Its currently 1/40. I have no reason to believe that will change to drastically. But I also can't promise it will be FUD forever. Although it will function with all the crypters on the market.

JuiceProductions - March 12, 2015, 3:57 pm

I believe there's a typo on the thread designs intro

"there" should be "their" If i'm mistaken.

My internet has been very bad the past few days and I've been unable to get onto skype. Please pm me with any concerns !

GosthMan - April 12, 2015, 11:51 am

I'm unable to pm yet but more or less i solve the issue by disabling the password stealler.

With the password stealler on it was giving an error on the target pc saying that it can't access and file because is in use by another software.

By doing this the keylogger works ok and without issues.

Thank you and you have my Vouch
