Thread: [VB.Net UDP / SYN / HTTP flood scripts](#)

NotYellow - February 12, 2015, 5:54 am

I have some old dos scripts found that I no longer use, and I thought that you can use it well.

Explanation:

UDP -> Floods victim with packets forcing them offline / Good for home connections and shitty servers!

SYN -> Sends syn requests to server!

HTTP -> send http requests flood webserver

Source codes:

UDP -> [pastebin . com / fwVkB8Tx](#)

SYN -> [pastebin . com / UWy12xL7](#)

HTTP -> [pastebin . com / c5bndMFG](#)

I hope you can learn something out of these codes!

I see you have tofx's syn function in there

These are a little old now ~2010

?Dødøsky - February 12, 2015, 12:46 pm

why just copy and paste? i know it's coding section and everything is accepted but in my opinion would be more useful even a really simple tutorial but good explained

BubbleDoo - February 12, 2015, 2:02 pm

Atleast it's not a ping command, lel.

Odus - February 12, 2015, 2:53 pm

Always give credit, no matter how old the sources. In this case, all 3 of which are from [tofx](#) - a user here on this very forum.

UDP: <https://hackforums.net/showthread.php?tid=273739>

SYN: <https://hackforums.net/showthread.php?tid=234538>

HTTP: <https://hackforums.net/showthread.php?tid=273767>

Tylerthething1234 - May 24, 2017, 4:05 pm

Do these attacks still work?

Barret - May 25, 2017, 7:18 am

That is a bunch of crap. This will most likely only flood yourself if any.

Bad thread handling, SYN attack? that code does not do any kind of syn attack at all, the idea behind SYN is to never send the ACK packet so the server socket is left in a open state, leaving open state sockets that need time before reused again which can result in denial of service, pretty much what slowloris does difference is slowloris goes for memory usage and keeping service sockets open as much as possible until the service is on the edge of no more memory for new sockets.

The http attack, wtf is that even suppose to do, it doesn't do jack shit, i see open Try blocks with no catch at all, whoever made this, shame on you.

if you looking for real script attack, i think you should read/learn and make it urself.
