**Purefication** - February 11, 2015, 3:04 pm

Hey guys, so I am going to try and help you with the knowledge I have so far, you can ask me for any stock and I will -try- to build a decent chart for it, I havent been in the market for so long but I do believe I have a sharp eye for them, have fun !

\*Investors should be cautious about any and all stock recommendations and should consider the source of any advice on stock selection. Various factors, including personal or corporate ownership, may influence or factor into my stock analysis or opinion.

So I am going to put up a few common ones around the forum so first

EXXI  
( Energy XXI Ltd. )

It's a 50 50 gamble to hold this one for long, it can go both ways and an important factor here is the oil, it has a confirmed resistance and support levels ( Black lines ) but nobody knows yet when it's gonna breakout and to which direction so you want to buy/sell/short after a confirmation ( purple arrow )

<http://prntscr.com/63ntdy>

<http://prntscr.com/63zchy>

AAPL ( Apple )

Basically APPL has reached 700+ Billion market cap recently which is crazy, and as you know it's a strong soild company, as long as the market stays green or AAPL should keep the uptrend.

AAPL has formed two patterns recently, head and shoulders and a triangle ,two great bullish signals and it's probably gonna keep going up to 130 area.

<http://prntscr.com/63xrqt>

<http://prntscr.com/63yv3s>

<http://prntscr.com/63yxzs>

TSLA ( Tesla Motors )

I dont know that much fundamental wise about them but they took big hits recently, they have formed a chaotic bearish pattern which is the measured bearish move and it has a bearish price channel and as I type this TSLA went down 3% more hehe.

<http://prntscr.com/63z5o7>

TWTR ( Twitter )

People estimated twitter's earnings to be bad-average and it went down 5% a few seconds before the actual earnings report , BUT! everyone were surprised when TWTR beat the estimations and earnings were good ( although the amount of online users and users in general still not impressive ) , for now they're just filled the gap down and they should head to 50 area in my opinion.

<http://prntscr.com/63z9g1>

Your stocks are welcome .

FB ( Facebook )

Facebook has been in somekind of a down trend for the last three months , but there are some good news, the bears are showing weakness and there is extra demand for the past month and half, my prediction is.. it would form a flag, at the point where there are two lines , it most of the chances would go up but it can go both ways.. you should wait for a confirmation if it breakouts the red lines you should consider selling / buying / shorting it if stays there.

( The breakout may happen before the last red arrow)

<http://prntscr.com/64e2zt>

GLW ( Corning Inc )

GLW looks very strong, their money flow is great. At the pitchfork area it tested support two times and went back up , also tested resistance in the inner pintchfork ( The green area) three times and confirmed it as a soild resistance of the uptrend, the bulls should keep winning on this one for the time being.

<http://prntscr.com/64e79x>

EMES ( Emerge Energy Services LP )

It had a huge down trend but for the last couple of months the bulls have shown strength, the selling force shows weakness and a reversal might happen, most likely it's gonna be a reversal for the bulls force but until a confirmation we shouldnt jump to conclusions.

<http://prntscr.com/64ednn>

BABA  
( Alibaba )

BABA had a nice run after its IPO then it sharply crashed to 80 area but there are decent bullish signs that it might reverse, nothing is confirmed yet but the signs are really great, if it gets to the black line in the chart it would reverse a bit / a lot most likely.

<http://prntscr.com/64ms7c>

<http://prntscr.com/64mv9e>

<http://prntscr.com/64mygi>

INTC ( Intel )

Intel had a long uptrend and then it gapped down.

It tested support three times and confirmed the support level, after the third confirmation looks like it's going to fill the gap from january.

<http://prntscr.com/64n2jl>

GOOG ( Google )

Google reversed from a nice uptrend to a down trend around mid september, it advanced down sharply first but then the selling pressure has weakened and the buying pressure got stronger. You can see how google tried to get out of the pitchfork twice ( Purple arrows ) but failed, the blue one confirmed totally the support and then it has surged up. Google has shown nice bullish strength and it should head up in my opinion.

<http://prntscr.com/64onra>

MSFT ( Microsoft )

Well Microsoft has a nice uptrend at some point but as soon as the uptrend's angel advanced up it formed the Bump And Run pattern ( you should worry when it happens if you hold long term / and happy if you wanna short ), you can see the red line and arrow pointing for the crossover( which is bearish in our case ) a bit before the storm, there was enough space for the traders to sell their shares or short.

In the present microsoft has formed two big green candles and it might reverse but I wouldn't get in yet but wait for some confirmation.

I'm new to stock trading, can you elaborate a bit more on your AAPL analysis.

**NZT** - February 11, 2015, 3:16 pm

Yeah. I'd also love to hear some analysis to go with these charts and explain your TA.

Purefication has my vouch.

He is a solid student and has been working hard and learning a ton, never hesitating to ask me questions or for pointers on technical analysis. His charting is on point and he has a better eye for patterns than almost anyone I know

Don't hesitate to ask him for chart analysis anytime.

Nice charts man. Doing better. This guy will someday be a millionaire.

**DuguWudi** - February 13, 2015, 3:12 am

Alibaba, Apple, Intel, Samsung please?

Thank you very much.

Apple = APPL it's already there.

Samsung is not on the US market as far as I know .. never seen it.

I added Alibaba and Intel.

Sorry, my mistake?, Im mostly interested in tech stuff, such as Microsoft and Google?

Thank you.

And I think a simple short note for those short form stock names would be a nice feature.

**Purefication** - February 15, 2015, 11:29 am

UPDATE: EXXI surged 10%+ up today , if it somehow stays at this area and holds about the resistance it might be a good bullish swing ( for those who have missed the party today )

UPDATE 2: Added Microsoft and Google and added the full name of the companies.

Feel Free To Ask Your Stocks !

**Astral™** - February 16, 2015, 3:02 pm

Holding quite a bit of EXXI, hoping for the best on this one.

How can we trust you OP... that rep?

**Enronitis** - February 22, 2015, 8:51 am

(Feb 21, 2015 10:41 PM)Franklin Hatchett Wrote: [\[CITE\]](#) How can we trust you OP... that rep?

Rep has nothing to do with one's abilities/skills. It's ridiculous that you're even bringing that up frankly.

I've already personally vouched for this member and his charting abilities. He's learned some of his stuff from me and the rest through self-study.

If you don't want to "trust" him or his charts because of his rep, go do them yourself. ?

**Purefication** - February 22, 2015, 8:59 am

(Feb 21, 2015 10:41 PM)Franklin Hatchett Wrote: [\[CITE\]](#) How can we trust you OP... that rep?

I dont even know what it has to do with anything but I was " rep fucked " for an unknown reason .

But can you please tell me.. I am dying to know what it has to do with trust ? you can check each chart of mine which most of them were posted 10 days ago + AND TO COMPARE THEM to the current price of each stock and to notice they're all up.

Seriously minimum IQ...

**Franklin Hatchett** - February 22, 2015, 2:54 pm

Rep is there for the purpose of trust, all good though ill give you the benefit of the doubt ?

Yes, but there's nothing to trust here.

OP isn't selling anything, isn't asking for anything, he's providing chart analysis of asked stocks. You can take the charts, or you can not. Just there for information.

If I had lets say 4k and I wanted to make triple within 2-3 years, where would I go with it.

I cant really answer that because 2-3 years is a long time and I cant predict what is gonna happen for a stock in 2 3 years.. but invest in a company you believe that would last and do well in 2 3 years..

Hey man, I have been holding on to 100 shares of EA since last June. I went in at 36.50, and its up to around \$55 now. Im trying to hold out till this coming June for tax reasons, but the market in

general does not look the best right now. Should I take my money and run and pay the bigger tax or try and hold out until June and pay the smaller tax? Ill be making money either way, it would just be better if I could hold on till June, but I am afraid its gonna take a big hit before then. Curious to see what you say! Thanks -illinifan

<http://prntscr.com/6hcfve> I am bullish on EA and I highly suggest you to hold , if it gets to the red line ( and actually closes below it not just touch it here and there , then you can take your profits ) You should hold for now.
