 stub has been sold.

I must say this is one of the most advanced I have seen in the market, good luck with sales.

Che Guevara - February 9, 2015, 10:14 am

Jealous much, lol.

Anyway online and taking orders. Any questions PM me.

A new crypter with a lower price will be available soon.

Yes, not yet on this forum but I am getting asked alot about it. Once people try the quality they will understand why the price is higher than other crypters.

A more advanced version is coming out soon. I am not posting here much until it comes out.

Sw?er?ve - February 15, 2015, 1:33 am

GLWS! Che Guevara knows his shit about crypters

Kill?Muvz - February 15, 2015, 3:47 am

Apex crypter is out, would like to see which one is better!

Che Guevara - February 15, 2015, 4:39 am

This is polymorphic mate. I hope people stop rating the thread 1 star. Shows too much jealousy.

Gamer222 - February 15, 2015, 5:36 am

1. Does it bypass HIPS? I assume it does not if runpe is used? What about other execution methods?
2. Does it bypass av memory scans?
3. I assume it has strong USG, what fud time could i expect with little to no spreading say 20-30 installs?

Che Guevara - February 15, 2015, 5:46 am

- 1- It bypasses it

2- It does

3- It does not use USG shit. This is a polymorphic crypter. It uses a polymorphic engine to mutate while keeping the original algorithm intact. That is, the code changes itself each time it runs, but the function of the code (its semantics) will not change at all so each output will be unique.

For 20-30 installs it will last long. I have clients with 1 month FUD times.

HIGH PAID FELLA - February 15, 2015, 3:31 pm

Legit dealer, got succesfull deal with this user.

Che Guevara - February 16, 2015, 6:13 am

Thanks for the vouch mate.

New update will be available within 2 days.

Peter - February 16, 2015, 5:03 pm

This crypter is pure shit.

Has a very small fud time and as soon as I say something to support, tells me to fuck off and they will get to it when they can.

Bad experience with this, be hesitant on purchase.

I did buy it you piece of shit.
I don't care if you posted on my scam report, I just don't like posting shit to trash sales but this was the biggest waste of money ever.
I've seen crypters made by 12 year olds better.

Functions are fucked up, low fud rate and support is useless.

I don't have trust on HF crypter , I would like to take a test crypt first before to Buying it .

Axiomatic - February 18, 2015, 6:58 pm

Vouch for Che. He is very trustworthy and cooperative — an all around a pleasure to work with.

Nou4r - February 19, 2015, 6:24 am

I'd like a test crypt before i buy. As mentioned by Bull, you can never trust a Crypter posted on HF.

Che Guevara - February 19, 2015, 6:24 am

Thanks for the vouches guys. Almost done with the new update.

(Feb 19, 2015 07:24 AM)Nou4r Wrote: [\[CITE\]](#) I'd like a test crypt before i buy. As mentioned by Bull, you can never trust a Crypter posted on HF.

No free test crypts. Either buy one crypt or I can show you the process over TV. If you really know about polymorphism then I can show you the difference of 2 crypted exes.

Comedic - February 19, 2015, 6:32 pm

This is one hell of a crypter. You have my vouch too dude. GLWS

Vouch for Che Guevara, seen him around and he knows his shit.

This is not your average saturated shot UD time HF crypter.

GLWS!

Che Guevara - February 21, 2015, 7:53 pm

Thanks man.

Online and taking orders.

The Scarabian - March 1, 2015, 12:22 am

What do you mean by 150\$ per stub? Does that mean I get 1 crypt or that you give me a crypting program with a stub that only I have?

Means you get a private stub not shared with anyone else. You can crypt several times using it until stub gets detected. Each output is unique by the way.

Sales will be open again tomorrow. New update will be ready.
