Thread: [HTML help onclick="startGateway\('XXXXXX'\);"](#)

Warren Buffett. - February 10, 2015, 6:02 am

Alright guys I have been using a template since a while now on my blog for CPA and I wanted to change a bit of code but I have a little problem.

My current code is:

Code `DOWNLOAD`But I don't want it to follow the link Quote:<http://www.ultrapay.org/link.php?id=1128>

but instead open up the widget Quote:`onclick="startGateway('XXXXXX');"` and yes I have edited in "head" with Quote:`<script type="text/javascript" src="http://fileice.net/gateway/mygate.php?id=5075446a476a43426b774132514e383d"></script>` If anyone here could help me that would be truly great ?
PS:Yeah, I don't code

Crypto™ - February 10, 2015, 12:16 pm

There are a couple different ways.

1:

Code `onclick="event.preventDefault();startGateway('XXXXXX');"`

2:

Code `onclick="startGateway('XXXXXX');return false;"`

-snip-

If you use an image or a button, it should just work. If you use a link, those should both work.

Actually, if you're using a link, try doing this instead:

Code `<a href="javascript:startGateway('XXXXXX');">Click</a>`

[Demo](#)
