Thread: [\[Bored\] Give me something to code](#)

itzseanprox - February 12, 2015, 11:26 am

I want to code something but I don't have any ideas.

It has to be something fun and not too complicated, that being said, I do like a challenge!

Will help code your projects if you wish.

Ninja - February 12, 2015, 11:41 am

Threaded proxy scraper. Its fun to learn using regular expressions if you arent that familiar with it already.

zeroexp - February 12, 2015, 11:44 am

Code a application that is mainly used for checking accounts. For instance you input the account name and a list of passwords and the program tries every one until it finds the good password.

Code is to work for almost every site. Customizable and stuff ^_^

Use a POST request, NOT a WebBrowser.

itzseanprox - February 12, 2015, 12:13 pm

Use a POST request, NOT a WebBrowser.

So a brute force application, that is too easy. You mean use a http webrequest to send a post?

What is the point in trying to find out the password for one user, not knowing if that user even exists for the site?

I like the idea of a proxy scrapper! Going to start on that now, I have used regex a lot but this will still be interesting.

Thanks

tyxik - February 12, 2015, 12:17 pm

make a application with a button "Black out this city"

#lol

granger - February 12, 2015, 12:23 pm

Not sure why we would reinvent the wheel here. This is what burpsuite is for. You take can stop a

request, throw it over to intruder, mark your variables and start the process. Then you can just pipe in username and password lists. Then all you have to do is compare a valid login to an invalid login.

If you'd like, I can show you how this works.

Young Gerald - February 12, 2015, 12:27 pm

Ya just do an account checker that works for any site.

Odus - February 12, 2015, 12:35 pm

Work your way through this:

<http://www.dreamincode.net/forums/topic/78802-martyr2s-mega-project-ideas-list/>

You'll be occupied for hours on end.

Hiiro - February 12, 2015, 12:42 pm

Something I was working on but I got bored and never finished it.

Image ([Click to View](#))

Have it organize chosen file extension types from a directory into new directories.

itzseanprox - February 12, 2015, 6:08 pm

Looks interesting, do you mind sending me the source?

Hiiro - February 13, 2015, 1:28 am

(Feb 12, 2015 07:20 PM)| Hex | Wrote: [\[CITE\]](#) then it defeats the purpose of wanting to code.....This, also I only wrote the file browsing and the file extension managing;
I hadn't yet to write folder saving and organizing yet.

FRANKIE - February 13, 2015, 1:29 am

Make a simple proxy scraper. I have been trying to find a something lightweight for a while now.

Ninja - February 13, 2015, 3:42 am

Try improving stuff you arent that good at, like scraping, using regular expressions, webrequests, make a file manager, file converter, image editing software (might be too complicated, I dont know how skilled you are), etc. Just look at software you have on your PC and make another (simpler) version of it.

itzseanprox - February 13, 2015, 11:08 am

Hex, If you actually read my original post I said I would also help with projects, Austrix said he had a project he never finished, so I was going to add to it..... Why reinvent the wheel?

I am currently doing a proxy scrapper, I am a C# developer for a company doing big projects, so I have a very good understanding of the .NET framework.

I am going to broaden my knowledge on reflection after the proxy scraper.

nathan72389 - February 13, 2015, 2:52 pm
i need some ideas...

.....

..
....

can you give me the source

...
...
.
...
.
.

hey, how about you go fuck yourself.

zeroexp - February 13, 2015, 3:18 pm
bro, every time someone gives you a fairly easy idea you say "why reinvent the wheel". you realise a lot of things have already been done, right? if you want to practice go for the ideas we suggested, if not, think for yourself if you want something unique. looks like you don't even know how to do those basic things...

You clearly did not read the post above you, you also clearly did not read my thread properly.

I don't want to practice anything, I was simply bored and wanted to code something different.

Swagip - February 14, 2015, 2:18 pm

Try making a REALLY basic rat. Lmk if you need any help.

GenericSkid - February 14, 2015, 6:37 pm

Oh, reading this thread reminded me of a project I planned on doing.

Have the user select a directory and the program will check for possible duplicate images / files. When it's done present the user with the list of selected duplicates. For images, have it automatically prompt the user to delete the lower resolution image.

Another feature would possibly be a visual sorting system for moving images between folders easily. This would be great for sorting my porn folders!

cyber-sin - February 19, 2015, 10:07 pm

hay dude i am doing a project vb.net and i need help i am searching on it if u could help me it will be grant for me :)
